prise, and this "Extra Number" of that

J. N. MATTHEWS,

Editor and Proprietor,

ture, for these papers, should be addressed to

In short, not to multiply words, our purpose was to make this "Extra Number" worthy not only of this auspicious occasion - for we said we regarded the coming International Industrial Fair as the most important and promising event in this city's history — but worthy also of Buffalo and THE EXPRESS. And, least all of that?

Of course the work is not perfect, but we did not promise perfection. THE EXPRESS has never hoped to reach that point in anything. But whatever shortcomings may be observed, we know that they are due to none on our part.

We hoped it would contain "an illustrated description of every important bustwo months have passed since the inde- Many old and very important industrial fatigable young manager of the Interna- concerns have no representation whatever tional Industrial Fair undertook to enlist in the following pictorial pages. But who the sympathy and active efforts of THE is to blame? Not THE EXPRESS. If they EXPRESS in behalf of that great enter- would not we could not.

Also we said it would not be our fault newspaper is the first fruit of what he if the "Extra Number" did not give "an feared would prove a hopeless under- excellent portrait of every representative taking. His words were not wasted. We business-man in the city." It does give determined instantly to make the Fair an a great many - 208, almost an unexpected occasion for showing what THE EXPRESS | display - but many more are absent and could do when put to its trumps, so to some are conspicuously so. But you canspeak, and especially when there was op- not take every representative businessportunity for promoting the honor and man by the scruff of the neck and compel glory and prosperity of the City of Buffalo. him to have his picture taken. Energetic Hence this "Souvenir." When this reso- measures have been in vogue all through lution was so suddenly arrived at, there the preparation of this work, but everywas not a stick of material at hand with thing has been done decently and in

The announcement of his engagement was dated July 21st. If any man ever did more hard literary work than Mr. CRANDALL has rushed out in the form of "copy" and "proof" between that date and this -September 1st-we should be glad to make his acquaintance. Glutton for editorial work that Mr. CRANDALL is known to be, we think he must have had his fill of it in these six weeks.

Not often has so elaborate a piece of historical writing been undertaken on so short a notice and with so brief a time of men. for its accomplishment as the History of Buffalo was undertaken by Mr. ALLEN G. BIGELOW and Mr. JOSEPHUS N. LAR-NED. Still less often has so excellent a work been produced under such adverse conditions. Upon Mr. BIGELOW fell the chief burden of research and composition, Mr. LARNED contributing invaluable to these gentlemen to say that the limits of space to which they were confined prevented their treatment of the more recent periods of the city's history with the picturesque and graphic minuteness which make the chapters devoted to our strictly historic age as glowing and absorbing as a romance. The opportunity should be given them to complete their most excellent History on the same scale upon which it was begun. It is altogether probable that such an opportunity will be

found at no very distant day. All readers of the Souvenir, we take no risk in saying, will join us in thanking his assistant, who have taken care of the abandon their singularity. attractions combined ought to convince schools of this bountiful country, and have all organized National bodies that if they earned their own bread in the sweat of wish comfort and pleasure to mark their their brows from days long preceding annual or biennial or triennial or quadriennial gatherings, Buffalo is the place to hold them.

"LINKED SWEETNESS, LONG DRAWN OUT."

THE EXPRESS is by some singular the binding department, Mr. CHARLES critical, and at times even censorious. E. AUSTIN, business manager of THE We ask these singular people to read the

If THE EXPRESS had been as censori--to each and all of them alike he feels ous as Cato the Censor himself, surely under deep personal obligation for their this number would make amends for all admirable and successful efforts to make that might have gone before. Here every himself or itself, or has been celebrated by friendly pens and pencils, to his heart's full content. Here the bright side, the good side, the handsome side, of everybody and everything has been shown. If there is a dark side or a bad side, this is not the place to show it. This is a lovefeast, a feast of fat things, a feast at which no skeleton sits.

But because in this Souvenir Number we find only good in everything, it does not follow that there has been any falsehood or misrepresentation. It only shows that everybody and everything has his or its good side, and that the color of a description depends largely on the point of chosen the favorable point of view, and told everybody's story as everybody likes to have it told. The result is pleasing to all whose story is told, and it ought not to be displeasing to any reader, for it is good occasionally to think well of the world and its inhabitants, and especially that part of it and them with which we are brought most closely in contact. It will do every man good to see the best points of his neighbor's character and achievements and belongings brought out, and to learn to think better of them all than he had been inclined to do. It will do us all good to talk well and think well of each

Wherefore this "Extra Number" of THE EXPRESS, with its great store of sweet sayings, may be a wholesome and conserving influence in the community.

> It is probable that in every other American city there would be found an equally large proportion of "self-made men," and in nine cases out of ten their history would refute the sneer of an English cynic that "a self-made man is almost sure to be a very bad job." What a monumental tribute to American institutions such a

graving, Mr. HENRY STRAUB, head of people looked upon as inclined to be biographical gallery as the present one is! - what an evidence of their fairness, their equality, their justice! Here industry, EXPRESS, and Mr. W. R. RAMSDELL, present "Extra Number," and forever after integrity, and intelligence do not need to be backed by wealth and rank and influence to enable them to reap their due reward. Here no man is ashamed to have it known that he sprang from the loins of the common people. It is an added crown to have it known that he has won his way by his own hand, and owes noth-

ing to the adventitious accident of birth. While the story of the successful men of our day is being told in this "Extra Number," we may be sure that on a thousand farms, in a thousand frugal homes of poverty and toil, in a thousand common schools, there are to-day being trained the boys who in the next generation will repeat the triumphs of the "self-made men" of 1888. American institutions have not lost their vitality. What they have done for the men of past and presthat there are two sides to every story- ent generations they will do for those of the future. There is noble inspiration for American youth in every column of the biographical pages of this Souvenir of the view. In the Souvenir Number we have first great International Industrial Fair at

HARPER'S WEEKLY.

For the fine engraving on page 57, showing Main Street as seen from the Lyon Elevator, the publisher of this "Extra Number" is indebted to the generous courtesy of Messrs. HARPER & BROTHERS, New-York. It was first seen in Harper's Weekly, of August 18, 1888, in a very attractive illustrated paper on the City of Buffalo and the International Fair. In response to our application for terms upon which we could reproduce the picture for this purpose, the great publishers not only granted the desired permission promptly and without charge, but also sent on a duplicate electrotype of the engraving-free!

This is a most liberal and unusual proceeding. The favor is highly appreciated, of course, but we did not expect it to Buffalo's people and Buffalo's visitors come in such an unquestionable shape.

The interest taken in the Fair by and the Exhibition, was timely and im-The oil refineries, the glucose works, mensely valuable, for the Weekly has an

CHAPTER I.

AGO - THE FIRST WHITE MEN - THE GRIFFIN-THE SONG AND THE SALUTE

as lively a view of this event as consists dim prophesy would astonish the prophet with truth, and paint the picture in colors | could he retrace his steps to-day!

Gathered upon the bluff now crowned by the sunken ruins of Fort Porter a group of Indians gaze with taciturn interest upon the scene. Before them the broad expanse of Lake Erie shimmers in the summer sun. To the left its southern shore sweeps away in an extended curve that is lost in the distant blueness of the Chautauqua hills. On the right the rapid current of Niagara, breaking sudenly from Erie's grasp, hastens northward to fling itself over yonder cliff and sleep for a time in the pacific embrace of Ontario. The opposite shore of the river, wooded to its very brink, spreads toward the West in a limitless plain of dense forest. Behind the red-skinned spectators an elevated plateau, covered, like all the other land in sight, with primeval forest, lies waiting for the ax, not yet forged, that shall open the first gap in those virgin woods whose half-dozen remaining trees now stand in the midst of a

General of Canada.

The romantic story of the building of yonder staunch little vessel is not a part of the present narrative. The Indians assembled to witness the unusual spectacle know its history, and have played an important part in the drama of "the building of the Griffin," which immortalized La Salle. Their jealous opposition was with difficulty overcome sufficiently to permit the explorer to lay her keel, and now, though their wonder at this new and strange vessel breaks forth in loud cries, it is mingled with a distrust not begotten of experience but justified by their later history.

Before he arrived there,

The State's answer to this last appeal of Hartford in December, 1786, had given to and jurisdiction over all the territory west of the present eastern boundary of that State; while Massachusetts retained the ing through Seneca Lake, except a mile strip along the eastern bank of Niagara River from Lake Ontario to the mouth of This mile strip therefore superseded the United States four-mile reserve of 1784.

The final extinguishment of the Indian title to the mile strip by treaty in 1802 will be mentioned in its proper place.

This satisfied the Indians for a time. But soon a fresh disturbance arose. Two organizations known as the "New-York and ara Genesee Land Company" endeavored to secure control of the Indian possessions in this State. The New-York company was managed by Dr. Caleb Benton, John Livingston, and Jared Coffin, while the representatives of the Niagara company were Col. John Butler, Samuel Street, Capt. Powell, William Johnson, a Mr. Murphy, and Benjamin Barton. These companies made desperate efforts, by influence with the Indians, and through the Legislature, to secure a lease for nine hundred and ninety-nine years of all their lands except some small reservations. Indeed, such a lease was obtained for the New-York company, but the Legislature refused to recognize the claim, the Governor being empowered to use the State forces to protect the Indians from white intrusion or settlement upon these leased lands.

These troubles led to an important conference on Buffalo Creek in May, 1788. Col. Butler was present, and James Dean, interpreter for Livingstone and Schuyler at Albany, delivered speeches prepared by them. A reply written by Stevens, son of the British interpreter at Fort Niagara, is dated "Buffalo Creek, 14th May, 1788." It was entirely loyal to the State and unfavorable to the lessees of the lands.

The thirst for Indian lands grew rapidly. Messrs. Oliver Phelps and Nathaniel Gorham, not successful in buying lands in the Genesee country, were joined by other would-be purchasers, who made Phelps and Gorham their agents. The combination offered to pay \$1,000,000 in Massachusetts paper currency (then worth only 50 cents) for all the lands controlled by that State in New-York. The proposition was acceded to, and Gen. Israel Chapin was 'appointed to explore the country. Mr. Phelps made an arrangement with the two defeated land companies which he supposed was satisfactory. But the latter fomented discontent among the Indians, until, in order to untangle the conflicting interests, another council became necessary.

This important meeting occurred at Buffalo Creek on July 4, 1788—a century ago. Beside the Senecas it was attended by chiefs of the Onondagas, Cayugas, and Mohawks. Rev. Samuel Kirkland and Elisha Lee of Boston, represented Massachusetts; Col. John Butler, Capt. Joseph Brant (Thayendenegea), and Samuel Street appeared for the Niagara-Genesee Company; and John Livingston, Caleb Benton, and Ezekiel Gilbert for the New-York Genesee Company. The interpreters were James Dean, Joseph Smith, William Johnson, and Mr. Kirkland. Several British officers from Fort Niagara were also present.

The negotiations lasted several days, and were kind and conciliatory in manner. The Senecas finally agreed to sell the immense tract known as the Phelps and Gorham Purchase for \$5,000 in cash and \$500 annually forever. Phelps and Gorham soon soon formed a part of the heterogeneous Lake Ontario, continuing four miles east of disposed of about 30 townships, in small parcels, themselves retaining the larger part of their purchase. But the funding of frontier settlement. The hatching of the mile-strip was thus ceded to the general the public debt of the States by the Federal Government enhanced the value of the State debt nearly to par, and being unable to buy the Massachusetts currency at a large discount, as they had expected, Phelps and Gorham were compelled, in 1789, to ask that Legislature for a release from so much of their obligation as related to lands not included in the treaty. This was done, and a ready purchaser of these released lands was found in the great financier of the Revolution, Robert Morris of Philadelphia This gentleman thus became the owner o. the entire site of Buffalo.

Mr. Morris did not long continue to possess the land on which we now live. An association of thrifty Netherlanders sough: to secure a part of the recent valuable acquisition from the Indians. But, as aliens could not hold real estate here in their own names, Herman Leroy and others bought of Mr. Morris, for the association commonly known as the Holland Land Company, since so celebrated, four tracts, described in as many deeds. The Indian title to these lands was finally extinguished in 1797, at a council at Geneseo, and the ownership of the site of Buffalo passed practically to Holland. Eleven reservations, in all some 338 square miles, scattered through the State, were all that remained to the remnant of the Iroquois Confederation of their once magnificent possessions on this continent.

great and growing city.

But nothing of all this work of nature has drawn together those dusky beholders on the river bluff, or now engages their wondering attention. At their very feet, hugging the low shore below the cliff, a great white-winged canoe breasts the current between Squaw Island and the mainland. There is a strong northeast wind, but it cannot force the vessel onward against that heavy tide without aid. And so, on the low river-beach, a dozen bronzed French mariners, with a tow-line drawn over their shoulders, lean heavily forward and toil along, hauling their little ship toward the wide lake on which their impatient eyes are fixed. They are followed by others sent ashore to lighten the vessel; for her company numbers four-and-thirty men, including the Franciscan, Father Hennepin. She is full rigged, and has an armament of seven cannon, her crew carrying antique muskets. From her masthead floats a flag emblazoned with an eagle, and her figure-head is a carved griffin, the heraldic device of Count Frontenac, Governor-

Suddenly the tow-line slackens and a shout from the sailors on the shore announces that the current is overcome and the Griffin can henceforth fly with her own wings. Their standing hardly be called settlers. Forcibly detained learned research and grave discussion has remnant of Gen. Sullivan's disheartened the first opportunity. But soon after the sufficient to provide for themselves.

Indians, agree that before he was driven to his family, including his daughter and her and Rome.

President Washington, was on his way to Buffalo Creek, whither he had summoned the chiefs of the Iroquois to a general Council. Being the bearer of letters from the President, the Secretary of War, and the Governor of Pennsylvania, Col. Proctor at once sent word to Young King, Farmer's Brother, and Red Jacket, chiefs and sachems of the Senecas, at Buffalo Creek, that he would be present at the Council called by Cornplanter, and pushed on thither in the trail of the runner who bore his message.

On April 8th, Col. Proctor was joined at French Creek by Cornplanter himself and the chiefs who had accompanied him to Philadelphia. A conference was held, the Colonel presenting the communications This drawing, made in 1793, survived the from the Government in the presence of an assembly of about one hundred and seventy persons, mostly Indians.

chiefs and warriors be appointed to accompany him to Buffalo Creek. The party left French Creek on the 10th, and reached Lake Erie, about five miles west of Buffalo, on the 26th.

A large number of Indians were assembled in the Buffalo Creek settlement to receive Col. Proctor's embassy. They were met at the principal hut by Young King, arrayed cannoneer wisely stood inside the Council- less and somewhat fretful, with new buildhouse door and touched it off with a long stick. The discharge upset the gun and wrecked the carriage. This noisy courtesy having been extended, the Council came to order within. Red Jacket, the great orator of the Senecas, whose bones, after years of post-mortem restlessness, now lie in Forest Lawn on the banks of Conjockety Creek, made the address of welcome, presenting Col. Proctor with four strings of wampum.

The negotiations at this Council continued till May 21st, being much retarded by the interference of Brant and the British, who exercised a strong influence over the Indians, and without whose acquiescence they would not act. But at last, having been measurably successful in securing a peaceful treaty, Col. Proctor proceeded to Pittsburg on a similar errand.

While at Buffalo Creek the embassy had occasion to purchase supplies. These were obtained of Cornelius Winney (Winnie or Winne), the first pure white man to build in the settlement. Winney's store was a log building on the north bank of Little Buffalo Creek, in rear of the present Mansion-House site, near the corner of Washington and Quay streets. It was hardly better than the Indian huts among which it stood, but its distinction as the residence and business-place of the first white Buffalonian can never be overshadowed by the grander buildings which have obliterated it. Winney was an Albany trader from "The Fishkills," and had for a partner Capt. Powell of the British army, stationed at Fort Niagara, who exercised great influence among the Indians and was prominent at the treaty we have just mentioned. The house and store still stood after the advent of the Holland Land Company in 1802. Winney is supposed to have left Buffalo Creek about 1798.

But a permanent peace seems not to have been effected by Col. Proctor in 1791. For two years later, on the 19th of February, 1793, President Washington sent a message to Congress stating that "it has been agreed on the part of the United States that a treaty or conference shall be held the ensuing season with the hostile Indians northwest of the Ohio, in order to remove, it possible, all causes of difference, and to establish a solid peace with them." Congress appropriated a sum "not exceeding \$100,000" for the expenses of this treaty Its importance is shown in a letter from Washington to Jefferson, dated March 22d, in which he speaks of the proposed treaty as "being of great moment to the interests. and peace of this country."

As suitable commissioners to represent the United States, President Washington appointed Charles Carroll of Carrollton and Charles Thompson. But these gentlemen declining the arduous and perhaps dangerous task, Gen. Benjamin Lincoln, Beverley Randolph, and Col. Timothy Pickering were named and duly confirmed by the Senate. Gen. Lincoln's journal of his journey to brated with as much pomp as cir- hundred years ago. cumstances would permit. On the Terrace bank, near the foot

bank all the way from La Salle to Schlosser? On the 11th of June the Commissioners rowed up Buffalo Creek to the spot appointed for the Council. About eighty of the Senecas, being under arms, fired a salute of welcome. After the chiefs aud sachems had assembled at the Councilhouse and deliberated for a time, General Lincoln and his companions, among whom were General Chapin, explorer for the Holland Land Company, and officers in the British regiments, were invited to enter, and the Council began the usual formalities.

Perhaps the most interesting of the illustrations which accompany this narrative is the outline group of this Council, sketched by a young British officer on the spot. fortunes of an army officer's life, and was given by the artist to a friend at Gibraltar, whence in April, 1819, it found its way into Col. Proctor then asked that several the collections of the Massachusetts Historical Society, of which Gen. Lincoln was an active member. It is the earliest known picture relating to the site of Buffalo, and the principal faces in it are portraits, as in-

of Pearl Street, was a little cleared spot of grassy land, where the Indians were wont to lie in lazy luxury and gaze off over the fair prospect of lake and river and forest. The road from Buffalo Creek to Black Rock Ferry was along the river beach below the bluff which LaSalle's sailors had used as a tow-path in 1679. A stage road from Batavia narrowly missed reaching Buffalo Creek, but not being able to see it for the woods, turned off along the York Street ridge, passed near the site of the Church of the Holy Angels on Porter Avenue, crossed the ground now occupied by the reservoir, and went down a dug-way just above the present Niagara Street railroad barns to the old Black Rock Ferry. A few huts here and there, down near the two creeks, and some intersecting paths, trodden more by moccasins than by shoes, formed the settle-

Winney's house, as we have seen, was standing, in 1792, on Little Buffalo Creek (now Hamburg Canal), south of the Mansion House site. William Johnson's residence must have been a sort of manor house, for it was half frame. It stood a little east of the present main building of the Mansion House. Michael Middaugh, a Mohawk River Dutchman, and Ezekiel Lane, his son-in-law, had built a double log house upon land belonging to Johnson a little east of Washington and north of Exchange Street, which they gave up to the Holland Land Company's surveyors in 1798, and thence moved into a hut on "the island" west of the foot of Main Street, where Middaugh died in 1825. Lane's descendants had a long contest with Mr.

cided against the heirs. Before 1795 John Palmer built a twostory log house on the Terrace nearly opposite Exchange Street and a few rods West of Main. It stood upon land owned by William Johnson, and is noteworthy as BUILDING THE VILLAGE - EARLY SETTLERS the first tavern opened in Buffalo. And it entertained at least one distinguished guest who has born testimony to its primitive character. The Duke de Rochefocauld Liancourt arrived at Palmer's tavern in 1795, and "after a very indifferent supper," he and his party were "obliged to lie upon the floor in their clothes. There was literally nothing in the house; neither furniture, rum, candles, nor milk. After much trouble the milk was obtained from the neighbors"—there were neighbors—"who were not so accommodating in the way of rum and candles." Despite these disadvantages his Grace found his apartment in the hostel of John Palmer at least as good as the wilderness, for he adds "we slept as soundly as we had done in the woods." About twenty rods north of Exchange Street, on the west side of Main, in a log building, was Maybee's Indian store, where the red men from the neighboring reservation might buy supplies, from glass beads to glasses of rum. Beyond Palmer's tavern, on the Terrace, west of the old Police Headquarters, Asa Ransom's log house looked out over the lake and river. William Robbins, a blacksmith, occupied another log hut, whose location is uncertain. Beside these scattered dwellings nothing

is recorded in the way of habitations. There may have been others, but here were certainly enough neighbors of whom milk might be borrowed, and, had there been twice as many, mine host Palmer would still probably have failed to negotiate the loan of enough rum and candles to satisfy the "traveling public" of even his day. Such was the Buffalo upon which the nineteenth century opened its eyes.

Reference has already been made to what is generally known as the "Holland Land Company." It is proper at this point to explain more fully what was meant by this

No such corporation ever had legal existto indicate that such an association ever was formally organized, even in Holland. As related in another chapter, certain Dutch capitalists desired to purchase Indian lands in this State, bought by Robert Morris Mr. Morris conveyed four tracts of land, by as many deeds, to four groups of persons living in this country, the funds being furnished by the Netherland capitalists, for

tracts already mentioned, appear to have by his descendants.

been used solely for brevity and convenience. There may have been a "Holland Company" in the Netherlands, but it never appeared as a land-owner in this country. Following the convenient custom, however, we shall continue to use the name as it has been employed for nearly a century, to designate the Dutch owners of lands in this

The "General Agent" of the Holland Company, a sort of managing director, resided in Philadelphia, where the general office of the Company was established. The "Local" or "Resident Agent" was posted at Batavia, which took its name from its Dutch antecedents. Prior to 1800 Theophilus Cazenove was the General Agent; he was followed by Paul Busti, who served for twenty-four years, being succeeded in 1824 by John J. Vanderkemp, who held the office until the affairs of the Company were wound up, after the sale of its last piece of property. There were four successive Local Agents at Batavia during this period, who served in the following order: Joseph Ellicott, 1800 to 1821; Jacob S. Otto, 1821 to 1827; David E. Evans, 1827 to 1837; Peter Van Hall, 1837 to the close of the company's business.

This history cannot include a biography of each prominent pioneer of Buffalo. Such sketches are interesting principally to limited circles of readers, while to do justice to them would occupy all the space allotted to the history itself. This is a narrative of events, biography being merely incidental to a clear understanding of those events. But that the influences which have made Buffalo what it is, and which directed the course of its history and gave it its distinctive characteristics, may be understood, the lives of a few men must be more amply dealt with than can be done with the mass of our early settlers.

These remarks will account for the absence of the many personal anecdotes and reminiscences so common in pioneer writings, and the presence of the few biographical notices actually presented.

The agents of the Holland Land Company deserve especial attention. They planned the site, furnished the titles, secured desirable settlers, and in a large measure molded the plastic village from which the present city has taken much of its individuality. Of Theophilus Cazenove, the first of the

negotiated nearly all the preliminary proceedings connected with the immense purchases made of Mr. Morris. The surveys of the Purchase began under his auspices, and his name appears as the originator of much of the best work of the Company. He returned to Europe in 1799, residing successively in London and in Paris, where he died. A lovely village bears his name. His successor in 1800 was Paul Busti, who, born at Milan, in 1749, and educated in Italy, entered the counting-house of an uncle in Amsterdam, prospered, married, and was respected for his business talents and integrity. When about to retire from active pursuits Mr. Busti was induced to assume the General Agency of the Holland Company, and emigrated to Philadelphia, where he directed the Company's affairs until his death, July 23, 1824. He began his duties before the surveys were finished, and was active in promoting settlements. His name was given to a street and a ter-

falo Creek, but survives to-day only as the title of a township in Chautauqua County. The third and last of the General Agents, John J. Vanderkemp, succeeded Mr. Busti in 1824. A native of Leyden, he came to America with his parents in 1788, settling near Esopus in Ulster County. In 1794 the family removed to the shore of Oneida Lake, and soon to Oldenbarnevelt, now Trenton, Oneida County. Here they lived on intimate terms with the old Dutch family of Mappa, descendants of whom are among the older residents of Buffalo to-day. In 1804 Mr. Vanderkemp became a clerk in the service of the Holland Company, and was thus connected with its affairs for a longer period than either of his predecessors. His father, Francis Adrian Vanderkemp, LL.D., was a traveled man of wide reading and genuine culture. His correspondence and other writings evince powers of close observation, a delicate fancy, and a sense of humor which stamp his mind as of a high order. DeWitt Clinton wrote of him in 1820: "I have found the wisest man in America," and the story of that discovery, told in Volume II. of the Buffalo Historical Society's papers, is as charming as a page from Izaak Walton. Among the richest treasures of the Historical Society is a collection of letters from the older Vanderkemp to Col. Mappa, forming a journal of a tour through this State in 1792, and wherein the possibility of a canal, with the best route, feeders, etc., is set forth with more than prophetic accuracy. The younger Vanderkemp seems to have inherited from his father many of his most estimable qualities. He was a fitting third in the trio of General Agents of the Holland Land Company.

Such were the foster-fathers of Buffalo. Instead of being backwoodsmen, these gentlemen were the product of liberal education and cultured associations. The character of their Local Agents, and of those who came to Buffalo under their auspices, was of a high order, and those early influences not only have not ceased, but have developed with the growth of Buffalo, and to-day qualify the social and commercial life of the city.

FIRST SCHOOL HOUSE IN BUFFALO - WHO BUILT IT, TAUGHT IN IT, ATTENDED IT, AND PAID FOR IT - DR. CYRENIUS CHAPIN - AN ATTEMPT TO BUY BUFFALO.

IKE true Americans, one of the first movements of the settlers after the new century opened, was the establishment of a school. A brother of Mine Host Palmer, who boarded at his "hotel," wrote the following letter to Joseph Ellicott at Batavia:

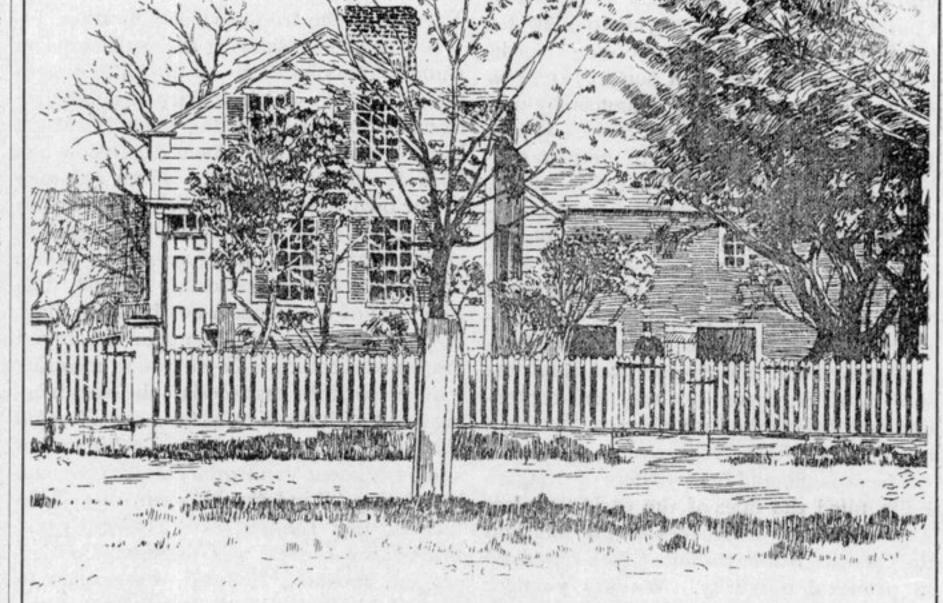

BUFFALO, 11 August, 1801. SIR:-The inhabitants of this place would take it as a particular favor if you would grant them the liberty of raising a school house on a lot in any part of this town, as the New-York Missionary Society have been so good as to furnish them with a school-master, clear of any expense, except boarding and finding him a school house-if you will be so good as to grant them this favor, which they will take as a par-

ticular mark of esteem. By request of the inhabitants.

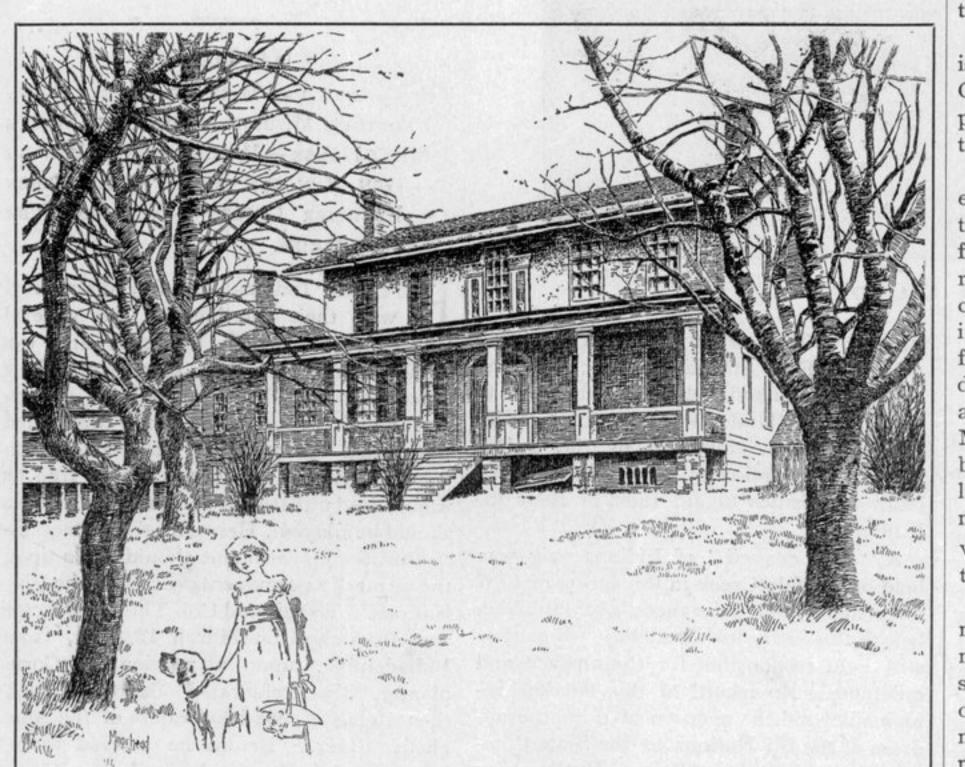

Jos. R. PALMER. Jos. Ellicott, Esq. N. B —Your answer to this would be very acceptable, as they have the timber ready to hew

The "inhabitants" were not disappointed, Mr. Ellicott's active life closed with the nor did their timber wait long for the hewyear 1824, and the shadow which darkened ing. Within three days Mr. Ellicott visited his remaining years saddens the closing Buffalo "alias New Amsterdam," as his chapter of his life. was alarmed in a moment, and in the at-

tempt to secure the savage John Hewitt

was fatally stabbed. During the night the

Indian was taken to Fort Niagara for safe-

keeping. Next day a band of half a hun-

dred warriors appeared in the settlement,

armed with rifles, tomahawks, and knives,

threatening to take dire vengeance if their

young man was executed. The opportune

removal of the murderer the night before

probably averted a still more awful scene

of bloodshed than he had enacted. After

howling like fiends over a pool of gore said

to have been that of the guilty Seneca, his

would-be rescuers set off for Niagara, leav-

ing such of the terrified villagers as had not

fled to regain their equanimity if they could.

The firmness and coolness of the officers at

Niagara prevented further bloodshed, and

the Indian was finally released, dying a

natural death on the Reservation at an ad-

vanced age. Justice would have demanded

his execution, but the wiser course doubt-

less was pursued, the little settlement being

ill prepared to repulse an attack from the

entire force of the Indians. The citizens,

backed by Ellicott and his surveyors,

petitioned Gov. Clinton to use his influence

with the general Government to secure a

small garrison at Buffalo Creek, as the

Senecas had at other times shown an un-

friendly spirit. It is probable that this

petition was of little effect until the approach

ers would be to exceed the possible limits and he could not consent to hand over in a of the present history.

village plot generally known as Upper Black Rock. The Mile Strip was to be sold off LAKE ONTABIO for farms, etc., by the State. The "Black Rock Ferry" was an important spot in the Mile Strip. Its boat crossed to Fort Erie, then quite a settlement, and it was the terminus of the Batavia stage-road already described, and of the beach-road from Buffalo Creek. Fort George Mr. Ellicott recognized the eligibility of the neighborhood of the Ferry for a settlement. He saw the danger to Buffalo of such a rival, and in May, 1802, only two months after the Mile-strip Act of Legislature was passed, he wrote to General Agent Paul Busti at Philadelphia that "if the State shall make the intended purchase this summer, and offer this spot for sale before "The spot is unhealthy," he says, "though New Amsterdam gets in operation, the nick of time will be lost to the future prosperity of that place." He urged further that he be authorized to act under his own discretion Tuscarona 1 References as might seem to him for the interest of the A. Queendown Dutch proprietors. The Holland Company B Gen. Village of St Davids. panies this history, and which is reproduced q. q. q. The rout by which the British Lundys Lane from the earliest available maps, made by troops under Gen Sheaffe got the best engineers. Chief among these is to the top of the mountain one drawn "for and by" S. Ball in 1825, and a very accurate one prepared by the late Peter Emslie in 1850 under the direction of the Committee on Local History of Oak Bluff the Young Men's Association. Study of this map will give a good idea of the village during this decade of its life, and it will frequently be referred to in the present Grand narrative. It is confined principally to the "Inner Lots," which were sold for village purposes, the "Outer Lots" being much Iskand larger, and disposed of for farms, etc. The loyal Ellicott thought to perpetuate

in the streets the names of the chief members of the Holland Company, even as he had tried to re-christen Buffalo after the greatest of Dutch cities. General Agents Cazenove and Busti, too, are honored, each with a street and a terrace. The eagle and the swan - chief among land and water birds - are recognized in the street names of the amphibious but ambitious little town. Tavern-keeper Crow's brief namesake bears to the other streets about the same relation as to length that his name sustains to those of the honest Dutch proprietors. All the Six Nations whose trails once crossed this site, beside three other tribes, are given monuments in the more permanent American, and a much better one than on "streets" of civilization.

Ontario to the mouth of Buffalo Creek.

This parcel of land has always been known

as the "Mile Strip," and has been the

scene of the chief events on the American

side of the Niagara frontier since its pur-

chase. The following parcels were excepted

from the Mile Strip: One mile square at

Fort Niagara; one mile square at Lewiston,

where the State owned a warehouse and

dock; the Steadman Farm at the upper

end of the portage around the Falls; the

square on the bank of Conjockety (Scaja-

quada) Creek, now including what is called

North Buffalo; four lots south of the Con-

jockety; one hundred acres known as the

"Ferry Lot" at Black Rock; the triangle

reserved for military purposes, forming

part of the Fort Porter grounds; and a

"Jones and Parrish Tract," two miles

Niagara, Church, and Erie streets have obliterated Schimelpennink, Stadnitzki, and Vollenhoven avenues. Even some of the Indian names are gone. Onondaga Street is sacrificed to the Father of his Country, while Oneida gives way before the memory of Ellicott

In the semi-circle bounding his property to the west, opposite to the present cott planned to build his manor-house, which should command grand views up and down Main Street, and down Niagara, Church, and Erie. Here he hoped to pass his declining years, the center of the city which himself had founded. But this pet plan was defeated by the Commissioners of Highways, who insisted that Main Street should be straight, and the discomfited agent then refused to build at all. North and South Division, Washington, and Ellicott streets ploughed through his manor, which had cost him \$750, and obliterated

all trace of that which had been his hope and prospective pride. The year 1802 was marked by the establishment of a postoffice. Seth Pease, one of Ellicott's surveyors, was a brother-inlaw of Postmaster-General Granger. Through this influence Mr. Ellicott secured what he might not otherwise have obtained, and James Brisbane was appointed postmaster. The mail was carried by Ezra Metcalf, who traveled on horseback and

was displayed in an application dated by trouble it still more, but finally to be swal- of his mail-bag in his hat. In July of that year, too, the first murder darkened the history of Buffalo. Landlord Palmer sat at the door of his little tavern at \$150, and No. 4 at \$250. From these the On March 19th, 1802, the Legislature in the cool of the evening with William prices decreased till No. 204 was held at too much of a "boom" even for Joseph passed an act under which the State ac- Ward and Joseph Keeler. stagnant waters. The diseases prevailing here are those which are common to all this country." Dr. Dwight saw plainly the difficulty which at that time gave Black Rock a dangerous commercial advantage over Buffalo. After mentioning the bar at the mouth of Buffalo Creek, which prevented the entry of vessels larger than a row-boat, he speaks of Black Rock-by which he evidently designated Squaw Island -and says "that between this rock and the shore is the only secure harbor on the the British side of the lake." And though And yet, with all its Dutch ownership, and Dr. Dwight had Black Rock in his eye when he wrote, his was a no less remarkable tant when the commerce of this neighborhood will become a great national object, and involve no small part of the interests and happiness of millions." Dr. Dwight saw "five schooners, a sloop, and a pettiaugre" at anchor in the imperfect shelter of Buffalo harbor. And this was in 1804, the woods swarming with wild animal life, and the neighboring reservation filled with half-savage Indians, more numerous by far than the settlers.

"churches" on Main Street, Joseph Elli- GROWTH OF THE VILLAGE-BUYING LOTS -PRICE OF LAND IN 1804-5-THE CEM-ETERY AND ITS SUCCESSORS-DEATH OF WILLIAM JOHNSON-THE COUNTY OF NIAGARA - FIRST BENCH AND BAR -COURT HOUSE AND JAIL.

> ROM this time forward the new town grew more rapidly. The following persons secured lots from the Holland Company: 1804—William Robbins, Henry Chapin, Sylvanus Maybee, Asa Ransom, Thomas Stewart, Samuel Pratt, William Johnson, John Crow, Joseph Landon, Erastus Granger, Jonas Williams, Robert Kain, Vincent Grant, and Louis Le Couteulx; 1805—Cyrenius Chapin, Thomas Sidwell, Nathaniel W. Seaver, Isaac Rhoades, and Samuel Tupper. Some of these names have been mentioned already. There are but few in the list who were not important agents in building up Buffalo, and the the Senecas, Farmer's Brother. When descendants of many of them are living this great chief's body was removed with

The prices at which these lots were sold might have conveyed the meager contents to the first purchasers were determined by location. Reference to the map will make clear the following statements: In 1804 Inner Lot No. 2 was fixed by Mr. Ellicott streets, and Outer Lot No. 1, on Water Street, for \$350. The lots now covered by the First Presbyterian and St. Paul's Episcopal churches were reserved by the Holland Company for religious uses, and were so deeded. In 1806 Inner Lot No. 36 sold to Asa Chapman for \$120, and Smith H. Salisbury bought Inner Lot No. 183, on Washington Street, for \$480. At this time land beyond Chippewa Street, on Main, was selling for \$11 and \$12 an acre. In 1810 Dr. Chapin bought Inner Lot No. 40, where the Weed Block now stands and running through to Erie Street, for \$125. These figures are sufficient for comparison with other periods, and to show the cost of acquiring real-estate in Buffalo before the were removed to Forest Lawn many years War of 1812.

Eagle, Delaware, and Church streets, where not space or time to mention them. now the imposing City and County Hall | For we are now approaching the scene ceased in the Exchange Street lot, probably none but Johnson's own family being interred there after 1804.

Though provided by the residents of Buffalo for their own final resting-place, the first weary one to sleep in the new cemetery was a wayfarer, one John Cochrane, from distant Connecticut, who died suddenly at Barker's Tavern on the Terrace. And the second was an Indian of gigantic frame (from which whimsically called The Infant.) So the earliest settlers were not the first to tenant their last settlement of

use, possibly being too near the centre of and now controls this beautiful City of the

went to Batavia and obtained by "Land There are and have been many smaller Contract" the lot afterwards known as cemeteries in and about Buffalo, including Franklin Square, bounded by Franklin, those of the Catholic faith. But there is

William Johnson, so long identified with the settlement of Buffalo, died in 1807, aged 65, and was buried in the cemetery himself had provided. Although authorities differ as to the parentage of Johnson, some denying (merely on probability) that he was the son of Sir William Johnson and Molly Brant, as we have asserted, the latter seems to be the most probable descent. He was highly respected by his neighbors, and his son, John Johnson, was educated with care, being a student at Yale College. He was a young man of excellent manners, and after finishing his studies married Ruth Barker, daughter of Judge Zenas Barker, and was a clerk in the store of Capt. Samuel Pratt on Crow Street.

About this time the first religious society was formed in Buffalo. It probably was a rather informal union of Presbyterians and Congregationalists, and was ministered to by the Rev. Thaddeus Osgood. In the absence of a clergyman, Deacon Callender was wont to conduct services. It is not unlikely that before this time the young and reverend pedagogue sent here by the New-York Missionary Society preached.

In 1808 the County of Niagara was erected. It embraced all the territory of and Buffalo was made the county seat. Here was new honor for the little town, and an assurance of certain future permanent advantages over its dangerous rival opposite Squaw Island. Augustus Porter, Robert Morris's surveyor, who had accompanied Joseph Ellicott when running the boundaries His associates were Samuel Tupper, Erastus Granger, James Brooks, and Zattu Louis Le Couteulx clerk. In 1805 the "District of Buffalo Creek" was established, and Erastus Granger was appointed its first collector. Prior to that time this territory was included in the District of Presque Isle-Detroit-of which Gen. William Irvine was collector. Mr. Granger and his brother Gideon had contributed, at their home in New England, to the election of Thomas Jefferson, whom they had known while sojourning in Virginia. Gideon Granger was appointed Postmaster-General, and Erastus was sent to Buffalo to watch the interests of the Jeffersonian party. He boarded at Crow's tavern, and was appointed Superintendent of Indian Affairs, postmaster, and collector.

These political rewards proved to be good appointments, Mr. Granger being an excellent official. He bought what has

since been known as the Granger Farm, beyond Cold Spring on the little Four Mile Creek, and was identified with the growth and prosperity of Buffalo. Part of the Granger Farm is now embodied in Forest Lawn cemetery, The oak grove near his residence was for many years a favorite spot with the Senecas for holding their

On the third day of October, 1811, Smith H. and Hezekiah A. Salisbury issued the first number of the Buffalo Gazette-the pioneer of the press of Buffalo. In another part of this issue of THE EXPRESS will be found a brief sketch of the descent from this sturdy little sheet. It was an important element in the growth of Buffalo, and led a more perilous life than most news-

FAC SIMILE OF HOTEL BILL.

Here, too, in 1815, was buried with military honors one of the best and noblest of the rest to Forest Lawn, little was left of his coffin but a portion of the lid, bearing the initials "F. B." in brass-headed nails. This relic now hangs beneath the portrait of the old warrior in the rooms of the Buffalo Historical Society.

Burials in the Franklin Square lot were discontinued in 1832. The last to be interred there was the wife of Judge Samuel Wilkeson, a daughter of Gamaliel St. John, in 1836. For this a special permit was necessary. Burying grounds were opened at Cold Spring and Black Rock at an early day. The general cemetery which succeeded that of Franklin Square was the one now being obliterated by handsome dwellings, at the corner of Delaware Avenue and North Street. It consisted of five acres, bought on his own account by the Hon. Lewis F. Allen, in 1830, of Judge Ebenezer Walden. Mr. Allen formed an association consisting of himself, George B. Webster, Russell H. Heywood, Heman B. Potter, and Hiram Pratt; and Joseph Clary surveyed it into lots. The smallness of the site and the prevalence of springs on the lower side prevented a very long or general use of this cemetery. Most of the bodies ago; and there had been none lying in the Young as the settlement was, death al- North Street lot for some time before it began to be used for residences.

Their late Rebellion. But it settled the question pay was irregular, and much of the initial enthusiasm oozed out before the first shot

On May 17th Lt.-Col. Swift of Ontario County arrived at Buffalo and assumed command on the Niagara frontier. The next day the first detachment of militia from the south towns, under Major Benjamin Whaley, marched through the excited village, en route for Lewiston. By the 23d of June, Col. Swift, having established his head-quarters at Black Rock, had some six hundred militia under his command; beside which there was a small garrison of regulars at Fort Niagara. Among these troops was the light-infantry company of Capt. Wells and the company of Capt. Hull, which were embodied for the immediate Although war was declared on the 18th

proportion of the former was surprisingly for even bad news to travel. It is said that on the morning of the 26th citizens of Buffalo saw a small vessel, loaded with salt from Black Rock, pursued and captured by a British armed vessel from Fort Erie. This astonishing procedure was soon ex-

selaer's head-quarters on July 17th. It created no less profound a sensation on these lines than throughout the country. It at once increased the danger on the Niagara frontier. The British troops sent to besige Detroit were now at liberty to concentrate between Lakes Erie and Ontario, and the knowledge that Hull had so ignominiously given up without firing a shot spread indignation among the soldiers of Van Rensselaer. They burned to strike a blow in retrievement of the lost honor of the Army. This only multiplied the difficulties under which Van Rensselaer labored, for he still did not regard his troops ready to advance into Canada, and encounter not only Brock's Niagara forces but the victorious battalions returning from Detroit. While postponing the struggle as long as possible, he redoubled his efforts to prepare his army for it.

During September reinforcements arrived with gratifying rapidity. From Oswego came Major Moseley's battalion of riflemen. A troop of horse from Col. Geo. D. Wickham's regiment of detached cavalry also joined, and the 19th regiment of militia under Col. Bloom arrived and were added to the army. Two thousand Pennsylvania troops were ordered to the Niagara frontier, and three of the newlyraised regular regiments were forwarded at once to Buffalo. They were brigaded under Brig.-Gen. Alexander Smyth, U. S. A., of whom more anon. Thus by the first of October several thousand men were added to the force under Gen. Van Rensselaer.

The coolness with which the Buffalo commander excuses his failure to hurry to The clamor for a movement into Canada, his leader's support is only equalled by his and the improvement in the personnel and amusing utterances a few weeks later which

General Van Rensselaer to plan an attack Buffalo, he reported by letter to Gen. Van the Fort Niagara point.

Gen. Van Rensselaer intended to march Gen. Smyth with fifteen hundred regular troops by the new road (MM) to Four Mile Creek, and hold them there ready to embark at a moment's notice. Queenstown was then to be attacked by forces under his own direction, thrown across the river at Lewiston. The sound of this latter engagement would be heard at Fort George, whence troops would be sent to aid in defending Queenstown. As soon as this column should be seen leaving Fort George, Smyth was to be informed by signal from Fort Niagara, embark his force, and proceed by water to the rear of Fort George, which, weakened by the detaching of reinforcements, he was to take by assault with his fifteen hundred regulars.

Information obtained by Van Rensselaer from a spy was to the effect that the force on Queenstown Heights consisted of two companies of regulars and a miscellaneous collection of militia and Indians, and thus was greatly inferior to his own. He has been blamed for not more thoroughly informing himself. But the accounts of English writers confirm that of the spy and vindicate Van Rensselaer. The British force consisted of the two flank companies of the 49th Regiment, under Captains Dennis and Williams, and such militia and Indians as the neighborhood afforded, which could not have been very great. General Brock was at Fort George before the engagement began, but repaired to Queens town as will be related.

It is thus apparent that the plan of attack offered every reason to expect a handsome victory.

But Gen. Smyth did not come headquarters to consider this plan, as desired. Still, urged by the open demands of his men, which were sure to lay him under the stigma of cowardice, or worse, if he longer delayed, and knowing the smallness of the force opposed to him, he made his first attempt on the 11th, as detailed in his correspondence with Gen. Van Rensselaer already given.

The failure on the 11th was caused by a blunder of Lieut. Sims, charged with bringing up the boats for the assaulting party at Lewiston. He placed nearly all the oars for the flotilla in the front boat, and then missing the Lewiston landing-place in the darkness, passed far up the river, where he unaccountably fastened his boat to the shore and left her, thus paralyzing the entire expedition then waiting to cross and assault the heights. They stood ready in the darkness, drenched by a heavy northeast storm which raged for twenty-eight hours, deluging the camp.

Upon hearing the oars of Col. Van Ren-

selaer's boats, the enemy opened a heavy

fire from the top of the bank. In spite of

it, a landing was made with 225 men and

the bank carried with the bayonet. But not without serious losses. Ensign Morris was killed, and Captains John E. Wool, Malcolm, and Armstrong wounded, Col. Van Rensselaer being peculiarly unfortunate. A shot passed through his hip, two lodged in his thigh, two in the leg, and one contused his heel. He managed to keep his feet, concealing his condition from the men by means of a military cloak. Col. Van Rensselaer would now have entrusted the command to Col. Christie of the regulars had he not retreated before landing. As it was he turned it over to Capt. Wool, whose wounds were not serious, and who led the party up a steep fishermen's path, deemed impassable, and hence unguarded by the enemy. As the detachment

filed off Col. Van Rensselaer fell to the

ground exhausted.

Wool's party reached the height partly in rear of the battery and fronting the village. But the cannonading had brought Gen. Brock and his aides at full gallop from Fort George, and Capt. Wool encountered two companies of the 49th Regiment and a few Canadian militia marching under Brock to turn his left flank. He at once sent 150 men to gain the heights above the Queenstown battery and hold Brock in check, but they retreated. Although reinforced by Capt. Wool, the Americans were driven back to the edge of the bank. Here a stand was made, but some of the American officers preparing to wave a white flag, Wool snatched it from them, ordered a charge, and gallantly drove the enemy to the verge of the heights. Here Col. McDonald, Gen. Brock's principal aide, was mortally wounded, and a few minutes later his chief was shot dead in the upper part of the

Capt. Wool now formed his troops in line on the heights fronting the village and sent out flanking parties to assist in completing his work. It was now three o'clock in the afternoon. About this time Col. Christie appeared, and despite his failure of the early morning, assumed command, directing Wool to cross the river and have his wounds dressed. The flanking parties were driven in by the Indians, but Gen. Wadsworth's reinforcements now arriving, after a short skirmish the British were in full retreat.

The enemy fled in confusion and the victory seemed won. All worked as Gen. Van Rensselaer had hoped. He had kept up a heavy fire from across the river, silencing all the enemy's guns on the river-bank and

the bank and clung to the bushes to save themselves from the Indians whom they had repulsed but a short time before. Others were dashed to death on the rocks below. A small number gained the boats and escaped to this side; the rest being either killed or captured.

Col. Van Rensselaer was removed to Landon's Tavern, in Buffalo, where he lay suffering from his wounds for four weeks. At the end of that time, being well enough to travel, he took his departure, amid the salutes of Dr. Chapin's "Independent Buffalo Matross," Capt. Babcock's Light Dragoons, Capt. Allison's Pennsylvania Volunteers, and a rifle company under Lieut. Smith. The Colonel seems to have carried away with him the respect and admiration of the citizens and the loyalty of the army. His six wounds at Queenstown were not his first experiences of the kind. He was desperately wounded through the lungs in the Revolutionary War, where he had served with gallantry and distinction.

CHAPTER XV.

REMOVAL OF VAN RENSSELAER - POETIC INJUSTICE - BRIG.-GEN. SMYTH - NAP-OLEONIC PROCLAMATIONS - A GALLANT ADVANCE - A FARCICAL FAILURE - A DUEL - EXIT SMYTH - A RIOT IN BUF-FALO - SACKING A TAVERN - ARTILLERY IN THE STREETS - THE MOB DISPERSED -AN EPIDEMIC - THE GRAVE IN THE PARK MEADOW.

The disaster at Queenstown of course caused the removal of Gen. Van Rensselaer. The penalties of military failure are only equaled by the rewards of success. Poetic injustice was done by the elevation of Gen. Smyth to the command.

This officer was a member of the Virginia Legislature in 1808, when he resigned his seat to accept the colonelcy of a regiment of rifles in the regular army. In July, 1812, he was made a brigadier. We have already witnessed his advent on this frontier.

On November 12th Gen. Smyth issued a flaming address to the "Men of New-York," dated at his "Camp near Buffalo," calling upon them to flock to his standard and announcing that in a few days he would plant the American flag in Canada. Of his men he said: "They are men accustomed to obedience, silence, and steadiness. They will conquer or they will die."

As will be seen, the most of them did neither.

"Advance to our aid," he continued. "I will wait for you a few days. I cannot give you the day of my departure; but come on; come in companies, half companies, by pairs or singly. I will organize you for a short tour. Ride to this place [Buffalo] if the distance is far, and send back your horses; but remember that every man who accompanies us places himself under my command and shall submit to the salutary restraints of discipline.'

Smyth further was guilty of excessively bad taste in sharply criticising his predecessor for the failure at Queenstown, classing him with Hull as "popular men, but destitute alike of theory and experience in the art of war."

On the 17th appeared another manifesto, addressed "to the soldiers of the Army of the Center." It began thus: "The time has come when you are to cross the stream of the Niagara to conquer Canada - a country that is to be one of the United States," and closed with this sanguinary flight: "Come on, my heroes; and when you attack the enemy's batteries, let the rallying word be - 'the cannon we lost at Detroit, or Death!""

A good many heroes, and a fair proportion of others, answered this call and "came on." Some four hundred New-York volunteers joined, and Peter B. Porter was appointed to their command. Dr. Cyrenius Chapin here began his first regular service in the army, being commissioned a major, with Samuel Pratt as adjutant and J. E. Chaplin quartermaster. Two companies of the "Silver Greys" came to the front, and two thousand of the long-expected Pennsylvania troops put in an appear-

Gen. Smyth now resolved to try his pet plan of a descent upon Canada above the Falls. Being ordered, he says, to invade the Dominion with 3,000 troops, he would show that he was right and Van Rensselaer wrong in their difference of opinion a month earlier. He had over 3,500 men collected at Buffalo and Black Rock, with boats enough to convey at least 3,000 across the river. His plan was a good one (which did not prove Van Rensselaer's to have been bad), and there was no visible reason to doubt its success.

The orders for the grand movement were

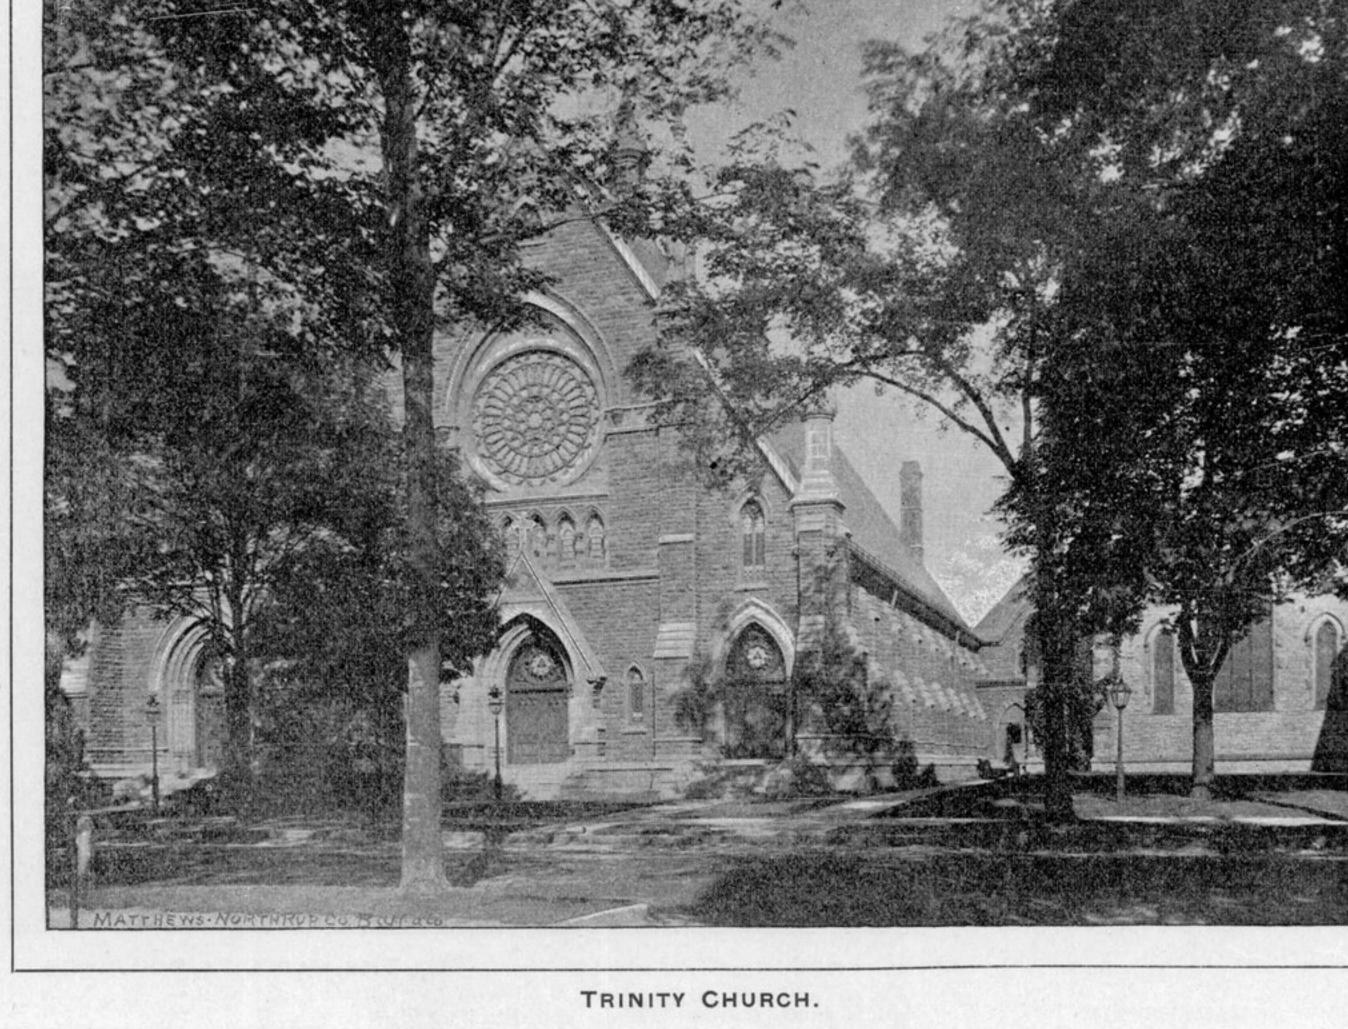

issued on November 27th. The troops and Angus's blue-jackets, and behaved with were to embark at Conjockety Creek, where the utmost gallantry.

ST. PAUL'S CATHEDRAL-CHURCH.

hair, attracted the notice of the citizens of Buffalo. He wore the uniform of a Captain in the American Navy, and the gossippy little village soon knew that the stranger was Captain Oliver Hazard Perry, sent hither to superintend the construction of a fleet, of which he was to be the Commodore.

Though many who saw the ruddy and Doyish Commodore in Buffalo, and watched his departure for Erie, may have doubted the wisdom of charging such a youth with so grave a responsibility, a few months served to turn all doubters into enthusiastic admirers of the immortal Perry, and to make the last words of Lawrence, which he emblazoned on his flag-"Don't give up the ship "-a watchword of victory in the American Navy.

Erie, because of its somewhat secure harbor, was selected as naval head-quarters. During the winter a number of merchant vessels had been bought to be transformed into men-of-war, and the keels of new ships were laid. Conjockety Creek was only second to Erie in these important proceedings. Five vessels were fitted out there, under Elliott, and Perry became a familiar figure in Buffalo during his frequent visits to the little navy-yard.

The Conjockety, now hemmed in and befouled by factories, has utterly lost its primeval appearance. Neither Perry nor Elliott could recognize a single rod of it to-day. It is hardly noticed by the millions who cross it near the old navy-yard on the Belt-line trains, or by the tourists on their way from Buffalo to the Falls. It is as nothing compared with the harbor of Buffalo. Yet in Perry's time Buffalo Creek was a useless and scarce-noticed stream, while the now despised Conjockety was one of the most important naval stations on the lakes. Indeed Lieut. Elliott made every effort to secure for it the favor shown to Erie harbor, and stoutly maintained that Conjockety Creek was superior to Presque Isle for a navy-yard, having no bar and being sheltered behind Squaw Island. But the modest stream was contented with tion of all concerned.

The campaign of 1813 opened auspiciously. Gen. Dearborn continued to command the whole northern frontier, and on April 17th Maj-Gen. Lewis and Brig.-Gen. the Americans during the war. Boyd arrived at Buffalo and entered upon the duties of their respective ranks.

An expedition from Sackett's Harbor under Gen. Dearborn and Commodore Chauncey caused the fall of York (now Toronto). This left the British forces on this frontier peared off Fort George about May 27th, Buffalo. and the garrison at once evacuated it, retreating toward the head of Lake Ontario. was killed by the fire from the bank. Capt. Saunders of the British 41st was wounded retreat became a rout, and the volunteers lowed. The Americans, besieged and bomand captured. He was carefully nursed at Gen. Porter's house and finally recovered. The enemy's loss was eight killed and seven wounded left on the field beside those carried away and hit in the boats after embarking. Our own loss has been given. The militia, who so bravely held their own in the fight, were the same that fled ingloriously in the morning. Adjutant Staunton, whose gallantry did so much to win the day, was the father of Phineas Staunton, the first Lieutenant Colonel of the gallant 100th New-York Volunteers in the War of the Rebellion. The efficiency and gallantry of Gen. Porter on that day saved Buffalo from an attack, which, however, came later, and swept it away by fire.

Henry Lovejoy, since so well and honorably known in Buffalo, but then a boy of only thirteen years, shared in the dangers of this brave defence. He carried a ponderous flint-lock musket, and his part in the affair was not forgotten when the wave of war finally swept over his home.

Chapin and his rangers continued to operate in the neighborhood of Fort George and elsewhere across the river. But he was in Buffalo to fire salutes when the news came of Perry's glorious victory of September 10th. The whole village was illuminated. The first and last guns of that battle

CHAPTER XVII.

REBUILDING THE VILLAGE -- NOT OUT OF THE WOODS - DISTINGUISHED VISITORS - A SLAVE SALE - THE "WALK-IN-THE-WATER" - BUILDING A HARBOR - THE SHOVEL BRIGADE - A FIGHT FOR LIFE-BUFFALO TRIUMPHANT - THE YEAR OF SENSATIONS - THE THREE THAYERS -ARARAT - THE CANAL FINISHED.

THE story of the second growth of Bufthe negotiation ended. But time was gained sketchy character, it will be none the less valuable on that account.

The First Church was organized on February 2, 1812, the Rev. Thaddeus Osgood, was built. This was followed by the "Brick Church" as it was called, the "Old First" of to-day, which was joyfully dedicated on March 20, 1827, the Rev. A. D. Eddy preaching the sermon. The Rev. Miles P. Squier was its first pastor, installed May 3,

The village was incorporated in 1813, but the war disturbances made it necessary to rearrange its affairs, and in 1822 a new charter was granted.

During 1814, despite the war, building had gone on and returning citizens and new settlers rehabitated the village, a brickyard was started, and more substantial buildings were erected.

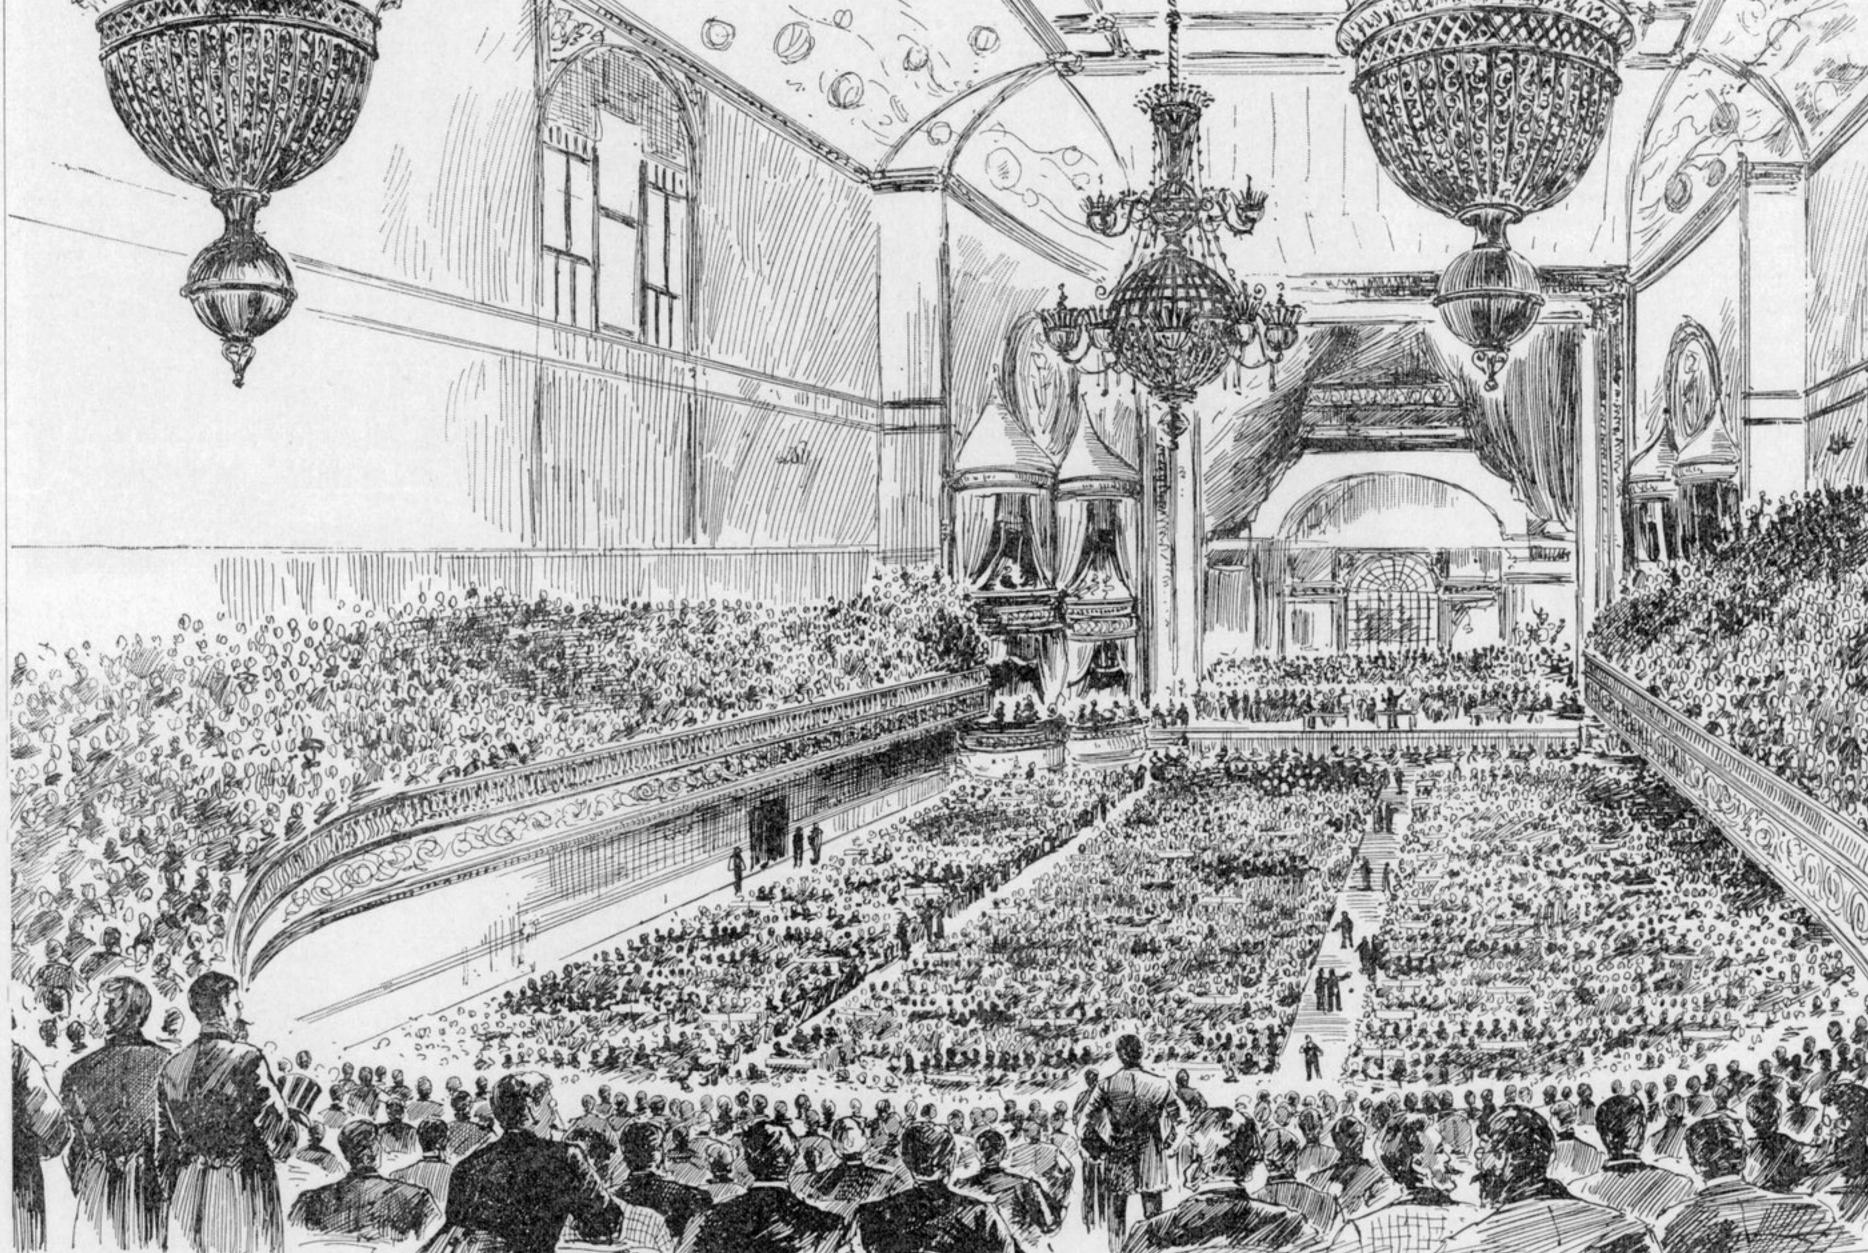

Editor Salisbury brought the Gazette back in safety from Harris Hill, and in 1815 an 'esteemed contemporary" arose to give spice to his life. This was the Niagara Journal, a Democratic newspaper established and edited by David M. Day to refute and confound the Federalism of the

The first local marine intelligence in a Buffalo paper appeared in the Gazette of August 15, 1815, under the heading "Port of Buffalo." It covered the preceding week and was as follows: "Entered - a boat from Detroit, loaded with fish and wool; sloop Commodore Perry, peltries. Cleared-Sloop Fiddler, Cuyahoga, salt and pork."

The court-house, which was good enough for Buffalo until the centennial year of the Republic, was erected in 1816. Few local readers of this history but remember its pillared front and tin-roofed dome. The bell which was wont to call together the distinguished jurists and barristers of an early day now hangs mutely eloquent in the Historical Society's rooms, kept in countenance by the wooden ball that tipped the court-house flagstaff.

In July the Bank of Niagara was organized, with directors scattered throughout the county, Isaac Kibbe being president and Isaac Q. Leake cashier.

But with its court-house finished, a "grand canal" in prospect, a bank to prosper and two newspapers to enlighten it, Buffalo was not yet out of the woods. For in the town-book of 1816 we read: "Voted that a reward of \$5.00 be paid for the de-

INTERIOR OF MUSIC HALL, AT REPUBLICAN STATE CONVENTION, MAY 16, 1888.

after rowing several hours in the darkness landed just after daylight a mile below Conjockety Creek. There was a single sentinel at the draw-bridge, who, when he saw the red-coats, flung away his musket and started through the woods for Williamsville. The British column silently passed the sleeping garrison in the barracks, or block-house, whom the frightened sentinel had failed to awaken by not discharging his piece, and approached the encampment of Maj. Adams. The soldiers had evidently received the alarm, for they fled without even spiking their single field-piece.

A detachment of the invaders now visited the house of Gen. Peter B. Porter, the pleasant old mansion where the venerable Lewis F. Allen now lives, on Niagara Street, just below Ferry. The General was in bed, but was roused by a servant, and found barely time to mount his horse and fly, some say clad in a single garment. He first made towards Adams's encampment, but finding that line of retreat cut off, turned

The British now evidently thought all resistance ended. They burned the barracks and block-house, spiked the heavy guns in the battery, and carried off the Rock were taken to Canada as prisoners, while the officers coolly ordered breakfast, and sat down in General Porter's diningroom to enjoy it. While eating they could see their reinforcements coming across the river in boats, and felt the fullest confidence that they had won a victory.

But the alarm had reached Buffalo, and Boerstler surrendered his whole command. donia was made the flagship for the time, Gen. Porter met Captain Cummings with some regulars marching out Niagara Street. While hastily buckling on the equipments and mounting the horse of a dragoon, Gen. Porter directed the captain to pause in an open field near the site of the present reservoir and await reinforcements. He then dashed on to Buffalo to hurry them

were added in 1831, and a basement Sunday-school room was finished off in 1834. The appearance of the original St. Paul's and the "Old First" are shown in the sketch made in 1838, reproduced with this

The following advertisement appeared in the Gazette of January 27, 1818:

"For Sale.—A young, healthy black woman and child. She understands all kinds of house-work and cooking, and is perfectly honest. For further particulars inquire at this office."

Who, if any, bought these chattles does not appear.

During this period the stages for the East left Landen's Tavern on Mondays, Wednesdays, and Fridays at five o'clock in the afternoon, traveling the Main-street road. The trip to Canandaigua occupied two days.

The great event of 1818 was the launch of the Walk-in-the-Water—the first steamer to ply the lakes. She was built at Black Rock - Buffalo again jealous - by New-York capitalists, and on May 28th took the water amid great rejoicing. Toward the middle of August she was helped up the river by oxen and plied between Buffalo and Detroit till 1821, when she was wrecked near the lighthouse.

The late Bishop Timon stated that the first Roman Catholic priest visited Buffalo about eight years after the village was burned. The Right Rev. Henry Conwell, Bishop of Philadelphia, then passed through and baptized a child of Patrick O'Rourke. He was followed in 1821 by the Rev. Father Kelly of Rochester, who said the first mass here. Strange to relate, it was celebrated in St. Paul's Episcopal Church!

Erie County was separated from Niagara in April, 1821. It contained ten postoffices and hordes of wolves. At the same time there was a theater in Buffalo.

came the next year, began to teach school in a little building whose dimensions are indicated by the picture given on another page, taken just before it disappeared. The pedagogue used to ride out to his little the east. It is believed that he made some subsequent headway in life. His name

was Millard Fillmore. On the 10th of August, 1817, there lay in Buffalo Harbor - probably including Black Rock-38 sail, comprising one brig, 31 schooners, and six sloops. Yet so far ley, and other distinguished men who had the bar had not been removed from Buffalo Creek, and entries were generally impossible | board the canal-boat Seneca Chief, and

But the man for the hour appeared, and William Wilkeson suddenly became the foremost figure in Buffalo. The Superintendent (at \$50 a month) of harbor excavation had wearied of his unprofitable labor and resigned. Mr. Wilkeson, lately appointed a judge of common pleas, gave up all his individual business, and devoted all his energies to making a harbor for Buf-

There were no funds. Four men made a bond for \$12,000, and took rather slim chances in doing so. Let their names never be forgotten, for they were the preservers of Buffalo when it gasped for breath: Samuel Wilkeson, Charles Townsend, George Coit, and Oliver Forward.

Judge Wilkeson labored with his own hands at the head of a force of men, each of whom received two dollars a month extra for working in the rain. William Peacock had made the survey, and in 221 working days a pier of fascines extended about 80 rods into the lake, where there was 12-foot water. The channel being thus confined and extended, it was expected that the spring freshet would clear out the harbor.

The Steamer Superior was built and launched in Buffalo Creek, the village being under a bond to pay \$150 for every day she was delayed by the bar after May 1st. fifty years. By the almost superhuman efforts of Judge Wilkeson and the citizens, the freshet was aided by shovels, and the Superior steamed into the lake. Buffalo had a harbor.

The Erie Canal.

Later on he claimed "the original and the

first publication of a project for the over-

land route of the Erie Canal, from Buffalo

to the Hudson," and that "in it he was a

benefactor to the public in general and to

the State of New-York in particular." But

others have also laid claim to the original

idea. It has been well remarked by a

judicious writer that it is in vain to inquire

who first thought of connecting these West-

ern, Northern, and Southern waters. The

discovery would not benefit the community,

nor entitle the person to whom the original

thought might be traced to any more credit

than if it were a dream, provided he did

nothing toward procuring action to be taken

In the session of 1808, of the New-York

Legislature, Mr. Joshua Forman, a Mem-

ber of Assembly from Onondaga County,

proposed in that body a concurrent resolu-

tion to direct a survey to be made "of the

most eligible and direct route of a canal, to

open a communication between the tide-

waters of the Hudson River and Lake

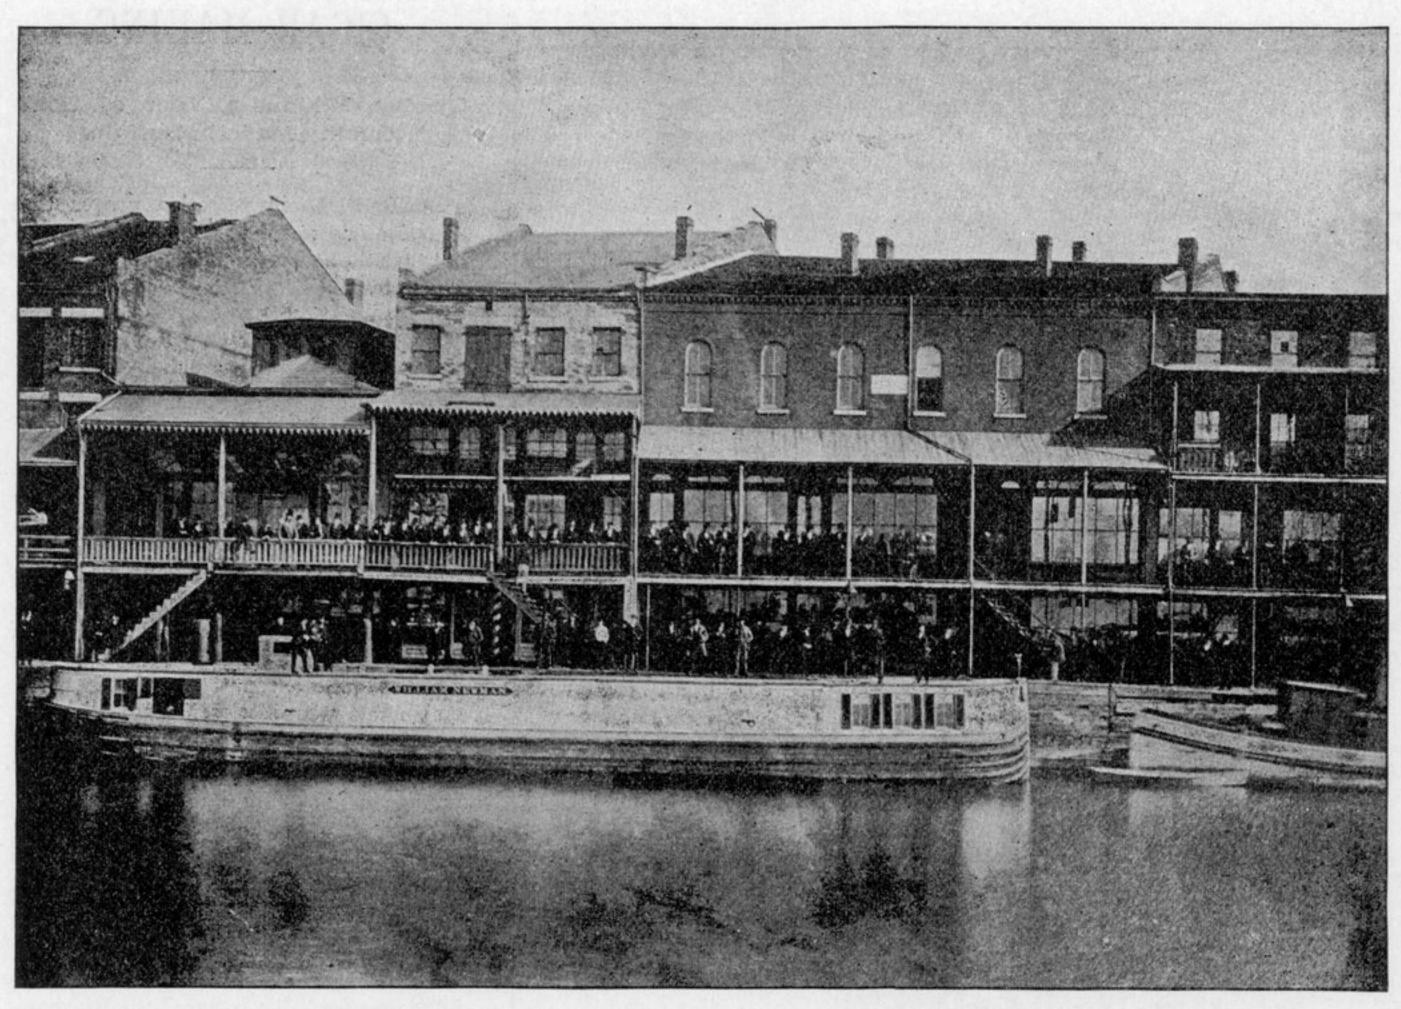

Erie." This is the first legislative proceed-

OUR COMMERCE.

Enormous Yearly Receipts of Grain and Live Stock.

LAKE AND CANAL TRADE.

Richest Inland Commerce in the World-Its Continued Growth.

By HORACE WILCOX.

TO her commerce, more than to anything else, is Buffalo indebted for her prosperity. First of all, it was the embryo traffic of the lakes which formed a settlement; with the completion of the Erie Canal and lines of railway there soon came a large and prosperous city. Her streets are not canals, but she is the Venice of the fresh-water seas, and it is by virtue of the law that commerce seeks the cheapest route that the golden cereals of the West are poured into her lap.

While the Government has been somewhat tardy in recognizing the claims of the port it can now be truthfully said that Buffalo has a safe and commodious harbor. To this may be added the most extensive and improved facilities for elevating, storing, and transferring grain, with chutes and trestles for coal, and extensive docks for handling salt, cement, and other coarse freight. The terminal advantages are un-

surpassed. It seems hardly possible that trade between remote points in this country could have been carried on at all at the beginning of the present century. The Allegany wagon road, about 400 miles long, was built through a wilderness to Albany, and goods were transported on wagons mainly drawn by oxteams. The late Augustus Porter says that up to 1796 no American vessels had been built on the Lakes, and that baggage and stores for the troops at Detroit had to be transported from Western Pennsylvania up the valley of the Big Beaver and through the wilderness to Detroit on pack-horses. Later on, or at about the same time, waterways in part were utilized in the northern part of the State. The Hon. Lewis F. Allen says that for some time prior to the completion of the Erie Canal merchandise intended for Buffalo and points farther west was shipped from Albany in wagons. In the navigable season goods were sent in small flat-boats up the Mohawk River to Rome, thence through Wood Creek to Oneida Lake, and from the outlet of that lake to Oswego. From the latter port sloops took the merchandise to Lewiston on the Niagara River, and from there it had all to be hauled or packed around Niagara Falls to Schlosser; thence by boat to Black Rock, whence navigation was free to all western

Earliest Navigation.

The first vessel ever built above Niagara Falls was called the Griffin. Her projector and builder was the adventurous and distinguished explorer, Cavalier de la Salle, who was born in Rouen, France, on the 22d day of November, 1643. All the material for the rigging and equipment of the craft was transported round Niagara Falls, a distance of nine miles, on the backs of men, four of whom, it is said, were required to falo Historical Society, February 3, 1863, via the recently finished Erie Canal. Lee in 1799, and in 1806 she ran upon Point Abino and was lost with her substantial, and safe vessels owned upon brig Adams and the schooner Tracy were season, and there were 286 arrivals and an built by the Government. The Adams equal number of clearances." was captured by the British during the first year of the War of 1812; she was retaken at Fort Erie, and was then run upon Squaw Island and burned. The Tracy was sold to Porter Barton & Co. and was afterwards lost on a reef near Fort Erie. In the year 1805 the Government directed the commanding officer at Fort Niagara to build at that point a vessel large enough to transport Indian presents from the Fort to Fort Wayne. The vessel was built at Black Rock and named the Nancy; she was of about fifty tons. The Contractor, a vessel of eighty tons, was built at Black Rock in 1806, by Porter Barton & Co. She was sold to the Government in 1812. The schooner Catharine was built at Black Rock in 1808 by Sheldon Thompson & Co. with others. Several small vessels were built at Black Rock and other points before the War of 1812, the names of most of which have been lost.

Buffalo Creek was made a port of entry in the year 1805. On the 16th of March, 1811, Black Rock was made a port of entry, and from that time until 1816 most of the lake vessels landed there, all of them being sloops, schooners, and open boats—32 in all. In the "Journal of a Western Tour," kept and published by David Thomas, he gave the number of vessels on the upper lakes in in 1818 as 50, with a gross tonnage of 1,867. But two vessels were of more than 100 tons, and many of them less than 20.

He was one of the pioneer navigators of Miller as pilot and sailing master. Her force the construction of a canal from the Lakes, and his arrival at different points owners immediately began the construction Buffalo to Utica, and proposed very nearly was eagerly awaited as he carried provisions of another steamer, which was built at the the route occupied by the present canal

The Cattle Trade.

The live-stock business of Buffalo may be said to have commenced about 1852. Tifft Farm and some other places in the efficient and popular shipping agent. 13th Ward, where a limited number could Among the large dealers in those early

Street, opposite those of Mr. Metcalfe, in 1862. They were close to the Buffalo & Erie railroad, which had built a platform for unloading stock.

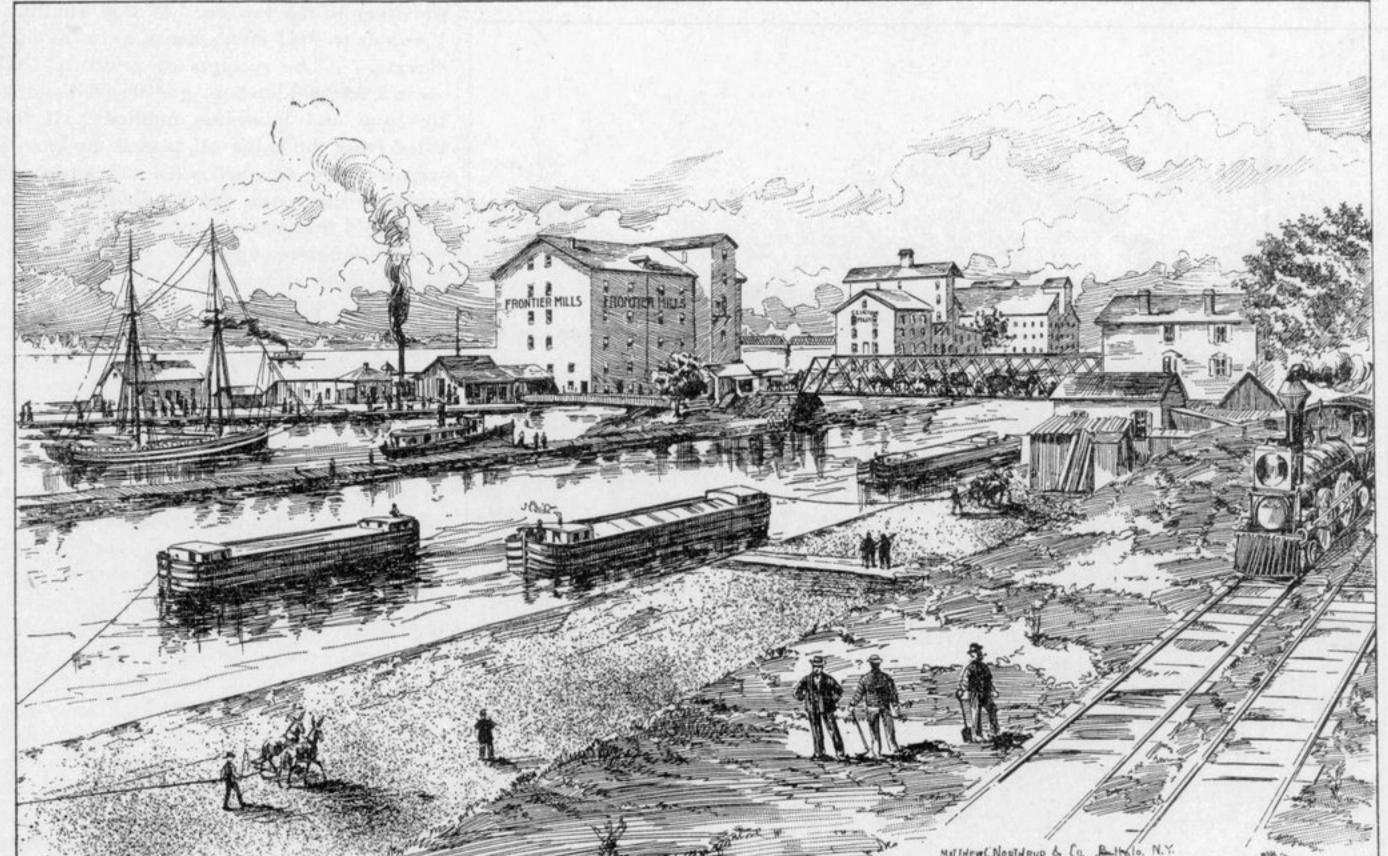

It is stated by a friend that being in "Capt." Mather's office at West Albany early in 1855 (Mr. Mather at the time being agent for the N. Y. C. R. R. at that point), President Corning came in and asked the following question: "Mr. Mather, how many cars of stock have you received today?" "Thirty-seven cars," was the reply. "W-h-a-t!!" said Mr. Corning, "thirtyseven cars! Well, that's glory enough for one day."

One day in the winter of 1855 or 1856 the Buffalo & Erie railway brought in 75 carloads, mainly single decks of hogs. It was literally a surprise, and was talked over far and wide, speculation being rife as to what would be done with so much stock; but the most of it passed quietly on to the New-York market.

About this time the N. Y. Central R. R. had built pens and chutes to load stock on Chicago and Scott streets. The Erie Railway also began to bid for business, and built chutes on Elk Street, and business began to increase. The Buffalo & Grand Trunk R. adapted to steam navigation, it would rapid- R. brought in a few loads from Canada, and Buffalo became a market. In those days commission men were un-

and did his own selling. Henry Roop built a number of hog yards on Elk Street in 1861, but did not find it a profitable business, and they were abandoned after a time. Mr. Wm. Lewis, to whom we are mainly indebted for the facts relative to the early history of the live-stock trade, was appointed Stock Agent for the Buffalo & Erie R. R. in 1855. Wm. Scott began acting in that capacity for Previous to that time a few scattering lots | the Buffalo & Hornellsville (Erie) in 1856. of cattle and hogs came here from the west Later on "Uncle" John Dickey took Wm. by lake, mainly from Toledo. A Mr. Scott's place, and after him, Anderson Crooker had a few pens for hogs on Seneca Dickey. Wm. Barr ("Uncle Bill"), agent Street at the corner of South Cedar, where on the N. Y. GROUP OF MILLS AT BLACK ROCK.

heavy dealers for those times were Mr. McBaker from Ohio, Wm. Robbins and David Ellis of Whitesboro, Samuel Housley of Canastota, and Elias Reynolds of Reynolds, N.Y.

Among the regular shippers were John Bedford, "Col." Wilson, and John and James Ware of Kentucky; Job Taylor and Samuel Sidner of Ohio; Lee and John Templeton of Indiana; John T. Alexander and Morton & Sims of Illinois.

In 1863 the New-York Central Stock Yards were first opened to the public. The first hogs were yarded in Dec. and the first cattle Jan. 7, 1864. Mr. Leonard Crocker, grandfather of the present Superintendent, was manager of the sheep and cattle departments, and Metcalfe & Cushing in charge of the hog department. Leonard Crocker was drowned on his way to his home on the Tifft Farm, on Sunday, Jan. 2, 1870, having been at St. Mark's Church. He was succeeded by his son, Mr. Lemuel L. Crocker, who died March 27, 1885, and was succeeded by his son, Mr. L. B. Crocker, who is the present efficient Superintendent.

After 1864 the business was centralized and systematized. The outside yards died out one by one, and the Buffalo & Erie R. R. carried its stock direct to East Buffalo. The Grand Trunk R. R. drove its stock across the city, and sometimes it was very dangerous business. At one time a lot of Texan cowboys and ponies were brought here from Chicago to do the driving, but even then an unlucky citizen would occasionally be tossed in the air by the infuriated Texan steers. Finally arrangements were made with the New-York Central to bring all the stock around in cars.

In 1865 Messrs. Swope, Wood & Hogle built what are known as the Erie Yards, on William Street nearly opposite those of the N. Y. Central, and the Erie changed its place of loading to that point. These have since been abandoned and others built adjacent to the N. Y. Central yards. The cattle department now has accommodations for 10,000 head, and the sheep and hog departments have each room for 30,000 head. The trade has grown from small beginnings to great magnitude. The receipts in 1887 in carloads were 33,393 of cattle, 26,891 of hogs, 11,039 of sheep, and 2,163 of horses, a total of 73,491 carloads of all kinds of stock, or 567,766 head of cattle, 3,1,46,247 head of hogs, 2,207,800 head of sheep, and 34,608 head of horses, a total of 5,956,421 head of all kinds of stock, worth probably \$136,000,000. Though the rise of the dressed-beef business in the West has to some extent checked the growth of the through trade at Buffalo, this is still one of the great live-stock marts of the continent, and the largest sheep-market in the country if not in the world.

MILLING INDUSTRY.

Its Present Extent and Promise of Future Greatness.

BY ALBERT C. BROWN.

T was Mr. Pillsbury, the Minneapolis flour I king, who said, during the Millers' Convention here in June: "Buffalo is destined to become the great milling center of the country." There are now two cities which lead Buffalo in the capacity of their flour mills. Minneapolis is the first, her limit of production being 30,000 barrels a day St. Louis follows with mills that can turn out 10,000 barrels of flour a day. Buffalo presses close behind, with mills good for 7,000 barrels daily. Mr. Pillsbury and other large Minneapolis and St. Louis millers agreed in acknowledging that Buffalo is to-day the most favorable point for milling in the United States.

What are the reasons for these admissions?

Being at the foot of lake navigation, where all through grain shipments converge, and being within 30 miles by water as near to Duluth as to Chicago, all the choicest hard spring wheat grown in Northern Minnesota and Dakota comes direct to Buffalo's mills at a nominal cost of freight, giving them the selection of the finest wheat grown on the continent. Buffalo is the only point west of New-York City where both winter and spring wheat can be manufactured to advantage. Freight discrimination by roads in New-York State is the only disadvantage, and that it is not believed will be a permanent one.

The production of flour of late years has rather outstripped the consumption. As soon as the latter catches up, new mills will appear, and Buffalo is the place where they will be built. That time is sure to come, although it is hard to tell when. When it comes let Minneapolis and St. Louis look out for their laurels.

The sharp-sighted millers were quick to see Buffalo's advantages when the Erie Canal was opened in 1826. Mr. S. W. Howell at once built the Erie Mill at Black Rock for Kingman & Durphy. This was the first of Buffalo's large mills. The building, with many additions and a good deal altered, still stands. It is now known as the Marine Mills. Millwright Howell soon National Mills and of the Globe Mills, are went into the milling business himself, the oldest established concern in the milling building the Niagara Mills at the foot of business here. The National Mills are Amherst Street. These mills, together with situated on Erie Street and Evans Ship the Globe Mills, built on the other side of Canal, and have a 100,000-bushel elevator Amherst Street a few years later, were in connection therewith. The daily capacburned and never rebuilt.

was built by Mr. Bugbee about 30 years Thornton, the senior member, is president

Prior to 1880 the only known method of making flour successfully was by grinding the wheat between the upper and nether partner. mill-stones. At that time roller-mills were introduced, the mill-stone retired from business after an undisputed supremacy of a thousand years, the millers made more money than ever, and the milling industry had a tremendous boom. The resulting overproduction and reaction which came in 1885 affected Buffalo less than any of the other milling cities, on account of her natural advantages. All the flouring mills in the city are now roller-mills. Indeed, nine tenths of the flour made in the United States is manufactured by the roller pro-

The Banner Milling Co. operates the Banner and Marine Mills. The former is of 600 barrels capacity and is situated on Ohio Street and Ohio Basin, adjacent to the elevators and railroads. This mill makes both winter and spring flour, the Marine Mill, of 400 barrels capacity, located on the Erie Canal at the foot of Amherst Street, running on hard spring wheat exclusively. Urban & Co. are proprietors of the Urban Roller Mill. This concern is an outgrowth of the old flour jobbing house of George Urban & Co., established in 1846, and is composed of George Urban, Jr., E. G. S. Miller, and W. C. Urban. The mill is of 400 barrels daily capacity and runs on both spring and winter wheat. This firm enjoys a large local trade, which takes the larger part of the output, the surplus finding a market principally at Boston and

Schoellkopf & Mathews own and operate the Niagara Falls Mill at Niagara Falls and the Frontier Mill at Buffalo. The former is of 1,500 barrels capacity, and the latter 300 barrels, both running exclusively on No. 1 hard. Jacob F. Schoellkopf has vast business interests in other lines, the active management of the milling business devolving upon George B. Mathews, one of Buffalo's most successful young business men.

The Central Milling Co. operates the Central Mill at Niagara Falls, the office being in the Board of Trade building at Buffalo. The mill is of 2,000 barrels capacity, and runs on hard spring wheat, the "Bridal Veil" brand having a very high reputation in New-York and New-England markets.

E. J. Newman & Co. are proprietors of the Akron Mill at Akron, Erie County, with an office at Buffalo. Their mill is of 400 barrels capacity and runs on winter wheat. Thornton & Chester, proprietors of the

CHAS. A. BLOOMER, PRES'T WESTERN ELEVATING ASS'N.

A Buffalo Invention-And a Revolutionary One-Its History.

THE first attempt at building a grain elevator in the vicinity of Buffalo was made The first steam flouring mill in Buffalo largely into the home trade. Thomas by the Hon. Lewis F. Allen and a Mr. Lord. It was built at Black Rock in 1840, and run by water-power. It had two marine legs, one of which was on the river side and the other in the harbor. It was a failure. Previous to 1841 men's backs were the only elevators. The receipts of grain in 1841 were 2,000,000 bushels, and it was handled by slow and laborious methods. It was lifted from the holds of vessels in barrels with a tackle, weighed with a hopper and scales swung over the hatchways of the craft, and then carried into the warehouses on the shoulders of men. Only from 10 to 15 bushels were thus weighed at once, and a day's work, with a full complement of hands, did not exceed 2,000 bushels.

To Joseph Dart is due the honor of erecting the first steam storage and transfer elevator in the world. In the face of numerous obstacles and predictions of failure, he began the erection of an elevator building in the fall of 1842 on the bank of Buffalo River, at its junction with the Evans shipcanal, where the Bennett elevator now stands. The elevator was a success from the start, and Mr. Dart was often offered double his regular rates for accommodation in an emergency. In proof of the saving of time, it is said that the schooner John B. discharged, and received ballast of salt, leaving the same evening; she made her Marquette. trip to Milan, Ohio, brought down a second Mr. Charles W. Evans is the oldest surcargo, and discharged it, and on her return | viving elevator owner in Buffalo, having to Milan went out in company with vessels begun business May 1, 1847.

bushels, June 22, 1843. Dart's elevator unloaded during the first year of its existence 229,260 bushels of grain. The amount of grain and flax-seed handled by the Western Elevating Company in 1887 was 85,-015,957 bushels.

CHARLES A. BLOOMER.

For a quarter of a century one of the foremost men in local elevating circles has been Mr. Charles A. Bloomer, president of the Western Elevating Company and one of the owners of the Exchange Elevator. Mr. Bloomer was born in Scipio, Cayuga

having been Quakers. His early life was passed in Cortland, Seneca, and Orleans counties, to which the family successively removed. Early in life Mr. Bloomer learned the business of a millwright, and in the year 1852 he removed to Rochester with his family to establish himself in that business in the "Flour City." His skill in mill-building, and the business sagacity which he displayed in his chosen calling, brought him to the attention of the leading millers of that day, and about 35 years ago, when through certain financial complications Stephen Whitney of New-York became virtually the owner of a chain of flouring mills located at Oswego, Macedon, Rochester, and Black Rock, Mr. Bloomer was placed in charge of the property, to operate, lease, or sell, at his discretion. While holding this trust he rebuilt the Frontier Mills at Black Rock. In 1856 he became one of the lessees of the Exchange Mill in Rochester, and continued to operate it until 1862, when he came to Buffalo to take charge of the construction of the Exchange Elevator, which was built in that year by William Rankin, Alfred Ely, and Ashley Hall. After passing through various hands, in 1881 this elevator became the property of Greene & Bloomer. In 1885 Mr. Bloomer was chosen president of the Western Elevating Company, which office he still retains.

Endowed with a genial temperament and social tendencies, the weight of years rests lightly on the mind of Mr. Bloomer, and whether engaged in the duties of the office or dispensing the hospitalities of his pleasant home in Orton Place, he is as full of vigor, zeal, and public spirit, with as deep an interest in the future of the city, as though his reputation and fortune were still

PHILOS G. COOK, JR.

Mr. P. G. Cook, Jr., the Secretary and Treasurer of the Western Elevating Company, is one of those staunch, well-balanced young business-men in whose hands the commerce of Buffalo is losing none of the impetus given it by the generation now retiring from the activities of trade.

He was born in Buffalo in December, 1845, and is a son of the Rev. P. G. Cook A considerable portion of his boyhood was passed in other places, but in due time the Bushels. with a partial course in the city High young men in the city.

School. He began his business career at the age of 19 as a clerk in the office of Hiram Niles & Co., forwarders, with whom he remained about two years. His next position was with Jewett M. Richmond & Co., where he served first as an outside The same observer admits, however, that man, and later on as bookkeeper for about ten years. CIGAR MAKING.

Twelve Millions a Year of Good Quality Made in Buffalo:

AREFUL investigation proves that Buffalo men smoke rather better cigars than the average. They patronize home industries largely, and lose nothing by it. Said a prominent manufacturer: "Most of the cigars made in Buffalo are sold here, and they have to be better than if they were sold somewhere else. Besides that, competition is sharp enough here to keep a brand of cigars up to the standard. We can't work up a reputation for a brand and then gradually reduce the quality." The first Buffalo man to manufacture cigars on a large scale was Mr. F. C. W. Geyer, who began business in 1855 in a frame building at the corner of Lafayette and Main streets, where the German Insurance Building now stands. He employed about 30 men, and built up quite a reputation. One of his employees was Henry Breitweiser, who went into the cigar-making business for himself in 1862, and who, with his brothers Leonard and John, now makes more cigars than any other Buffalo firm. There are now 120 cigar manufacturers in the city, among whom the Breitweisers, Joseph Schramm, and Beyer & Rupprecht do the largest business. About 400 men are employed all

On an average 12,000,000 cigars are made here annually. To be sure little Binghamton turns out four times as many, but Binghamton's 50,000,000 sell for little more than Buffalo's 12,000,000. The Binghamton and New-York manufactories are nonunion, while only union men are employed here. Higher prices are paid the Buffalo men and better work is done. The cigarmaker gets \$14 a thousand for a cigar 41/2 inches long, and a dollar more for every one-eighth of an inch added to the length of the cigar. The men earn from \$12 to \$28 a week, according to how nimble their fingers are.

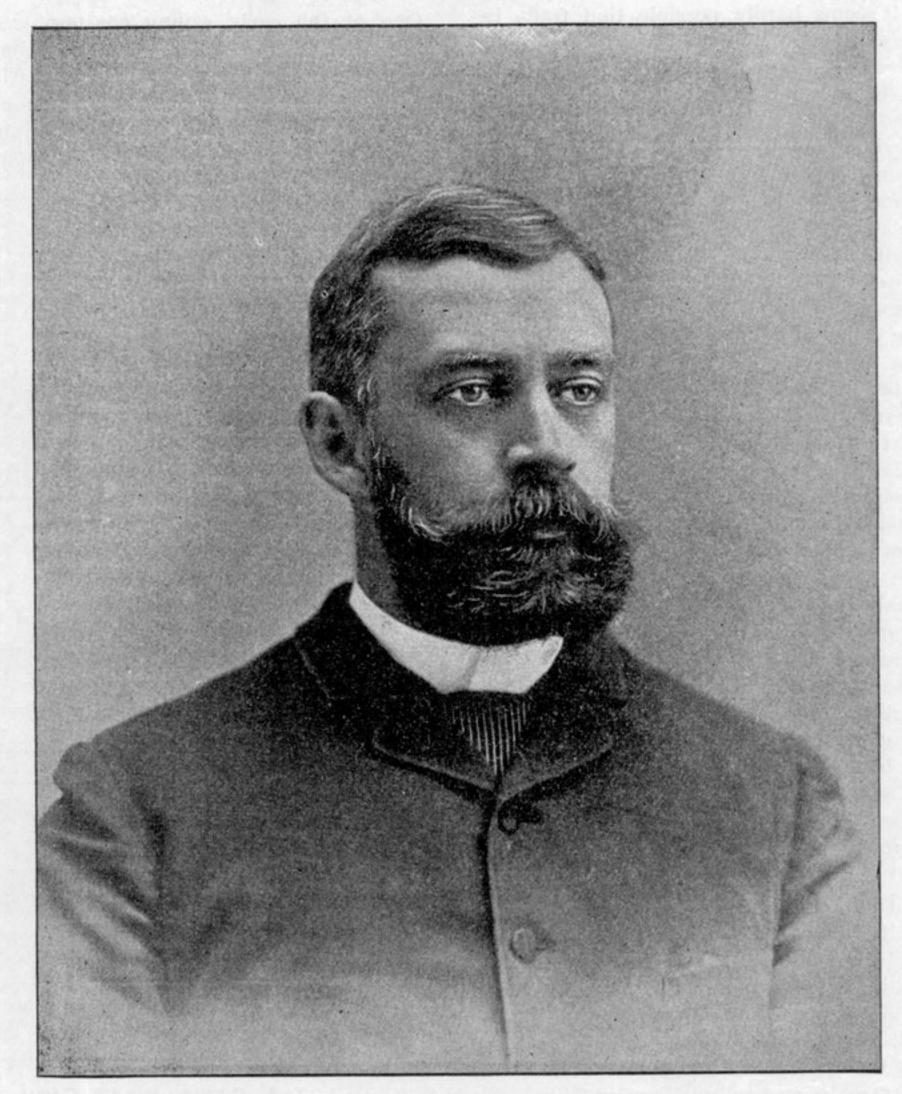

The ratio of ten-cent goods made here to cheaper kinds is fully as large as in any city of the country. No brand made here sells for less than \$25 a thousand.

The raw material used is Connecticut, Sumatra, or Havana seed for wrappers and an Havana filler. The general belief is that a Connecticut leaf wrapper makes a better cigar, although it doesn't look as well as Sumatra.

There is a fashion in cigars as in everything else. One thing noticed is that the flavored species of weed is going out of style. The five-cent cigar is as popular as ever-popular with more people than are generally known, a manufacturer says. A man comes into the store with a friend and wants a ten-center, but when he comes in alone he usually buys the five-cent variety. the man who always buys ten-cent cigars

came familiar with all the details of the it, while the five-cent man doesn't. HISTORY OF THE ROADS.

Enormous Cost and Earnings-Mile-

age in the City Limits.

BY PHIN M. MILLER.

DUFFALO is at the end of eleven rail-D roads, the shortest of which has 346 miles of track. In addition to these, there are four others that are wholly within the city limits. Of the first, there are nine that are trunk lines, and do the greater portion of all the freight and passenger business for the portion of this country between Boston and New-York in the east and Cincinnati, St. Louis, and Chicago in the south and west, with the addition of the extensive and rapidly increasing carrying business to all that portion of our country west and north to the Pacific coast and the valley of the Columbia. The fifteen railroads that have a beginning or ending in this city have within the city limits 638 miles of road-more than in any other city in the

world. The money investment in railroads within this city's corporate bounds is \$67,990,384.

The total miles of track in use by the roads which touch Buffalo is 17,539, all of which are in operation and constantly employed in the carrying of freight and passengers to Buffalo, for the use of the city and for shipment to other points by way of its various routes, by lakes, canal, and railroads.

The total earnings of these roads for the year 1887 were \$128,061,746.

The cost of this wonderful network of roads was \$1,209,752,311.

When it is remembered that Buffalo is at the terminus of all the roads doing this business and representing this wealth, the reason why Buffalo is, and always will be, the great railroad center of the country, and why its railroad interests, already gigantic, will continue to increase, will be understood.

At their market value the railroad plants within the city limits of Buffalo are to-day worth and would sell for \$100,000,000. Who can estimate what they will be worth in ten years?

All this in a city where the first effort at railroading was made in 1834 over a dis-

Railroad Beginnings.

Legislature on the 14th day of April, 1832, on which date were incorporated two companies. The Buffalo & Erie Railroad Company, whose road was to run from Buffalo through the counties of Erie and Chautauqua to the State line of Pennsylvania, and the Buffalo & Aurora Railroad Company, to run from Buffalo the main line of the New York & Erie. to the village of Aurora, now known as East Aurora. These roads were not unlike the bumble-bee, biggest when first hatched; and lived and died on paper. The financial squeeze of 1837 was the deathblow to both projects.

The first railroad actually built in the city was the Buffalo & Black Rock Railroad. This road was in working order in 1834. It was three miles in length. While it was called a railroad, it was little more than street-railroad, the cars being drawn by horses.

The first railroad operated by steam-power in this city was the Buffalo & Niagara Falls. On the 26th of August, 1836, the first loco-

put on the road at Black Rock and ran ran from Buffalo to Tonawanda, and on the 5th of November trains began running regularly from Buffalo to Niagara Falls.

several "talked of" roads, and the next one completed was the Buffalo & Attica Railroad, which ran from this city to the village of Attica in Wyoming County, a distance of 31 miles, and was opened for travel on the 8th day of January, 1843. This was the beginning of the present New York Central

road in Western New-York. The next road actually constructed in this county was the Buffalo & State Line, from this city to the State line of Pennsylvania. This road was opened for travel from Buffalo to Dunkirk, a distance of 40 miles, on the 22nd of February, 1852, having been opened from the State line to Dunkirk, a distance of 33 miles, on the first of the previous month.

The same year the Buffalo & Rochester Railroad Company (which had been formed in 1850 by the consolidation of the Buffalo & Attica Company with the "Tonawanda" Company, whose road ran from Attica to Rochester) built a direct line of road from Buffalo to Batavia, a distance of 36 miles,

uary 1, 1873, and is now known as the earnings were \$3,203,317. from that place to Tonawanda at the Buffalo division of the Western New York "great speed of fifteen or twenty miles per & Pennsylvania Railroad. The Pittsburg formed by the consolidation of the Buffalo hour." On September 6th the locomotive division of the road extends from Buffalo to & State Line with the Erie & State Line, Oil City, a distance of 140 miles. The Erie & Cleveland, and other roads, extends Western New York & Pennsylvania system from Buffalo to Chicago. It has 2,155 is composed of these two and the Rochester, The financial crisis of 1837 put a stop to River, and Narrow Guage divisions, having a total of 826 miles of road, costing \$50,-

The latter leased this line to the New-York The first charter to build a railroad in & Erie road, already built from New-York to Buffalo was the result of the action of the Dunkirk. This road built a branch 60 miles long, from Hornellsville to Attica, thus forming a continuous line from Buffalo to New-York, which was opened in 1852.

In the same year the Buffalo & New York City Company opened a line from Buffalo to Batavia, thence eastward to Avon, thence southeast to Corning, there connecting with

The Present Roads.

The Buffalo & Brantford road was begun in 1852 and was completed to Brantford, Ontario, a distance of 76 miles; an extension of the line was made to Goderich on Lake Huron, a distance of 160 miles from Buffalo, and the name of the road changed to Buffalo & Lake Huron Railway, in June, 1858. On the first of July, 1868, it was leased in perpetuity to the Grand Trunk Railway Company, and is now operated by the Grand Trunk system, as is the "Air Line" or "Loop Line" from Fort Erie to Glencoe, a distance of 145 miles and forming a portion of the "Grand Trunk," which has 2,911 miles of track, costing \$258,457,-582, and whose gross earnings for 1887 were \$15,000,000.

In 1855 the Buffalo & Niagara Falls Railroad was purchased by the New York Central Company. The Central road, of which

.Hamburg

Buffalo is the terminus of the great trunk lines of roads from the east and from the west. It is also the terminus of the great roads that reach the vast lumber, coal, and oil fields of Pennsylvania. It is the outlet of over one thousand miles of road reaching the most valuable and productive coal, oil, and lumber supplies in the world. It is the common centre between the east and the west in the passage of all freight by water and of much that is transported by rail. It is the transfer point of all the products of coal, oil, and iron from rail to It is the eastern home of every boat on the four great lakes. When the west and northwest shall become as thickly populated as Western New-York, Buffalo

NEW UNION DEPOT.

Plans for Giving Buffalo the Finest American Railroad Station.

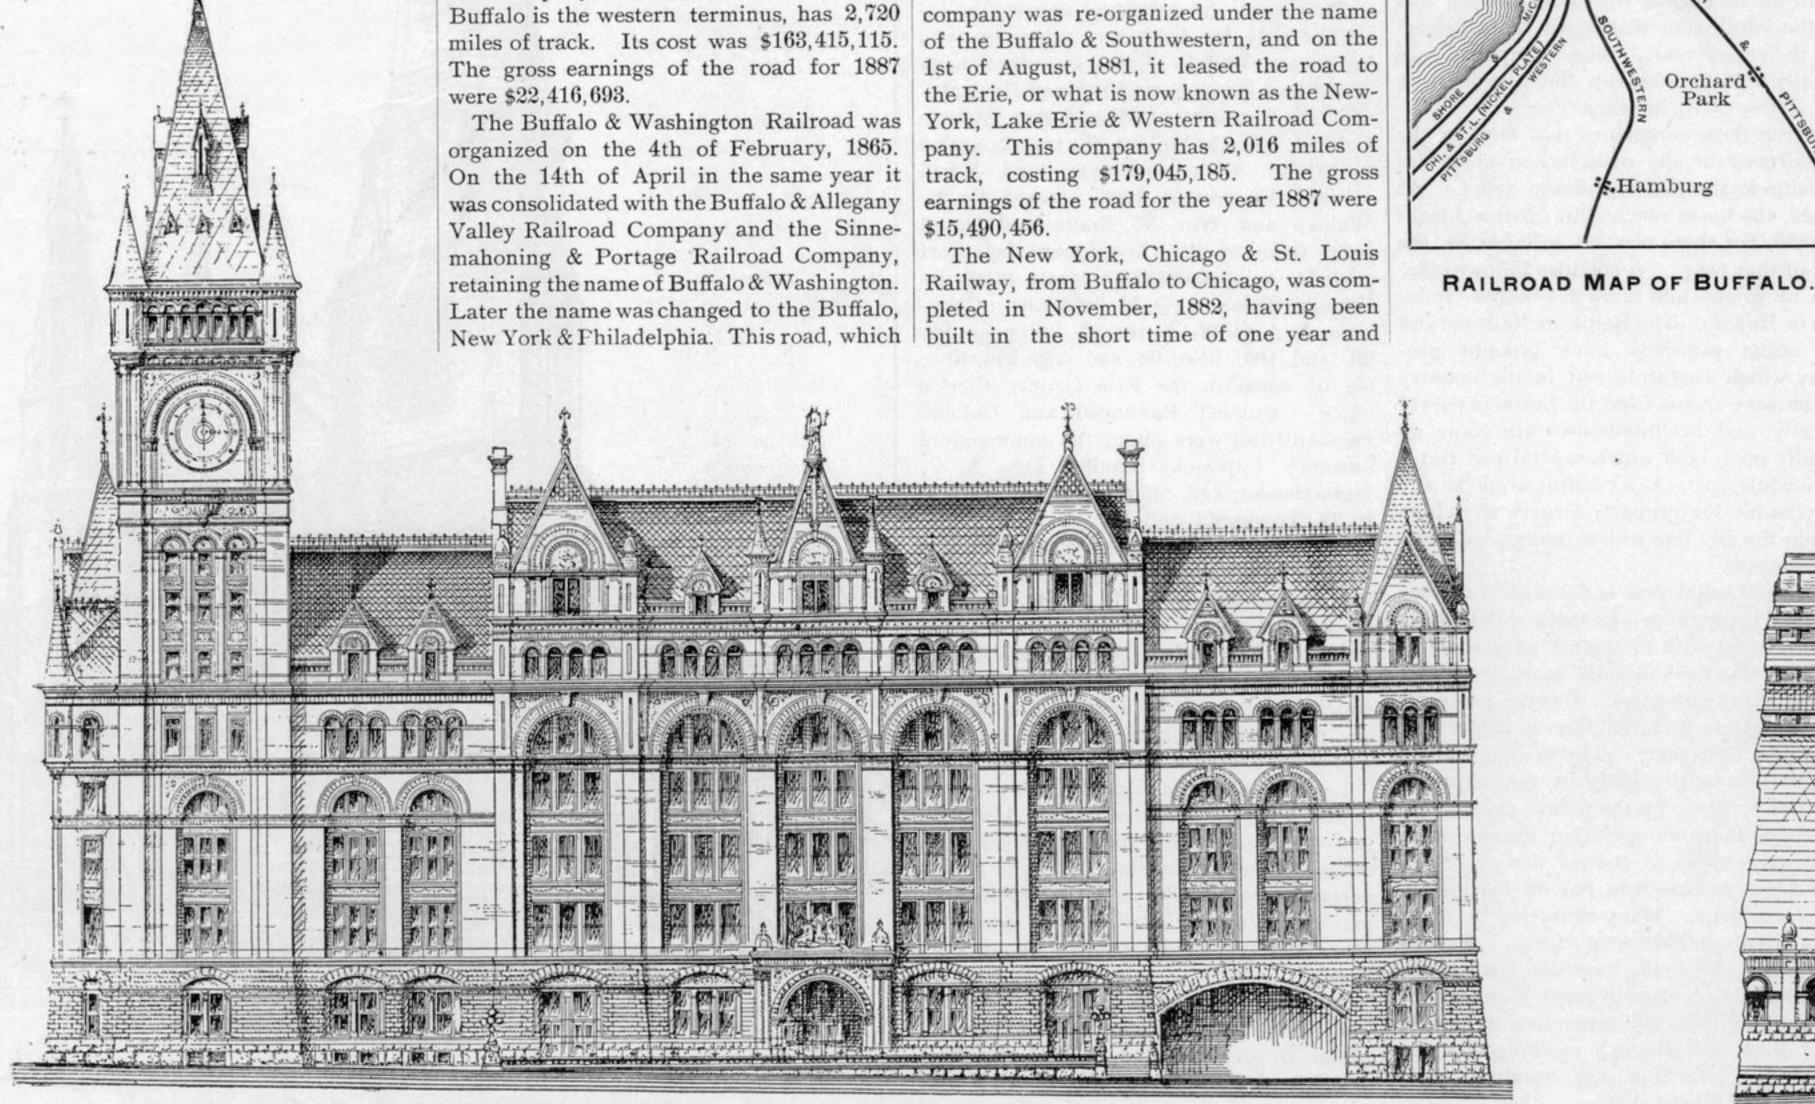

The efforts to solve the grade-crossing problem in this city have resulted in a grand scheme which has been authorized by legislative enactment, and will be brought to a speedy fulfillment. The plan was prepared by Mr. C. W. Buckholz of the Erie Railroad, from whose drawings the accompany ing illustrations are made. The total cost of the projected improvement is estimated

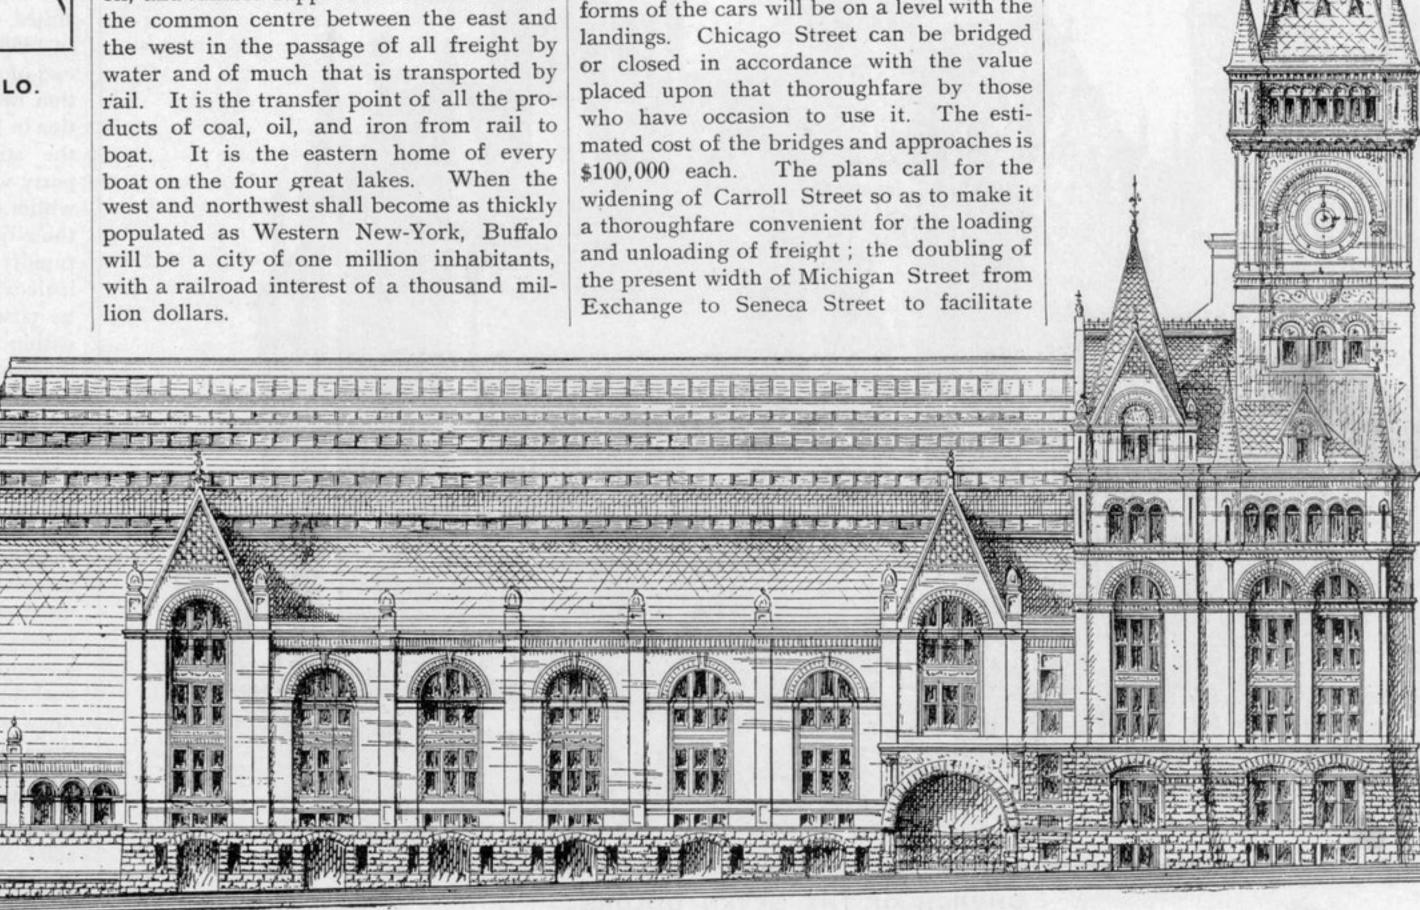

at between \$2,000,000 and \$3,000,000. In accordance with the plan the roads entering the city will approach their terminus by a common route, the tracks of which will cross the streets east of Louisiana Street above grade, but run under Louisiana, Chicago, and Michigan streets. Those thoroughfares will cross the railroads by wide over-head bridges, extending from Seneca Street across the Hamburg Canal. The tracks are to run into the Grand Union Depot, which will front on Washington Street at the corner of Exchange. West of the depot the tracks of the New-York Central will cross Washington and Main streets below grade, coming to grade on the Terrace about opposite the foot of Franklin

It is proposed to begin the depression of the tracks at Van Rensselear Street and continue the descent until a level is struck two feet below the present grade at Louisiana Street. This level will be continued to Michigan Street and thence carried into the Train-house at such a grade that the platforms of the cars will be on a level with the placed upon that thoroughfare by those who have occasion to use it. The estimated cost of the bridges and approaches is widening of Carroll Street so as to make it a thoroughfare convenient for the loading and unloading of freight; the doubling of the present width of Michigan Street from Exchange to Seneca Street to facilitate

heavy traffic; the abandonment of the horse-car tracks on Exchange Street east of Michigan Street, and the confiscation of the Continental Hotel property and the other buildings on Exchange Street opposite the Washington Block and on the east side of Washington Street between Exchange Street and the Hamburg Canal.

The Passenger Station provided for in Mr. Buckholz's plan merits description in detail. It will be the finest Passenger Station in the United States, with a Train-house more capacious than any other in this country, if not in the world. The Washingtonstreet elevation represents an ornate brick and cut-stone building, with a frontage of 300 feet, seven stories high, covered by a mansard roof with numerous dormer windows, and over-topped by a massive clocktower over 200 feet high. A paved plaza 100 feet wide separates the building from the street proper. Over the main entrances is a broad porte cochere, and to the right of this, about 75 feet further south, is a massive arch from which emerge the double tracks of the Central Belt Line and the Niagara Falls branch. The Exchange-street elevation drops to three stories after pass-

ELEVATION ON EXCHANGE STREET.

ing the tower and continues for 300 feet. Beyond this stretches away the mammoth Train-house for 500 feet more. A heavy archway securely gated on this side fur- The nishes an exit for all passengers leaving the depot. Some of the express and baggagerooms are on this side, and the other express and baggage-rooms are in the corresponding building on the canal side of the station, which is separated from the canal by a driveway of ample proportions. The ground plan of the passenger station shows ing-room, 37 by 81; a spacious ladies' room; wide hallways extending up to the roof to afford light and ventilation; a grand staircase leading to the regions above from the hall on the right of the general waitingroom; four elevators; a spacious ticket-ofwaiting-rooms and the Train-house.

On the second floor is a restaurant, while all the floors above are given up to offices of the railroad companies making use of contains baggage-rooms, express-rooms, a store-room, and a kitchen, with offices on the two floors above.

The north wing, on the Exchange-street side, contains baggage and express-rooms only on the ground floor, with offices above.

The plans for the Train-house call for a grand arched structure, 108 feet high in the center and 280 feet wide, with 14 tracks and eight broad platforms between them. To appreciate the size of this building, it is only necessary to state that the Trainhouse of the Grand Central Depot in New-York is but 140 feet wide, while the present New-York Central Train-house in this city and to-day the real estate that they so few men in comparison to the population, measures less than 100 feet from wall to carelessly flung away represents large for- and these owners of the soil did very little

there are so few strikes in Buffalo."

The method of the company is this: railroad center in the country; connecting price down, and give a mortgage for the labor in the country, while its summer cli- The land is divided into lots and sold on the installment plan, the buyer paying \$10, pay a certain sum, usually \$5 a month, thereafter, till his lot is paid for. If he neglects his payments for a specified time, generally three or six months, the property reverts to the land company, together with the payments already made. There are, however, very few delinquents who lose their land. The companies find that it pays to be generous. So far not 5 per cent. of all the thousands who have bought lots on the installment plan have fallen behind in their payments. The companies are usually able to wind up their business in

It is to these companies that land in the outskirts of the city owes its marvelous rise by Main, Allen, Delaware, and North in value in the last half-dozen years. As stated, the boom reached its greatest height in 1886, but there was no collapse at the end of that year. A collapse follows inflation of prices, and there has been no inflation in Buffalo. The Belt Line Railroad and the street railroads have brought property which used to be out in the country within easy access from the business part of the city, and dwelling-houses are going up rapidly upon land which was farmed but a little while ago. As a result it would hardly Heintzleman, and Silas Casey and Lieuts. be possible for property-owners anywhere within the city line to lose money on their

the land companies, and most of them have selling many more lots. But the prospects are thought to be bright for a bigger sale than ever next year. The savings and aid associations help greatly in the improvemeans of these co-operative organizations a man is enabled to borrow money on his real estate and use it to pay off his installment mortgage. Many of the land associations are also building associations. Especially is this true on the East Side, the associa- Porter. tions building houses in great numbers for the working men, the latter usually paying \$300 down and giving a mortgage for the remainder. In this way hundreds have been provided with homes.

Buffalo has grown rapidly, and the value of the natural facilities. They have con- of her real estate has kept pace with her centrated roads, trestles, wharves, and con- growth. The prices of land in the business struction shops here to the great advantage portion of the city will show that better of the city. Another important factor has than anything else. This city is a good been the development of the oil interests of place to buy land, year in and year out. There are few fictitious values, and the rise gaged in that business have come here and in prices is usually steady and strong. have invested their profits in our real estate, Many men have realized great profits in a and have established extensive new indus- very short time, but generally such cases were caused by some unexpected improvement of the land.

Buffalo city bonds float easily, and though Cleveland, at from \$1,200 to \$1,500 per mium; improvements have been extensive foot with a depth of 1000 feet, while the in recent years, and numbers of capitalists from other cities have been attracted by the comparatively low price of land. All these things have contributed to the "boom." ness property. While real estate in Buffalo The great rise in the price of land in the outskirts of the city brought up prices "down-town." Large gains have been made and are being made in land on Ferry Street and Richmond, Howard, Ashland, and Glenwood avenues, and on "the Hill," as the neighborhood of the Niagara Hotel is called. Land on Front Avenue above Richmond Avenue which sold for \$40 a foot six years ago, now brings \$150; property on Bouck Avenue which sold for \$18 or \$20 before that avenue was paved with asphalt three years ago now sells for \$50 in some places, and near Delaware Avenue for even \$70; Walden Avenue land which brings \$30 a foot now sold for \$8 before that street was paved four years ago.

FORT PORTER.

city. Most of it has been cut up into lots Its History and Condition - It has Never Been Armed.

INFANTRY.

CORT PORTER is pleasantly situated within the city limits of Buffalo, on the right bank and near the head of the Niagara Washington, altitude 600 feet. The post is on grounds belonging to the United States, acquired partly by purchase and partly by cessions by the State of New York. These grounds comprise about 281/2 acres, about half of which is generally used for the purposes of the post; that occupied by the buildings is elevated on a bluff some 60 feet above the level of the river, and about 200 yards distant. The location is considered very healthful; and it commands a fine view of Lake Erie, Niagara River, the Canada shore, and a portion of Buffalo.

At the foot of the bluff mentioned passes the double track of the Niagara Falls branch of the New York Central & Hudson River Railroad (constructed about 1852 and 1853, and originally known as the Lockport & Buffalo Railroad), and between the railroad and the river is the Erie Canal. Before this railroad was built and operated the Buffalo & Niagara Falls Railroad, built about 1836, ran by the Fort along Sixth street, now generally known as Front Avenue. Street cars run within two blocks of the post, affording ready facilities for reaching

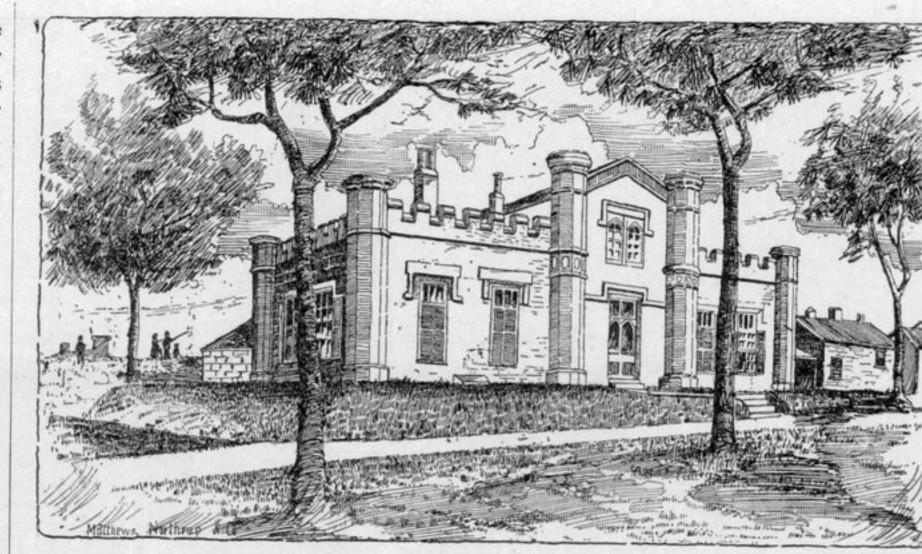

any part of Buffalo or Black Rock. The Fort Porter grounds were formerly within the corporate limits of what was known as the south village of Black Rock, but some 30 odd years ago it became a part of, or was absorbed into, Buffalo, and remains so still. The specific reason, if any, for establishing Fort Porter is not entirely clear. It has been surmised that the "Patriot War" in Canada about 1837, and the later troubles about the Northwestern boundary lines, in both of which the United States and British governments were somewhat unpleasantly if not threateningly involved, may have been considerable factors in regard to the matter. At any rate, previous to the locating and building of Fort Porter there were no permanent defenses on the United States side of the Niagara River except Fort Niagara at its mouth. It is said that during and for a while subsequent to the War of 1812 there were some temporary redoubts along the river, but these have long since disappeared. One of these was Fort Tompkins-named in honor of Gov. Tompkins of this State—and was situated on the bluff above the present Buffalo Water Works between or about Front Avenue and Seventh Street, within a few hundred yards of old "Fort Porter." The Historical Society of Buffalo has a 12-pound shell that was supposed to have been fired from Fort Erie into Fort Tompkins in the War of 1812, and which was discovered a few years ago about two feet under ground in the vicinity

After the fall of old Fort Erie on the Canada side, and after the battle of Lundy's Lane in 1814, the troops in and around Buffalo were encamped near the present site of Fort Porter. It might appropriately be stated here, as rather tending to support the reasons or surmises already mentioned why Fort Porter was established, that soon after the "Patriot War"-about 1838 or 1839—and before Fort Porter was really determined upon, a garrison of troops was established in Buffalo, and retained for some six or seven years, until probably Fort Porter was so far advanced as to become a fixed practical fact; or perhaps the border troubles became less a matter of serious

This post, or garrison-apparently intended only for temporary purposes—was known as Buffalo Barracks-some have stated that it was named Poinsett Barracks, after the Secretary of War in Van Buren's Cabinet. It was built on the tract bounded streets, the ground being owned by E. Walden and Wm. W. Smith and leased from them by the Government for short periods, as appears from leases made by Captain Ogden, A. Q. M., and Lieut. Chapman, A. A. Q. M., as recorded on pages 98, 99, and 100, liber 62, and page 314, liber 63, of deeds in the Erie County Clerk's office. Colonel Bankhead and Colonel Bennett Riley were among the commanding officers; Captains Hannibal Day, S. P. E. D. Townsend and W. P. Barry, who attained prominence in the War of the Rebellion, were some of the other officers. A Presidential year is not a good one for Six companies—A, C, D, G, H, and K of the 2d Artillery were the garrison about been content with the monthly installments | 1840 and 1841, and in 1844 it consisted of of those who have already invested without four companies of the 2d Infantry, about which latter year it is supposed the temporary post was discontinued; after which it was never occupied.

Except during the War of 1812, previous ment of property by the poorer classes. By to about 1838, when the Buffalo Barracks just mentioned came into existence, it i thought there is no military history or annals pertaining to Buffalo, and that what there may be is comprised within the past fifty years and principally centres about Fort

Mr. Ross is prepared to furnish all of the requisites to fine finishing work on buildings and machinery. The best quality of plastering hair to accompany his famous lime; material for setting up boilers and furnaces; colored and fancy finishings for hard walls and ceilings; blackboard preparation, and everything essential to successfully performing any fine piece of mason or plaster-work. To those desiring to purchase articles of this nature, we recommend a visit to No. 141 Erie Street. All orders will be promptly filled, and all may rest assured that their wants will be supplied in a satisfactory manner both in regard to material and price.

STEAM FARMING.

How Buffalo Provides the Means for it.

Almost Everything Done by Machinery in the Wheat Country.

THE one art upon which the structure of society is absolutely dependent is that of agriculture. The railroad, the canal, the locomotive, and the steamship are but the instrumnts by which that art is extended or by which the results of its extension are made available. For one who has never given the subject more than passing attention, it is difficult to realize how intimately connected are the varision with the prosperity of the agricultural

But if society is dependent upon the

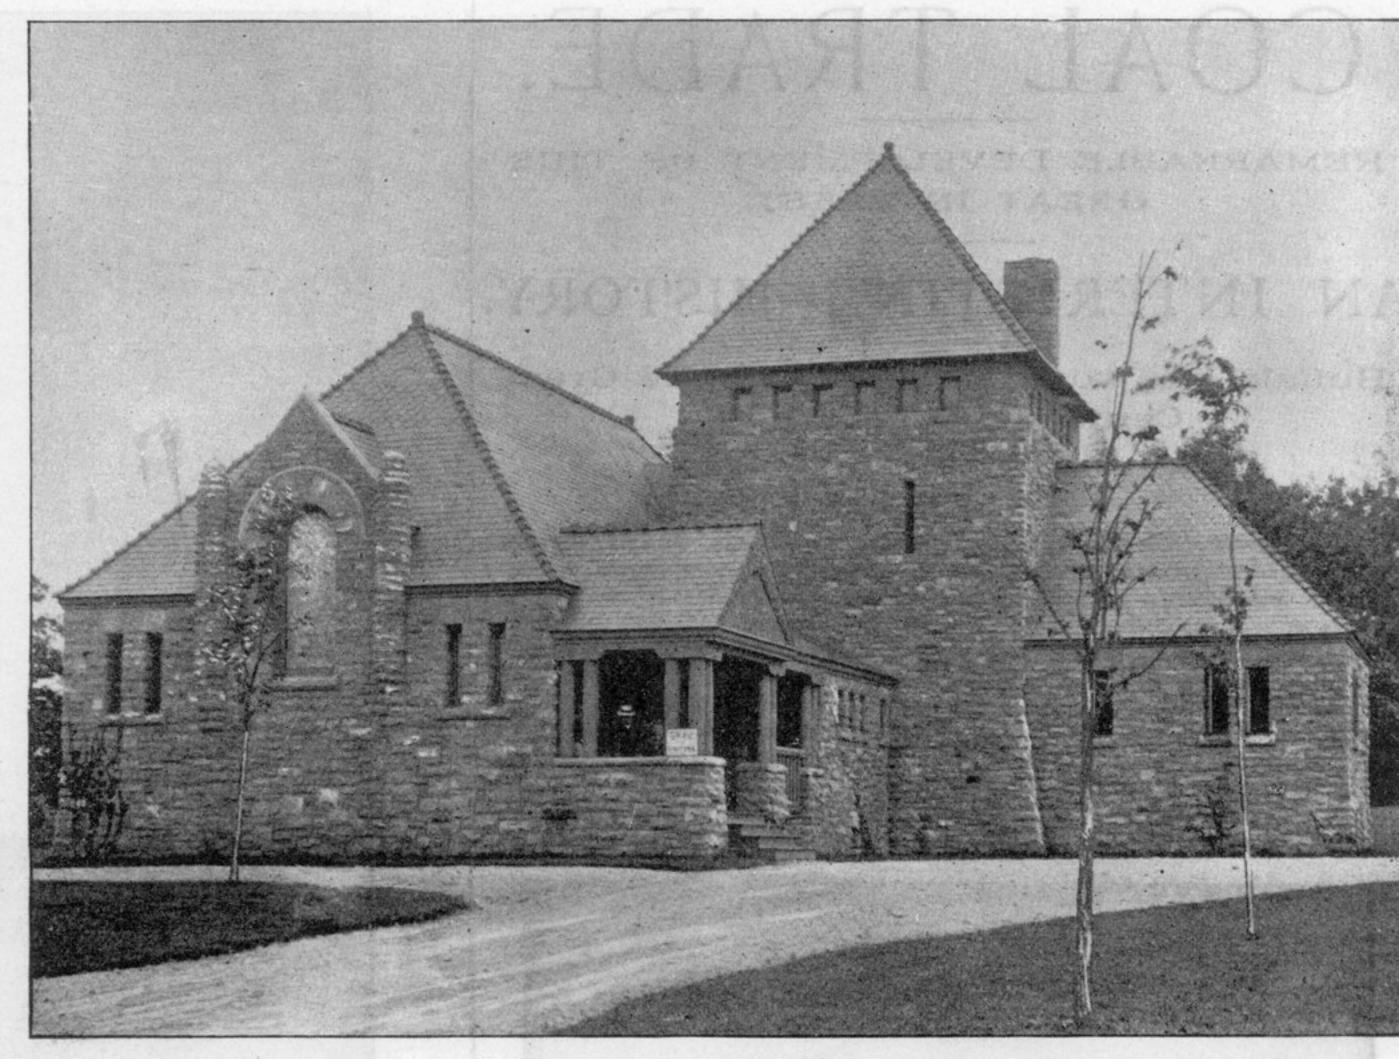

seen a picture of a wheat harvest on one of the bonanza farms of the West? The miles of waving wheat; the great reaping machines cutting swaths a dozen feet in width and binding the grain and throwing it out upon the stubble with wonderful rapidity and precision; the threshing-machines in the distance, each coupled by a glistening, speeding belt to an attendant engine; the busy threshers crowding the never-ending stream of bundles into the maw of the insatiate machine; the loads of grain constantly arriving and discharging; the long rows of bags filled with the perfectly cleaned grain the puffing engine throwing a long, lazily curling ribbon of smoke upward against the horizon; and around and over all a glowing sky, filled with the soft, smoky, haze of the midsummer - who has not seen such a picture?

And have you seen the engines, which a little while ago were used to run the threshing machines, engaged in plowing? Have you seen a traction engine drawing a gangplow, which turns up a strip of land a rod wide as it goes along? Have you seen the same engine taking the grain to market, drawing a dozen lumber-wagons, each one carrying 75 bushels of wheat, all moving THE success of the builder's trade de- slowly and steadily along like a file of pends in great measure upon the quality | trained soldiers? These things may all be all the parts of a structure shall be of the same engine which has been used to thresh machines. The farmer who possesses but a few hundred acres frequently owns one, and makes it a source of profit. As we come farther East the same machine is employed for even a greater wariety of uses. A neighborhood sometimes keeps one at work continually. The portable saw-mill, the driven-well, the threshing machine, the quarry pump, the cider-mill, all these are

> employers of the traction engine. The farmer of the far West as well as his Eastern brother has long looked upon Buffalo as the city from which agricultural imof her industries and the character of her manufactures in this very important line.

> Among those institutions which have become world-famous by reason of their products, the Pitts Agricultural Works stands at the head of the list. These works were established by John A. Pitts in 1851. Mr. Pitts was the inventor of the grain thresher, and the success of his machine encouraged him to begin its manufacture. The threshers of that day were all operated by horsepower, and when the new machine was introduced, and was seen by the farmers threshing and cleaning 400 bushels of grain a day by the labor of ten or twelve horses, it was said by the knowing ones that the genius of invention could go no farther and that threshing had now reached perfection. The invention of the threshing-machine marked the beginning of a development in agriculture such as had not been dreamed

The flail was displaced, never to be utilized again; the hardest task in preparing the grain for consumption had been simplified; the sickle, the scythe, and the cradle soon disappeared, the reaper became the harvest implement of the world, the milling industry was revolutionized; roller-mills reproverbial miller; the grain product of the the invention of the thresher, and more | Charles Kamper. particularly of the steam thresher.

THE BUFFALO CREMATORY.

its success assured, when Mr. Pitts died Cemetery. It can be reached in half an in 1859. Mr. Pitts was succeeded by his hour from the City Hall. It is a handsome All the surroundings manifest respect for son, Mr. John B. Pitts, and his son-in-law, Mr. James Brayley. These gentlemen continued the business under the firm-name of like a small basilica or mediæval chapel than Brayley & Pitts, and with a success as de anything else. Its chancel is decorated in noiselessly from sight. The crowd then cided as it was deserved. For nearly 20 | the early Italian manner. The windows of years the business grew steadily. shops were enlarged from time to time, new machinery and new devices were introduced, the thresher was improved from year to year, and when the firm was dissolved in 1877, and "The Pitts Agricultural Works" incorporated, the evidence of by the customary transit and burial permit, that prosperity which comes from intelligent management and the manufacture of reliable products was unmistakable. The capital stock of the new corporation was \$300,-000. For the next two years the progress of the company was even greater than had been that of the antecedent firm. The steam-thresher was already a standard machine, and the labor of experiment was now ended. In its place was substituted the labor of introduction. The American farmer was quick to see the advantage of the new thresher; he adopted it as soon as possible; the foreign agriculturist was equally desirous of adopting it, and it was rapidly being introduced into other countries

The work of rebuilding was begun immediately, and by the ensuing February the that the fire at the bottom distils the wood works had been replaced, an entire new plant put in position, and everything made ready for continuing to supply the great trade which had been established.

when, in July, 1879, the whole establish-

ment, with its plant of machinery, patterns,

tools, and appurtenances was destroyed by

The works now cover four acres of ground and comprise one of the most exten-

sive plants in the country. Besides the foundry, there are blacksmith, machine, wood-working, engine, and paintshops. No firm of similar character in the country has a larger outfit. The capacity of the works and the value of the annual output can best be determined by the statement of a few related facts, Over 300 men. are given steady employment by the company, and of this number the majority are skilled workmen. They turn out upwards of 800 threshers and over 400 engines a year. The Pitts Engines and Threshers have been introduced into every country on the globe, and it is not too much to say that the Pitts machinery is more widely known than any other of its class.

The company build a variety of engines,

both common and traction. They also

manufacture a species of semi-portable en-

gine for light work, both agricultural and manufacturing. These engines are manufactured with especial regard to economy of amount of power. They will burn coal, necessary being the changing of the grates. would be difficult for us to describe. They are made as light as is compatible with durability, and are specially calculated to stand the wear and tear resulting from use in a rough country. They are noteworthy for simplicity, meatness, capacity for a large amount of good work, and for cheapness. There is little more to be said. The intending purchaser cannot do better than go to the Works at the corner of Carolina and Fourth streets and examine these incomparable machines and engines for himself. he cannot go he will do well to send for the catalogue of the company and obtain full information from the most authentic source. We have seen how from a small beginning the Pitts Agricultural Works have been developed. The work begun by John A. Pitts has gone bravely on. The horsepower has given place to the steam engine, and the Pitts threshers and engines are now known throughout the world. On the prairies of Dakota and all the Western United States, on the steppes of Russia, on the plains of the Spanish highlands, in the Australian grain region, in the fertile fields of New-Zealand, on the flower-studded pampas of the La Plata, and wherever improved methods in agriculture have obtained there may be heard the whistle of the Pitts

The Crematory building is situated on

The industry had been well begun, and | Delaware Avenue, fronting Forest Lawn building of red sandstone with a square the dead and regard for the feelings of the tower and slanting roof. It looks more living, and are entirely unexceptionable. The rich stained glass diffuse through its interior in strict privacy; after which the underthe "dim religious light" so appropriate to taker receives the ashes, which are either

funeral scenes. The conditions required for cremation are simple, and as follows: Each body intended for cremation must be accompanied physician. The body should be dressed as simply as possible, and should be enclosed in a plain and cheap coffin. Both expensive clothing and coffins are to be avoided. Bodies may be sent by express, and will be received by the company, provided the proper certificates and remittances are sent in advance. If it be desired by the friends that the incineration should be conducted privately this will be done.

The system of incineration adopted at the Buffalo Crematory is known as the Venini System. Briefly described, it is as follows: In the basement is a gas generator which is a fire-pot four feet deep and two wide. The air for combustion is admitted through a grate at the bottom, but is not sufficient to allow of the combustion of the entire mass of small wood which is put on the fire. The necessary result of this arrangement is at the top; then the gases of combustion and distillation of wood are carried to the back end of the incinerating chamber, which is on the floor above. Here these gases are met by air heated in a chamber outside the furnace, where the two are ignited by a fire which is kept burning just under their point of union. The Bunsen flame thus produced is thrown quite across the incinerating chamber, and thence is carried by a flue into the basement, thence to a chimney 40 feet high, and so out into infinite space. The Bunsen burners, thus playing directly on the body, liberate the gases of the body, which gases, being burned in the retort, are conveyed to the flues beneath, and here another Bunsen flame ignites such material as has not been consumed in the retort; while at the foot of the chimney a third burner finishes the process of combustion.

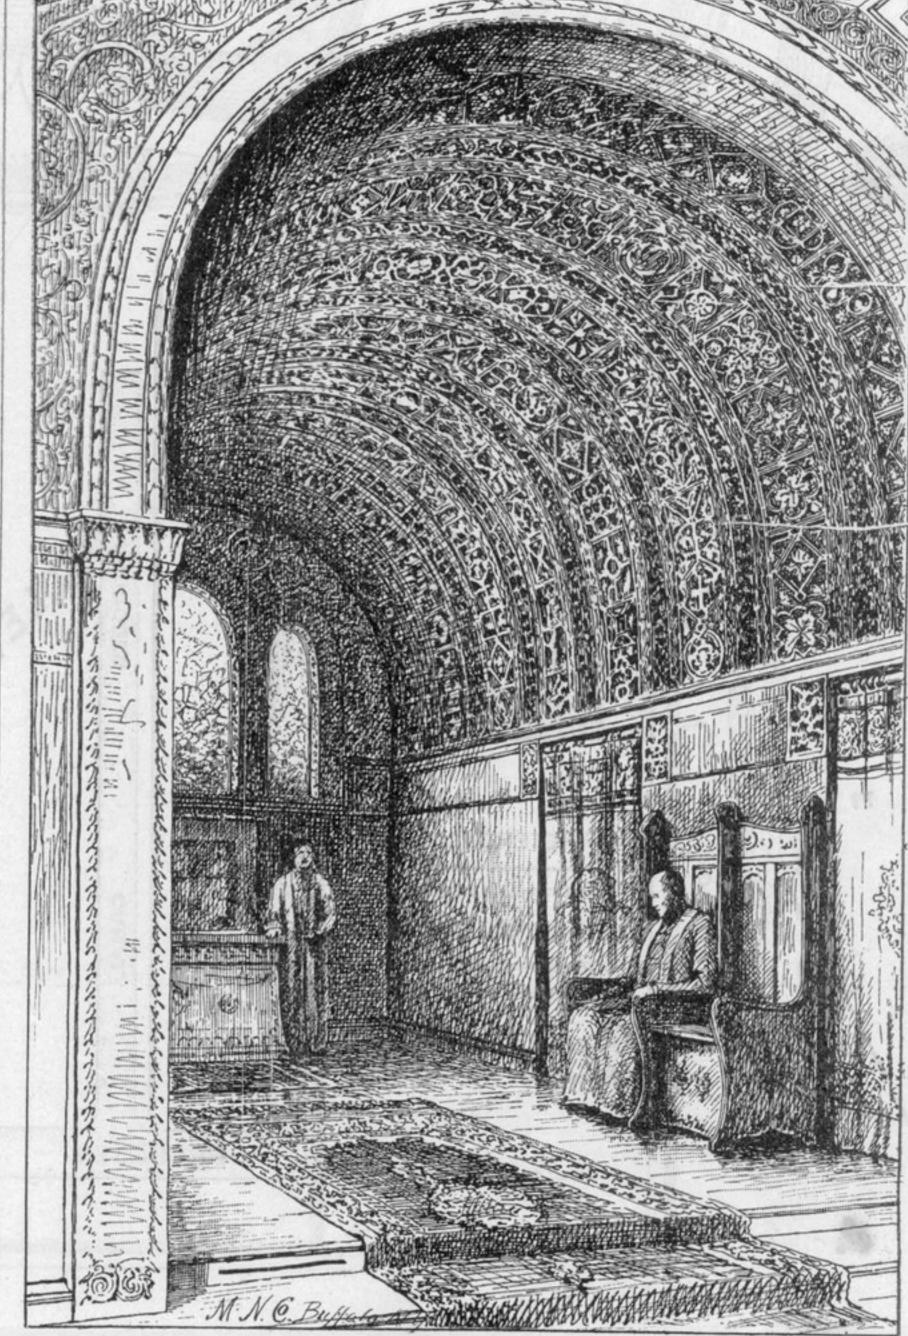

The actual ceremonies which take place at the incineration of a body are about as follows: Let us suppose the hearse to convey the body to this Temple. The undertaker removes it from the coffin and places it on a bier, as is done at an ordinary burial. the rooms of this temple of incineration. fuel and space, and to securing the largest | The clergyman passes behind the organ to wood, or straw, either separately or in any silently into the chancel (moved by machincombination desired, the only alteration ery) and the organist begins the prelude to a funeral chant. The ceremony is then They generate steam rapidly, furnish their | continued in accordance with the wishes of rated power, and are in all respects trust- the survivors. The surroundings and genworthy and economical. The threshers it eral appearance at this stage present very slight differences from an ordinary funeral.

The chancel is a pleasant spot, being beautifully decorated in the Italian style,

The service finished, the bier glides disperses, and the incineration takes place buried (as the body would have been) or else are left to form the nucleus of a columbarium. For those so desiring, urns are furnished by the company, in which the ashes may be deposited, as was done by the and also by the affidavit of the attending ancient Romans. These urns can later on be placed in a marble vase or sarcophagus, or may be left in the temple pending the decision of the relatives and friends. The urns furnished by the company are plain or decorated, according to the survivors' wishes, and made of terra cotta with or without zinc lining. Some of them are extremely graceful in design. They cost from \$5 up. The company's fee for the inciner-

> It will be seen by this description that cremation does in no manner do away with funeral rites or ceremonies. These remain unchanged. At the end of one hour the mortal remains deposited in the cremation furnace are just what they would be at the end of many years in the grave; simply that, and nothing more - nor less. In fact, cremation is merely a hastening of the processes of nature. That it is pretty certain sooner or later to supersede earth-burial is reasonably sure. Sanitary science demands this change, which, by the way, is not so much (as many believe) a new process as a return to an old one, for both the ancient Greeks and Romans practiced cremation, and so did other ancient peoples. Looking at the process with an unbiased eye, cremation merely accomplishes quickly and pleasantly what earth-burial does slowly and loathsomely. If objectors to the system would merely fix this one fact clearly in their minds, it would serve to rid them of much misapprehension and of many fantastic and idle fancies.

The first incineration at the Buffalo Crematory (the test case) occurred on December 28th, 1885; the last, up to the present writing, was less than a month ago (July). Since the opening of the Crematory there have been forty incinerations. Of this number a little less than one-half were residents of Buffalo; the residue came from various places, near and far. The number of cremations is said by those in charge to be steadily increasing. There is no reasonable doubt that the opening of this Crema-Meanwhile the relatives and friends enter tory, and its being kept open at all times to the Crematory chapel, which forms one of public inspection, have had a marked effect in doing away with the natural and acquired horror connected in the popular mind with take his place in the chancel. The bier rolls the subject. It is becoming better understood. Fewer farmers now speak of "crematory butter," and a less number regard the word crematory as a euphemism for oleomargarine factory. In short, ignorance and prejudice (those hydra-headed monsters) have by the opening of this institution received a severe blow.

This was a gravity road, having a abandoned, the coal being transported by descent of 100 feet to the mile, the mules rail. In 1855 the Lehigh Valley Railroad

> The success of the Delaware, Lackawanna & Western Railroad Company is due to the indefatigable energy of its president, Mr. Sam Sloan, who has been ably supported by Mr. E. R. Holden, for many years its General Sales Agent, and now the Second Vice-President of the company.

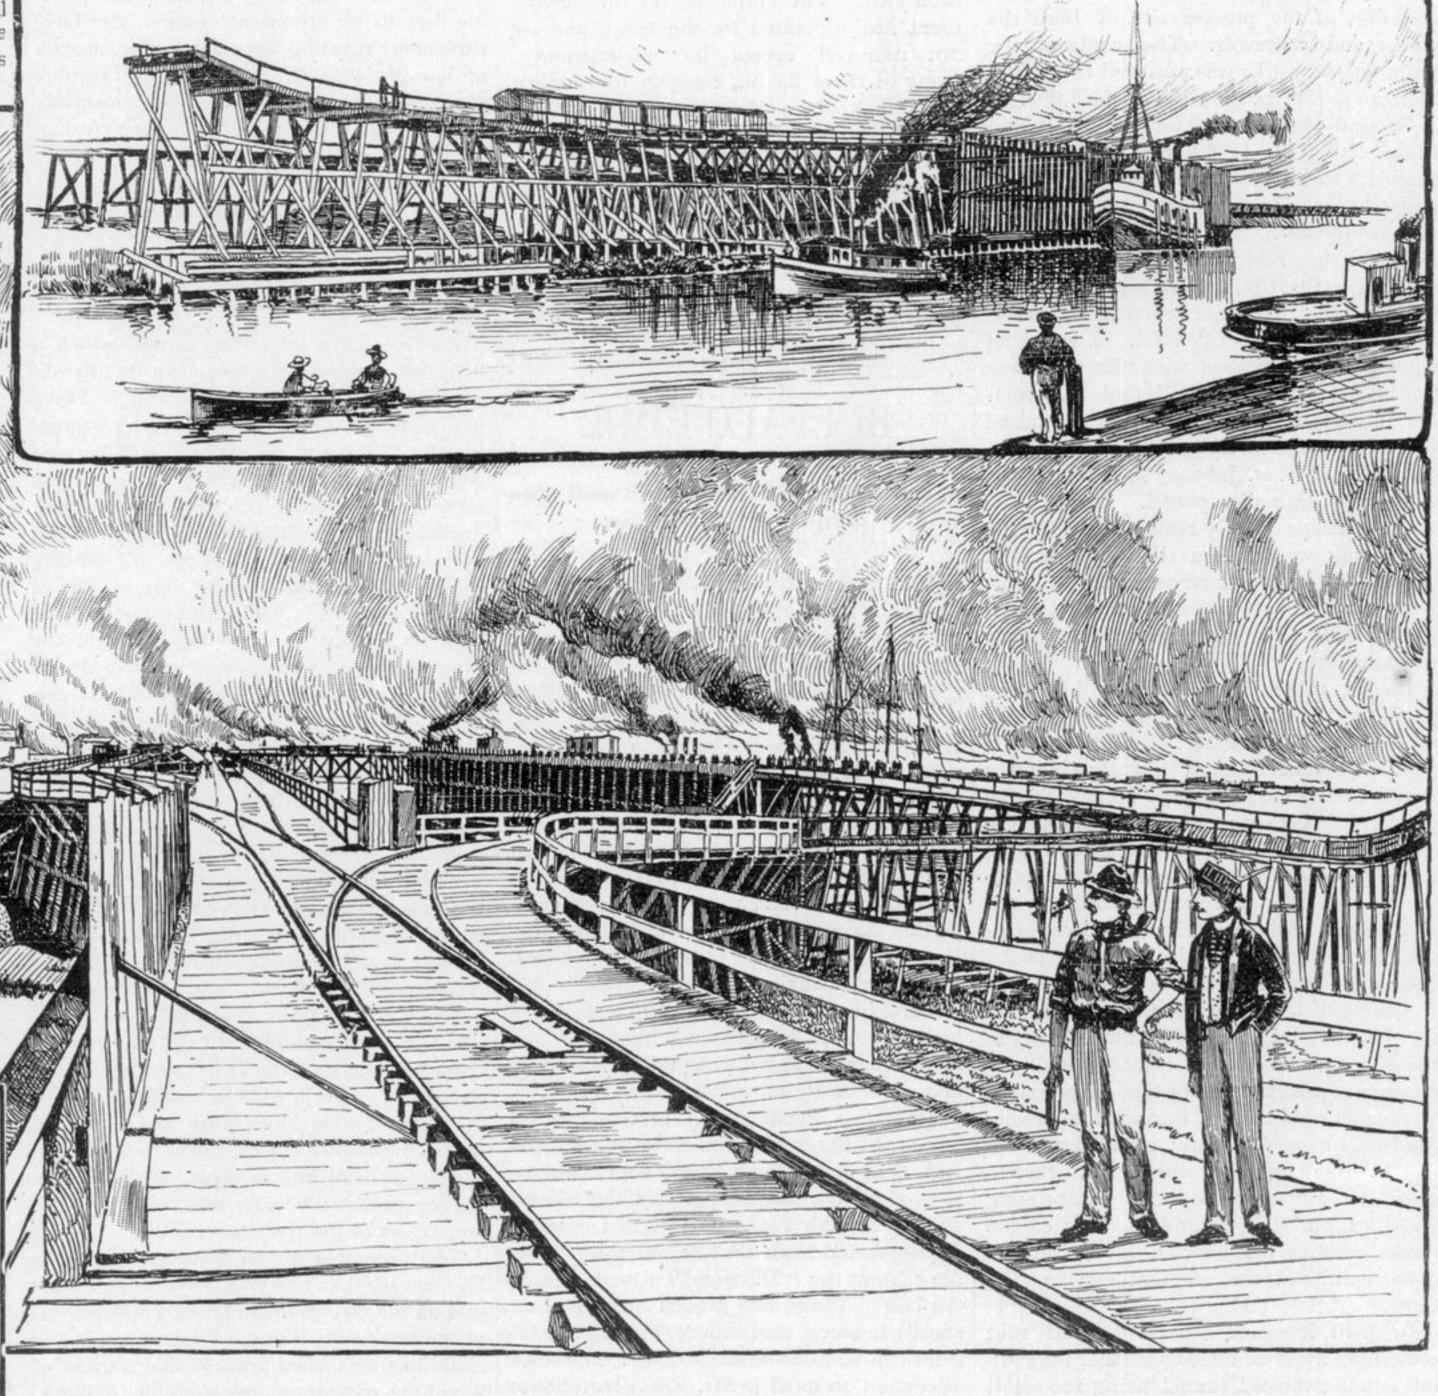

> In the year 1856 the Delaware, Lackawanna & Western Railroad was opened from Scranton to New Hampton, N. J., connecting with the New Jersey Central at that point. The Lackawanna was originally a six-foot gauge, but was afterwards changed to standard. The total tonnage for the first year is given as 133,963 tons.

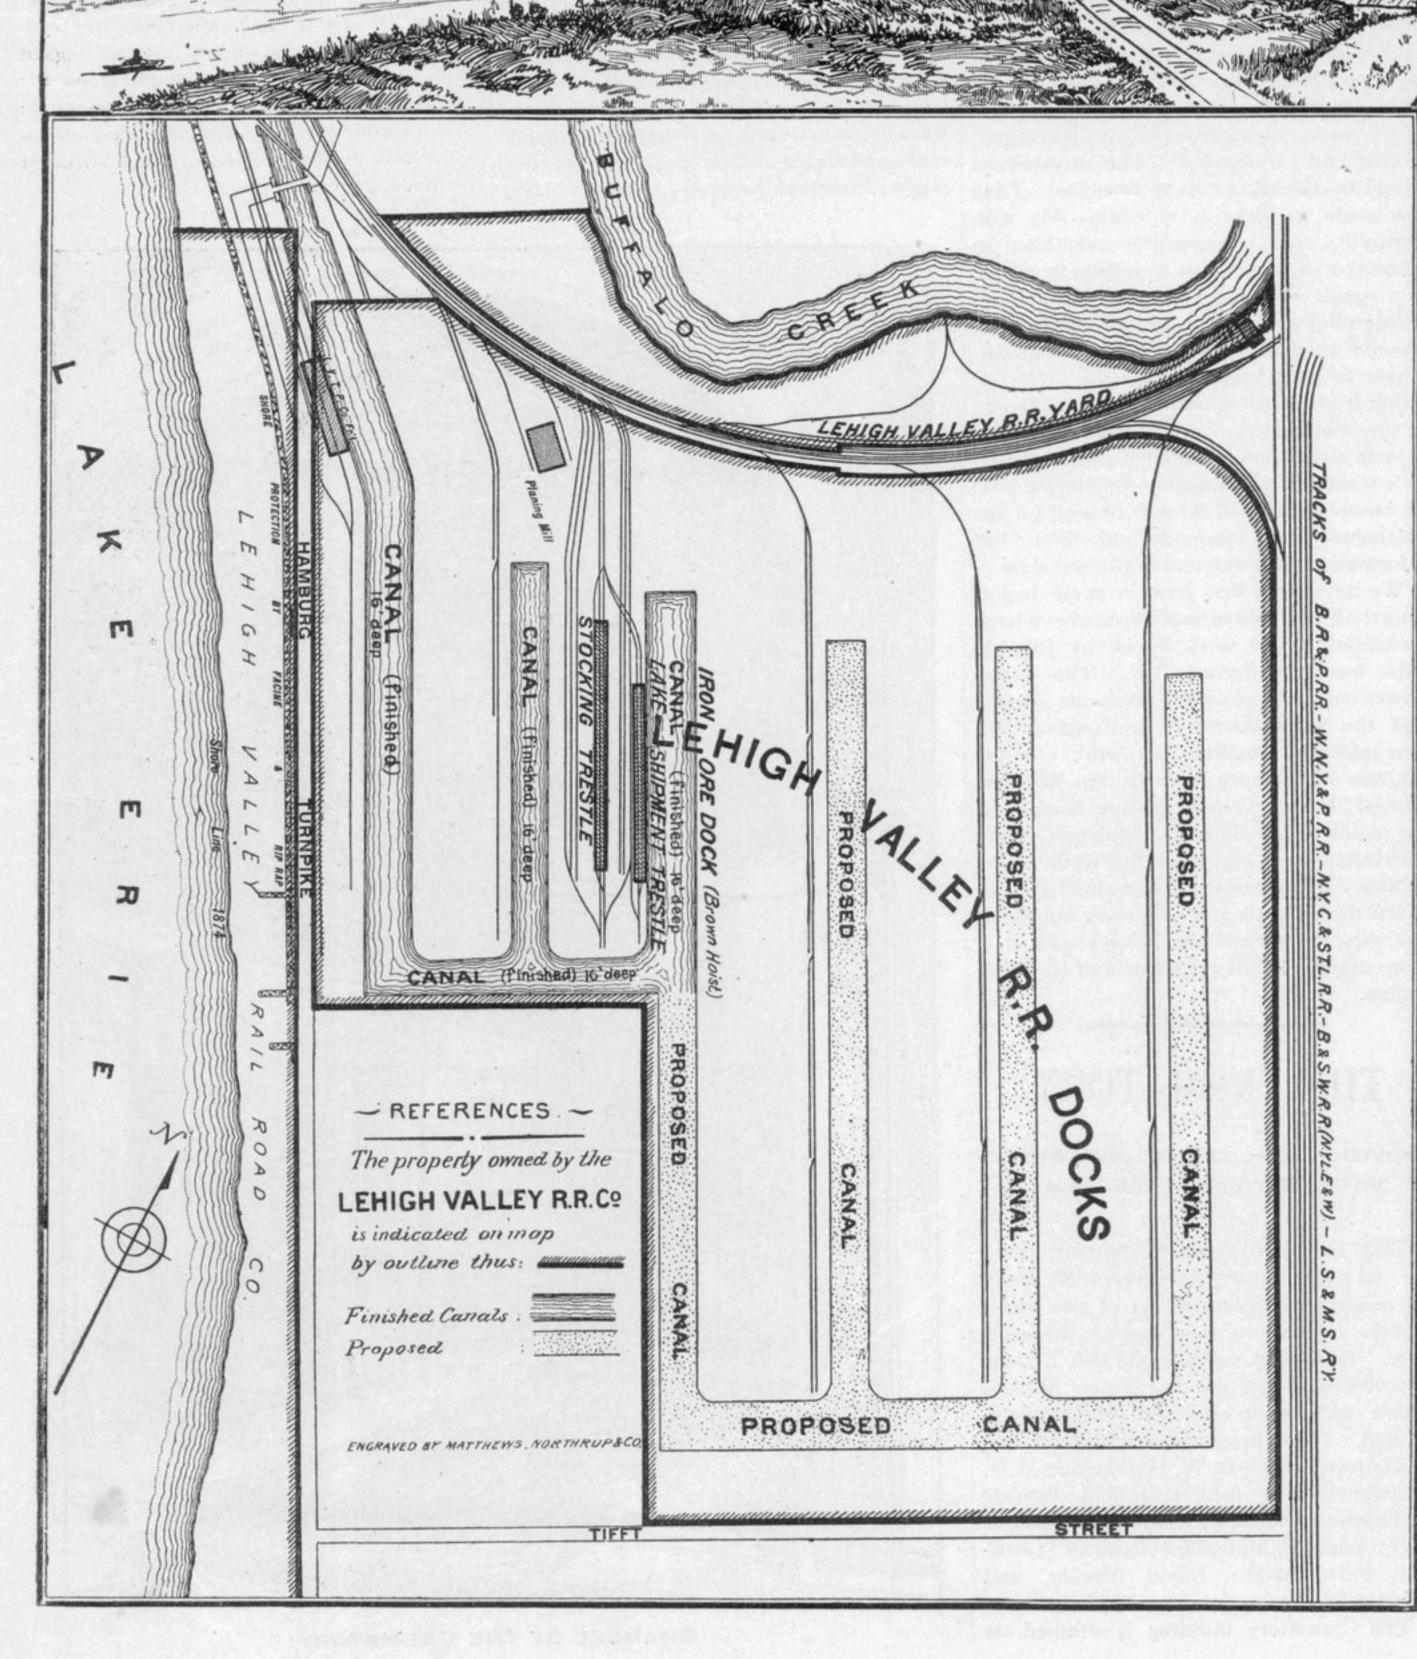

The Blossburg basin, containing a semibituminous coal, and lying to the southward of Corning, N. Y., was opened up in 1840, a railroad built from the mines to Corning, and 4,235 tons marketed that year. At Corning it was loaded into canal boats and shipped via Watkins to Geneva, thence through the Erie Canal. "Up to 1860 the use of Blossburg coal was confined, with unimportant exceptions, to blacksmithing and a few rolling-mills, wood being the fuel used for steam purposes, and that in a small way only, in the State of New-York."

Local Reminiscences.

The Erie Canal was opened October 25, 1825, and very soon after Lehigh coal was brought to Buffalo for manufacturing purposes. As early as 1827 we learn of some being shipped to Gibson, Johnson & Eel at Black Rock, boats at that time carrying from 25 to 40 tons. As the canal was improved the carrying capacity of the boats was increased from time to time, until they were able to carry about 125 tons prior to its enlargement in 1853. Wood being

abundant, the early settlers, not having a superabundance of means, could not afford to use coal when a cheaper commodity could be substituted, and it was not until about 1850 that any considerable amount of anthracite was sold in Buffalo for domestic purposes. Mr. John Wilkeson states that about 1829 a party desirous of introducing soft coal shipped a cargo of block coal from Cleveland, which was unloaded at the corner of Illinois and Ohio streets, but as the people were unaccustomed to this kind of fuel it was regarded as worthless, and nothing more was done in that direction for some years. In 1835 or 1836 a cargo of soft coal, also loaded at Cleveland and destined for Canada, was brought to this port, the vessel being driven here by stress of weather, and the cargo unloaded at what was then the Twin warehouse, near the present Bennet elevator, and sold at 16 cents per bushel.

LACKAWANNA COAL TRESTLE AT CHEEKTOWAGA

Though we have referred to the very meagre tonnage in those early days, possibly nothing can impress the fact so strongly as a few figures by way of comparison. The entire tonnage of the Anthracite Association in 1861 was less than 25,000 tons for Buffalo and the entire West, of which amount about one-half was consumed here and the other half answered to supply the vast territory beyond, it being estimated that of this 12,000 or 13,000 tons the Chiham & Hodge, was on the Evans Ship ware, Lackawanna & Western Railroad cago agent, Mr. Robert Law, required about 10,000 tons. Mr. Law states that quite a coal centre. If the old bridge on to Buffalo for the purpose of establishing a his anthracite tonnage in 1856 was about 750 tons. THE LATE GUILFORD R. WILSON The First Shipper of Anthracite Coal from Buffalo.

and in order to secure the necessary water front it was determined to improve the property along the Buffalo Creek between Hamburgh and Ohio streets. To do this they were obliged to remove the rock in order to obtain sufficient depth of water, which was done at an expense of about \$150,000. They erected a large trestle with a capacity for storing coal in pockets, which was completed about

At this time the larger proportion of the property south of Peck slip and north of the proposed South channel between the river and the ship-canal was unoccupied, as also that between the ship-canal and the lake from the lighthouse to the proposed channel. The latter, giving a water-front of some two miles, being undeveloped, had only a nominal value. The Lehigh Valley Railroad Company having allied itself with the Erie, and the property on the river previously referred to being inadequate for both the Delaware and Hudson and Lehigh Valley, the latter interested itself in the Buffalo Creek Railway Company, which had just been organized for the purpose of furnishing the several railroads centering here facilities for reaching the docks, making a junction with the New-York Central & Hudson River Railroad near William Street, and then across Buffalo Creek and between the river and the ship-canal to Peck slip, also between the ship-canal and the lake to the light-house. Some negotiations were afterwards entered into by which the Buffalo, New-York & Philadelphia R. R. Co. acquired the right of way between the lake and canal north of lot 57. This property has since become very valuable, and is now the centre of the coal and lumber trades, all the coal being handled there with the exception of that shipped by the Delaware & Hudson, the D. L. & W., and J. Langdon & Co.

Judge Packer of Mauch Chunk was President of the Lehigh Valley Railroad, and it will be noticed how closely he has been identified with this city's interest. He was a contractor in the construction of the Lehigh slack-water navigation, which he afterwards paralleled in building the Lehigh Valley Railroad. Early in 1870 an expensive trestle was erected upon the property known as the Lehigh Docks, opposite the Erie Railroad, which was the first trestle of any magnitude completed. It had 58 pockets, with a storage capacity of 4,500 tons. This trestle has since been torn down.

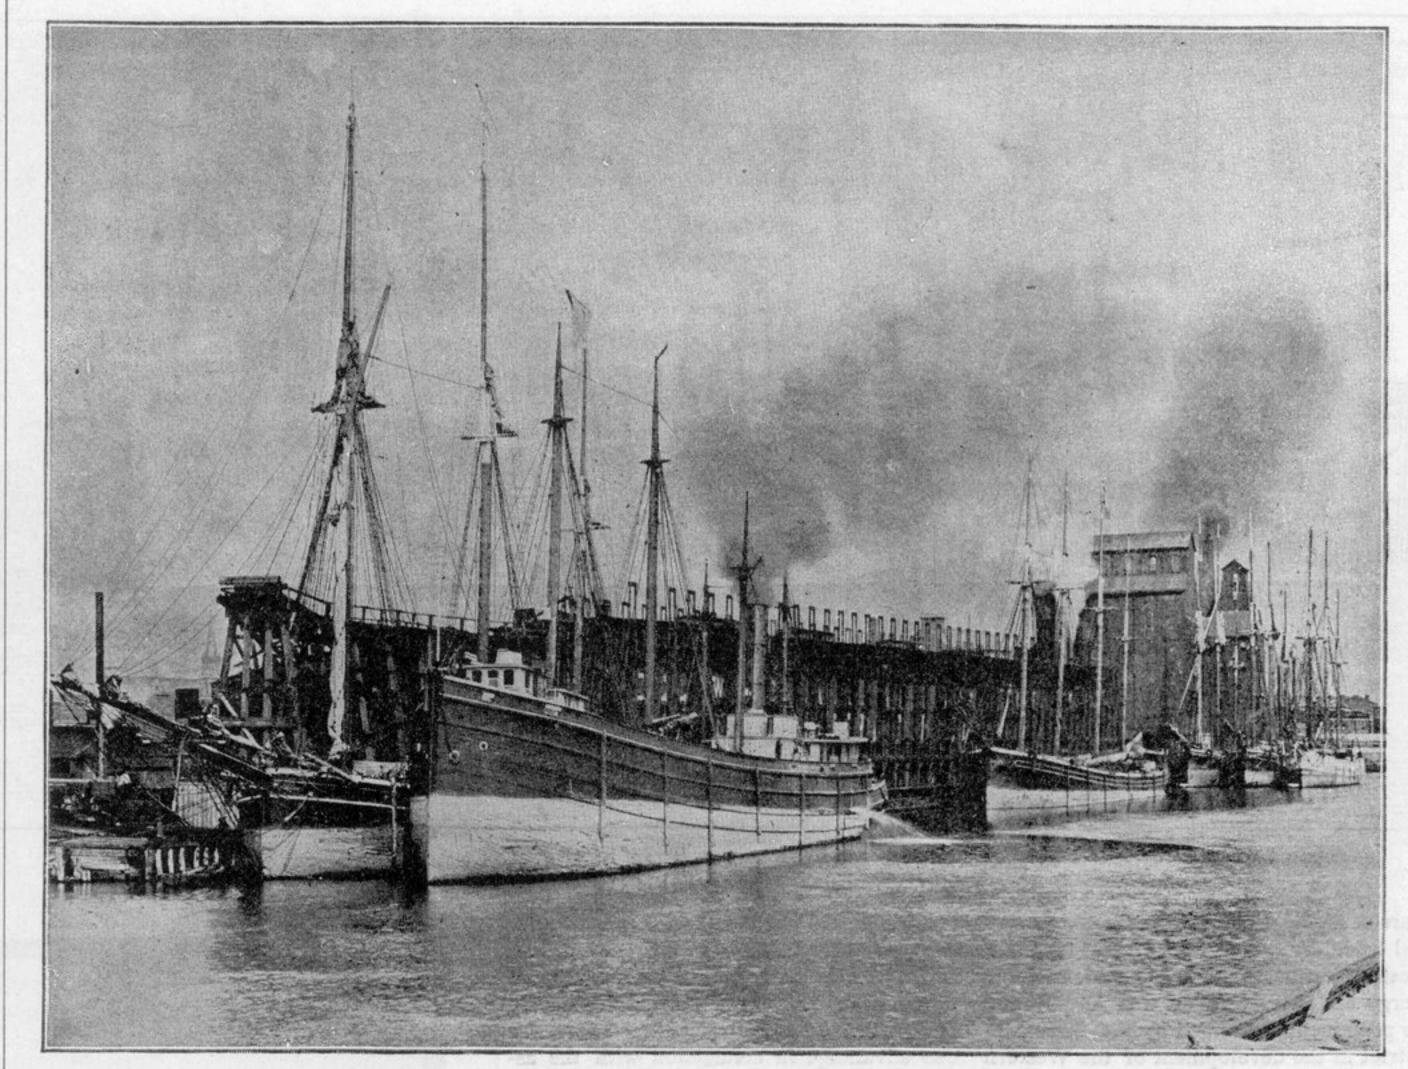

About the same year J. Langdon & Co. completed a trestle on the Erie Basin in connection with the New-York Central & Hudson River Railroad. A little later C. A. Blake, a shipper over the Lehigh Valley R. R., built a trestle on the ship-canal north of the Lehigh Docks, now occupied by the Pennsylvania Coal Company, which opened a branch office in 1876. This company was the first to erect a coal elevator, by means of which coal was elevated direct from dock into vessel.

At a later date the Erie Railway erected on the westerly side of the ship-canal south of the proposed South channel - the canal having been extended—a trestle which was intended to accommodate these several

shippers over their line. As early as 1870 the Pennsylvania Railroad Company became carriers of large amounts of anthracite coal to Lake Erie ports, first via Philadelphia & Erie to Erie, Pa., and later to Buffalo in connection with the Buffalo, New-York & Philadelphia via Emporium. The latter company had made no extended preparation for this branch of the business until the spring of 1882, when they provided additional facilities, erecting a large and commodious trestle especially adapted to the handling of anthracite coal.

LACKAWANNA DOCKS, FOOT OF ERIE STREET.

the old Lehigh dock property, a new and improved one has been erected on the City Ship Canal; this, however, has proved to be inadequate, and extensive stocking and transfer facilities have been provided by the Lehigh Valley Railroad Company upon what is known as the Tifft Farm, a tract of some 320 acres, which was secured by them in 1880, and upon which about \$2,000,000 has been expended in digging canals, building docks, laying railroad tracks, etc., thereby adding several thousand feet of dock

About the same time the long-talked-of project of building the Jersey Shore, Pine Creek & Buffalo Railroad was revived, and its construction actually entered upon in the interest of the Philadelphia & Reading Railroad, connecting with the Corning, Cowanesque & Antrim

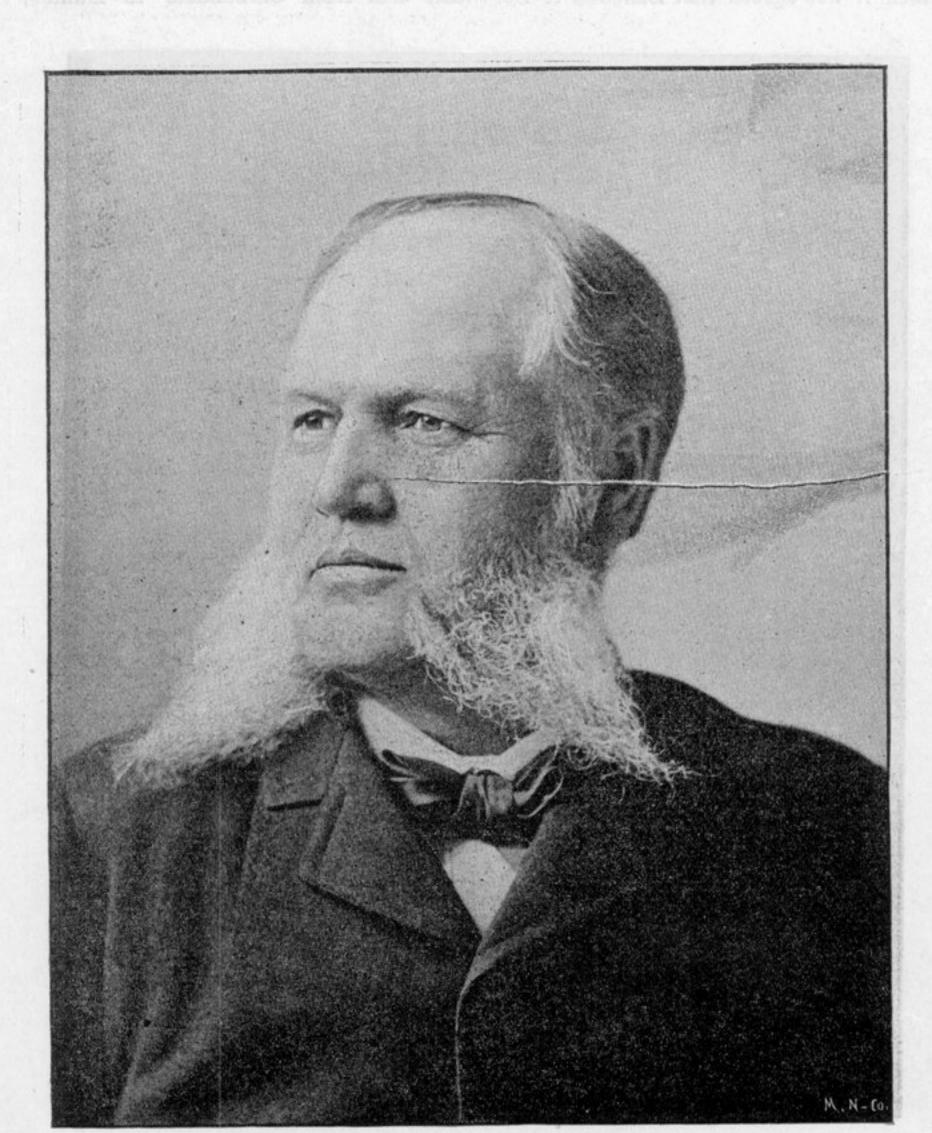

- also the Syracuse, Geneva & Corning, and at Lyons with the New-York Central, making a continuous line from the mines to Buffalo. The Reading has up to the present time handled its coal over the Buffalo Creek Railroad in connection with interests previously established, but it is generally understood that such facilities are no longer adequate, and that a measure is on foot looking to extensive improvements for the handling of that company's coal. Prior to the completion of the Jersey Shore, Pine Creek & Buffalo Railroad, in 1883, the Reading shipped a large amount of coal via New-York and the Erie Canal.

We have thus tried, as briefly as possible, to show the several stages through which the Anthracite trade has passed from 1842 to the present date. Taking it by decades

sional men also.

While practicing law at Hornellsville from the Pittsburgh and Ohio coal fields to With these facts before us, are we not several years ago with his brother, the presnellsville Farmers' Club, and to enter his team of horses for a premium at the Club's forthcoming Fair. He declined at first, but his pride in his horses, and the desire for diversion, induced him to join. He attended a meeting of the club, called to make preparations for the fair, and was soon greatly interested. He was chosen secretary of the club, and each year, through his efforts as manager, the Fairs became more prosperous, and the present successful Hornellsville Exposition was finally the result. Mr. Robinson refused pay for his services until the last year, when the profits from the Exposition exceeded the amount of capital stock; then he consented to accept a salary. Such flattering success as manager naturally created an ambition for a broader field of work, and knowing Buffalo and its superior advantages for a great Industrial Exposition, he prepared to make a fuller

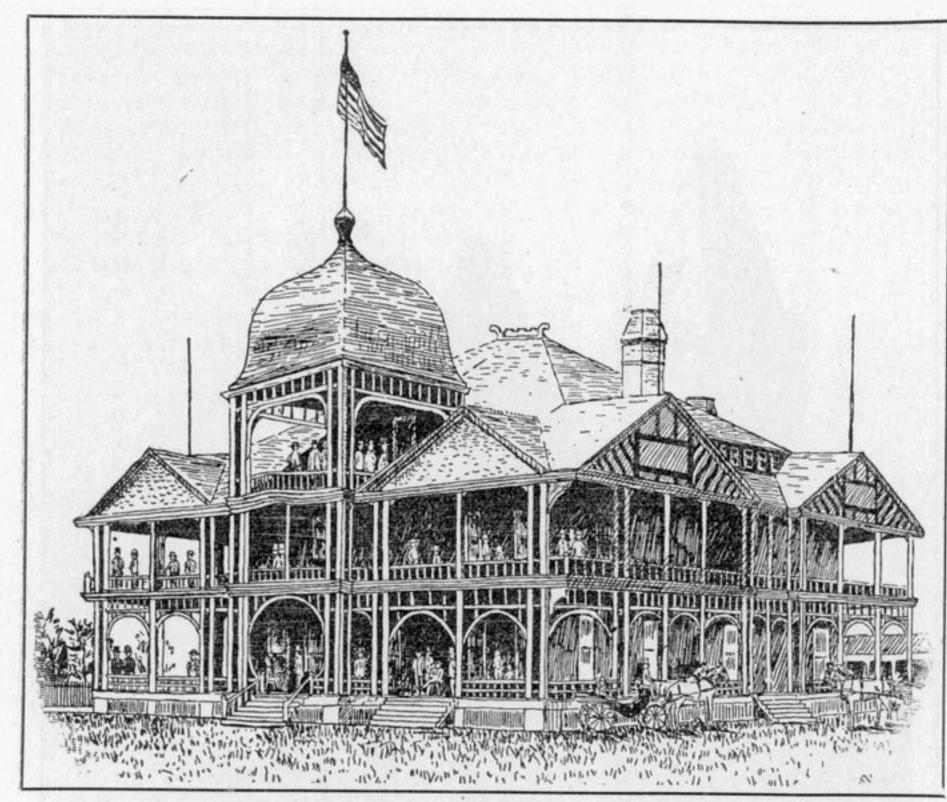

Meanwhile Mr. Hamlin had exhibited 66,000 marks a new and brighter era of prosperity his famous horses at the Hornellsville Ex-Robinson and his work, but it was a series of felicitous circumstances which brought the men and their plans together.

The Erie Canal, the ity, but it did not do so. The Buffalo In- its railroads, I found myself on the prairie, with here and there a little station rising up out of the corn fields. Riding out of Buffalo on any road, hundreds of miles, I found thriving cities, towns, and villages, which would contribute to swell the attendance of visitors and the number and variety of exhibits to an unmeasurable extent.

"I saw that the tract of land occupied by the Buffalo Driving Park was just suited to the purposes of a great Exposition. It could be reached in little over one-half the time required to go from the business center of St. Louis to the Fair Grounds of that city. The street railroad facilities were better for reaching the grounds here, and we had a line of steam railroad also - an advantage which St. Louis had not. The pavement of our streets to the grounds is of asphalt. At St. Louis the streets have rough stone pavements, and a carriage drive to the grounds here would be a pleasure, while there it was a torture. I saw 153,000 single admission tickets sold at St. Louis in one day, and the attendance included thousands of others who had season tickets. My conclusion from this was that the Buffalo Driving Park Grounds, used for an Exposition properly managed, would not hold the people who would be drawn there.

"Two years ago I set about to interest other business-men in such an enterprise, and a moderate amount of stock was subscribed, but each subscriber asked, 'Who is going to manage this fair? Where is the man who has the ability, and who can devote all of his time to it?' We found no one for that position, though we had interviews and held correspondence with men all over the country. The result was that the project went to sleep, and in time would have been dead.

"Last winter we heard that Mr. C. W. Robinson had been corresponding with the Business-men's Association, and offering tocome here and tell them what he knew

EXECUTIVE BUILDING - FAIR ASSOCIATION.

about Industrial Expositions as a benefit to a city. He held considerable correspondence with the Association, but it looked as though nothing was going to come of it. We sent for Mr. Robinson. We had been very favorably impressed with his ability, and after his visit, and after he had talked with the leading business-men of the city, we secured him to take full charge of the enterprise. He has shown a wonderful amount of executive ability, sound judgment, and pluck, and is pre-eminently the right man in the right place. He also showed his faith in the success of the Exposition, by taking \$6,000 worth of stock.

"The company which was at this time incorporated is, in my opinion, composed of the soundest and best business-men in Buffalo. It hopes to confer upon Buffalo the greatest benefits it ever received from any corporation, and without one cent of cost to Buffalo as a city.

"The Driving Park lands were sold to the Fair Association and paid for in their six per cent. 5-20 bonds. The Buffalo International Fair has come to stay."

Mr. Hamlin's story is an interesting one, and the foresight shown in it is characteristic of the man in all his dealings.

The daily papers have told how the organization of the Fair Association was perfected on March 25th last, at the law office of Messrs. Rogers, Locke & Milburn. The following officers were then elected:

President — C. J. Hamlin. Vice-President- F. C. Stevens of Attica. Secretary and General Manager - C. W. Robinson.

Treasurer - William H. Almy.

Directors - Philip Becker, Charles F Dunbar, C. W. Miller, Gerhard Lang, S. S. Spaulding, A. P. Wright, Harry Hamlin, Clarence O. Howard, and William Hamlin.

The men who joined with the projectors in the enterprise were: the Hon. E. G. Spaulding, Pascal P. Pratt, Daniel O'Day, the Hon. Sherman S. Rogers, Charles A. Sweet, A. P. Wright, Miller, Greiner & Co., Barnes, Hengerer & Co., Wm. H. Glenny, Sons & Co., Adam, Meldrum & Anderson, R. L. Howard, J. N. Adam & Co., C. J. Hamlin, D. E. Morgan & Son, S. O. "The en's Union. business-men of the city," said the gentlemanly secretary, Mr. Squire, "are behind us, and ready to come forward for any necessary expenditure."

The Association takes for its motto the following dictum from the writings of Rev. Dr. Griffith: "The Bible reveals to us a number of rewards that God bestows, and, if one is higher than another, the highest reward of Jehovah, the highest glory of Heaven, I believe, will be for that man who is instrumental in saving a human soul."

The Association offers to all young men, free of charge, three commodious, cheerful, well-lighted reading-rooms, supplied with the leading daily and weekly newspapers, secular and religious, together with all the first-class magazines of the day. It has also two free reference libraries, containing over 6,000 volumes. It also conducts an Employment Department and keeps a boarding-house register, for the information and convenience of members. In sickness, the Association furnishes watchers and attendants.

In an educational way the Association has every now and then "Popular Talks by various entertaining speakers, on such subjects as health, law, science, travel, etc. It also possesses two lyceums for the purpose of debate and literary and forensic improvement; and a large and commodious Gymnasium for physical culture. There are also upon the premises comfortable baths, hot, cold, and shower. In addition various lectures, concerts, and other entertainments are furnished by the best available talent.

The Academy possesses, in addition to its support the Association. Charity Organization Society.

This society, which has come to be regarded as a necessary factor in the administration of the charities of Buffalo, was founded in 1877. It is modeled after the Charity Organization Society of London, England, and was the first of some sixty societies of the same nature to be established in this country. Unlike other societies which include the word charity in their titles it does not disburse relief; but its object is to organize the existing charities of the city; and to introduce into the giving of alms, or relief of any kind, scientific business methods, which will make relief-giving helpful instead of pauperizing in its results.

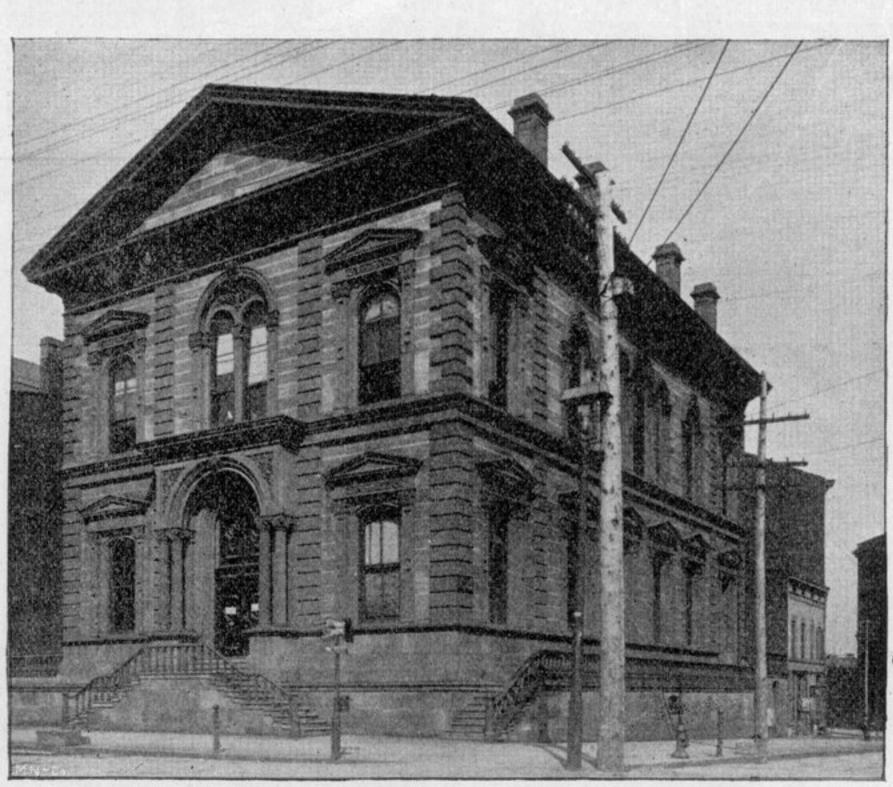

Since its foundation the society has dealt with more than 6,000 families, and by the use of wise methods has made many of them self-supporting. It has also been Dr. E. H. Norton, attending surgeon; Dr. largely instrumental in reducing the city J. H. Pryor, attending physician; Dr. expenditures for out-door relief, which amounted to \$100,000 in 1877, but were only \$45,000 in 1887.

The society seeks to help the poor by socalled provident schemes, of which it now carries on the following:

1. A Labor Bureau for the employment of washer-women; 2. A Créche, or day nursery, for caring for little children while their mothers are

3. A Provident Dispensary for the medical and surgical treatment of the worthy

4. An Accident Hospital; 5. A Wood-yard, where employment is

BUFFALO SAVINGS BANK AND GROSVENOR LIBRARY.

who are without work or means;

6. Evening Classes in mechanical drawing, at a nominal cost to the student. In addition, the society will establish in quintupled. In the new building will be the near future a penny savings-bank, a room for various classes, and ample facilfree reading-room, a provident coffee and ities for the literary exercises and other soup room, a training-school in domestic modes of improvement which the associawork, a home for aged couples, and free tion furnishes. It will be a handsome

lecture-courses for working people. City, who will ever be remembered as one of Buffalo's benefactors, deeded to the society a large amount of property. With the proceeds of some of this the society erected at the corner of Michigan and Swan streets a handsome fire-proof building, which is called the Fitch Institute, and | tempts for the reformation of those who which affords a home for its various chari- inflict misery upon the innocent. Women's Christian Association.

Roswell Park, consulting surgeon, and Dr.

Jones, house surgeon.

The object of this association is to promote the spiritual, moral, mental, and physical welfare of women; to clothe the destitute children who have not sufficient means to make themselves fit to appear in Sunday or day school; also to aid any adults who are too poor to provide themselves with suitable clothing; -in short, to help the poor in this city to help themselves. This work is divided into three branches; first, the poor in families in their own homes; second, girls, strangers in the city seeking a livelihood; and, third, children in industrial schools. Its officers are: President, Mrs. E. Haines; corresponding secretary, Mrs. Geo. Wadsworth; recording secretary, Miss Mary E. Chichester; treasurer, Mrs. H. S. Cunningham; matron of home, Mrs. James Carson; missionary, Mrs. A. McPherson.

As an example of the practical good done by this association, it may be mentioned that last year it gave away 1,144 garments, 252 pairs of stockings, 112 pairs of shoes, 25 pairs of rubbers, 19 sheets, 17 blankets and comfortables, 5 bedsteads, 104 yards of new material, and many baskets of provisions and other necessaries of life. Besides these gifts, the association paid out in cash for furniture, rent, food, and funeral expenses \$412.11. Families have been placed under gospel influences, and children led to Sunday schools. This good work is constantly gaining the confidence of the

The association (at present located at the corner of Eagle and Ellicott streets) contemplates moving in October to a much more commodious home, now building at the corner of Court Street and Niagara Square. In this new building ampler accommodations of all kinds will be furnished. It will house four times as many as can be cared for in the present quarters, and will be in every way more commodious and

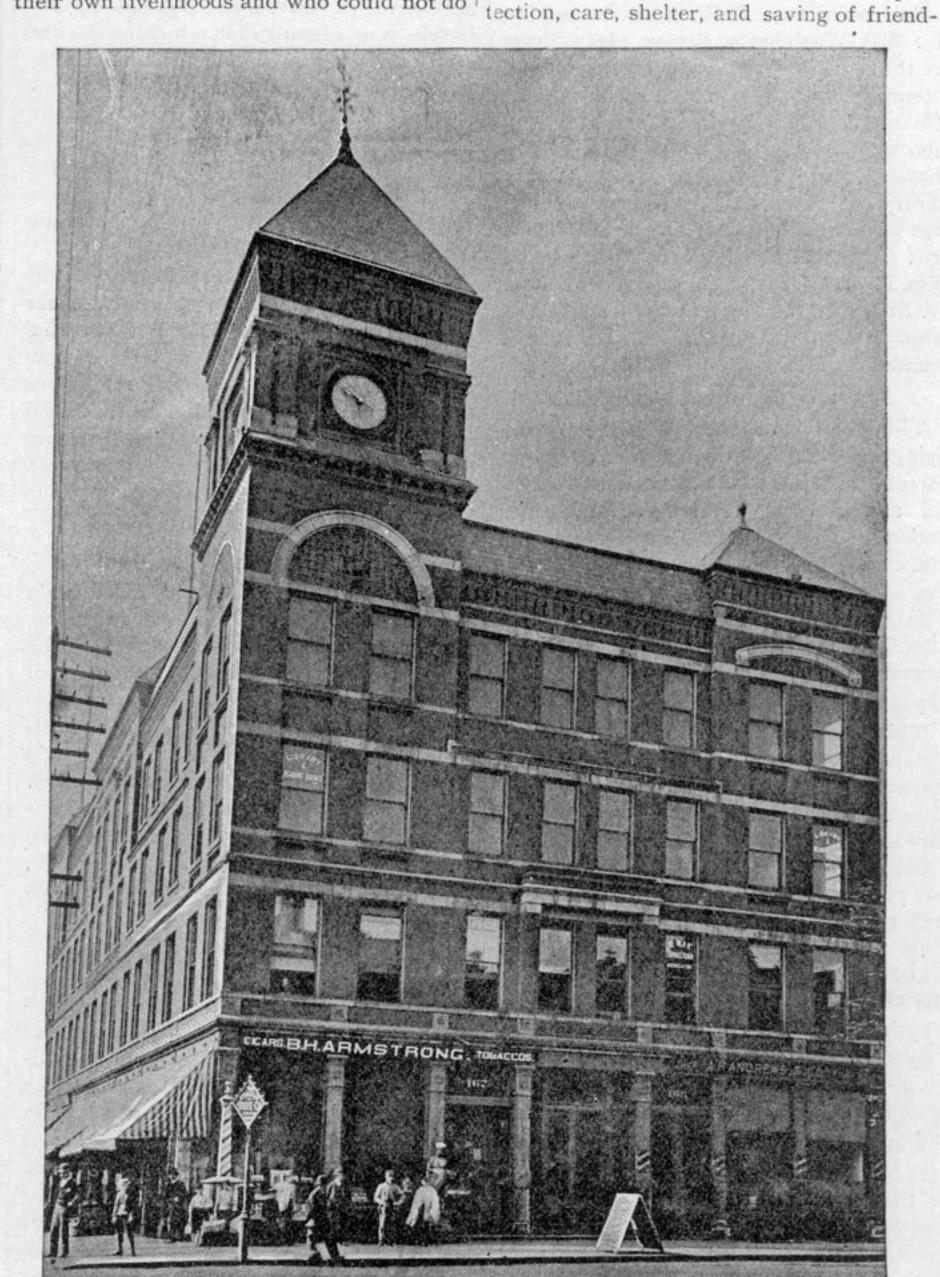

given during the winter to men with families When it is established in its new quarters, it is calculated by the matron that the association's power for good will be at least edifice of stone and brick, costing some In 1880 Benjamin Fitch of New-York \$60,000, and both an ornament and an honor to Buffalo.

Queen City Society for the Prevention of Cruelty to Children.

This society has for its object the protection of helpless childhood from cruelty and suffering; and kind and earnest atproofs that it deserves the hearty support Mr. T. Guilford Smith is the President of the community. Last year it rescued placing them in new ones. The society is in great need of a permanent Home, and it is to be hoped will soon have it.

The society is now located at 29 Franklin Street. Its officers are: O. P. Letchworth, President; Hon. S. Cary Adams, treasurer; H. S. Cunningham, recording secretary; superintendent, A. P. Ripley, Jr.

Buffalo Children's Aid Society. This society has for its object the pro-

it was an offshoot of the Young Men's

the work, the acquisition of money not en- history. The library of the society contains over In other words, these organizations are 9,000 bound volumes. Each year brings rare and valuable additions to the collection. The oldest book in the library was published in London in 1599. It also possesses over 7,000 unbound pamphlets, which later on will receive bindings. The manuscript collection is very valuable. The society has upwards of 180 single volumes of manuscripts, not including autograph letters and correspondence. The oldest Ms. volume in the collection was beautifully written in

antique German in 1576. The Historical Society also has a portrait gallery, the portraits being chiefly oil-paint ings. Of these there are 61. Included among them are a number of portraits of early Buffalonians. Viewed locally, these counterfeit presentments of the pioneers are very precious.

There is also a collection of maps, charts, and atlases, numbering upwards of 700.

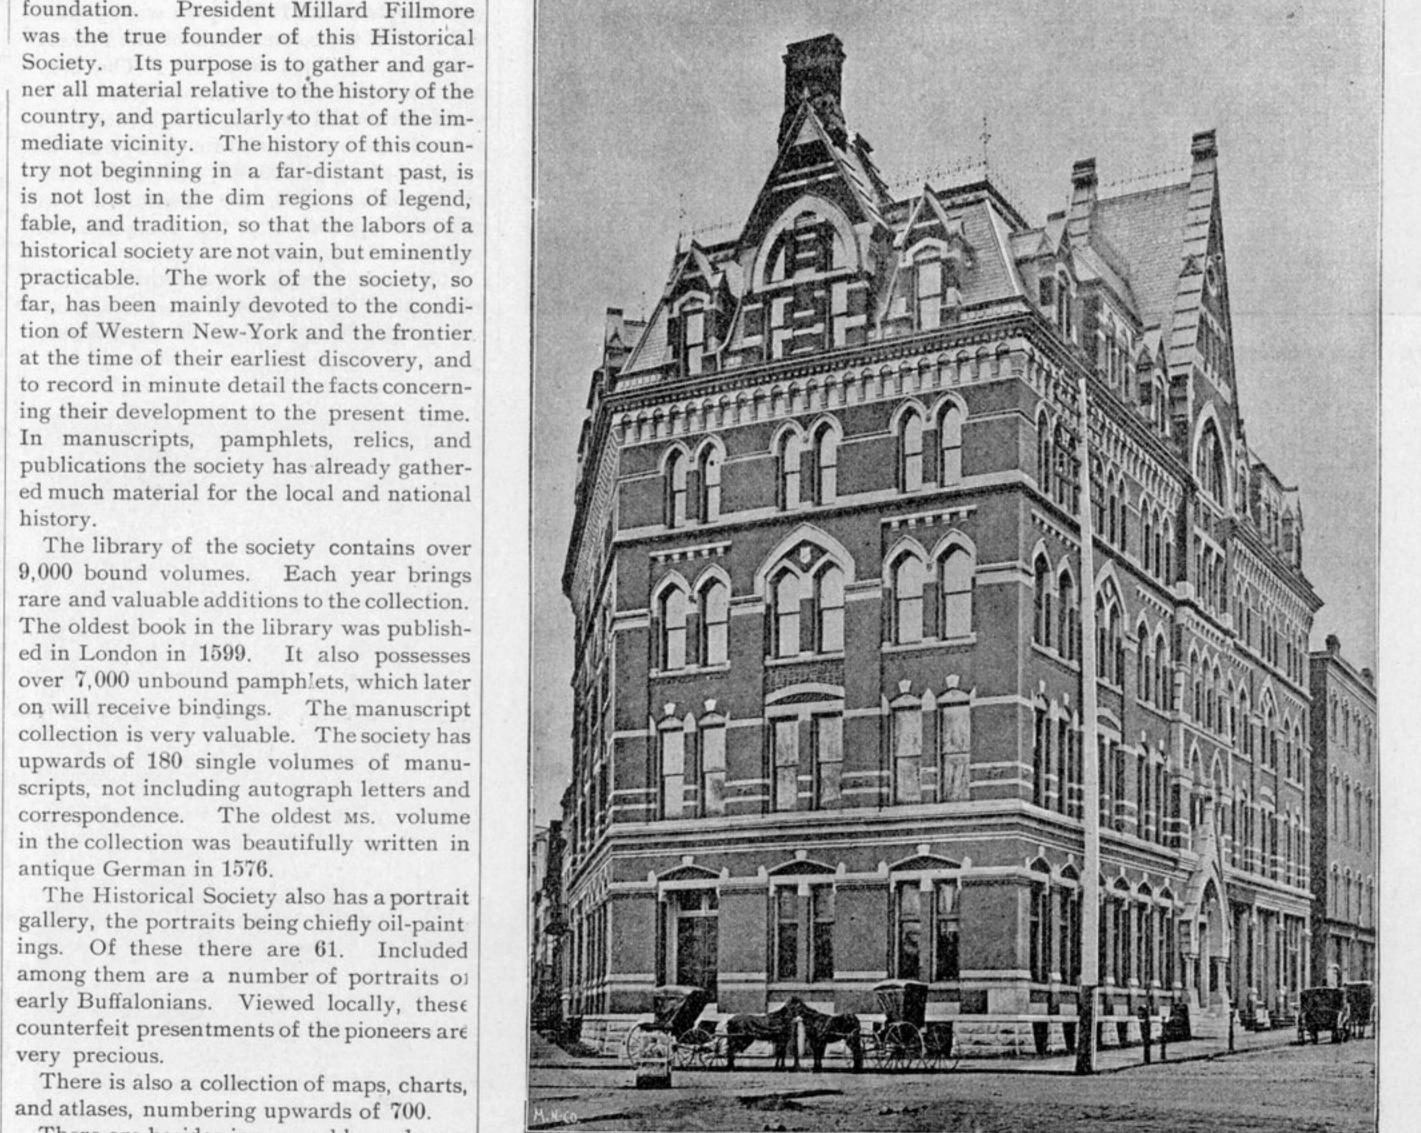

There are besides innumerable and various relics of the past, and curiosities, including battle-flags, mementoes and trophies of the Revolution, of the War of 1812, the Mexican War, the Patriot War, Rooms are a place in which Mr. Oldbuck would have pre-eminently enjoyed him-

There are likewise here collected large numbers of photographs, autographs, busts, pictures, and antique newspapers. He who loves the past, and wishes to renew his acquaintance therewith, should visit the rooms of the Buffalo Historical Society, which are open daily.

Its present officers are: President, James Tillinghast; Vice-president, Wm. K. Allen; recording secretary, Martin Clark; corresponding secretary, librarian, and treasurer, George G. Barnum.

Fine Arts Academy.

This delightful but unappreciated institution was organized in 1862. After varlabors performed by these two gentlemen in ious vicissitudes of location, it finally found its present home in the Library Building Branch on Exchange Street; and also a It is a noble center of culture for a great in February, 1887. be or could be.

THE CHURCH HOME.

less and vagrant children, furnishing them with food, raiment, and lodging, aiding them, and supplying their wants; providing them with suitable occupation, also instructing them in moral and religious truths, and in the rudiments of education.

The officers are: President, S. S. Guthrie; Vice-president, F. L. Danforth; secretary, Millard S. Burns; treasurer, D. E. Brown; matron, Mrs. W. H. Coke; attending-physician, Dr. F. R. Campbell. The society occupies rooms at 29 Franklin Street.

Charity Foundation of the Protestant Episcopal Church.

The Foundation maintains in the building No. 24 Rhode Island Street a home for relief, shelter, support, education, and protection of indigent, sick, or infirm persons, including orphan, half-orphan, and destitute children. Total number of beneficiaries last year, 98; daily average, 70. Its Board of Managers are: Rev. L. B. Van Dyck, Rev. F. Lobdell, Rev. W. A Hitchcock, James E. Ford, Esq., and others. Its President is Thomas Lothrop, M. D.; Vice-president, Rev. L. B. Van Dyck; secretary, W. H. D. Barr; treasurer, Edward S. Dann; resident chaplain, Rev. O. R. Howard, D.D.; physician, Charles G. Stockton, M. D.

The Deaconesses in charge are Sister Louise and Sister Mary; teachers, Sister Louise, Principal; Annie U. Scoville and Catherine M. Earl, assistants.

This is a model institution of its sort. The Home is most pleasantly situated, commanding a very fine view of the Niagara River, forts, and opposite shore. Such a view in itself must be a wholesome and recuperative influence to such as are sick or infirm. Then there is a very large and well-cultivated kitchen garden at the back, which furnishes the Home with a constant supply of vegetables and fruit in

The building internally is divided into three departments, (1) for old ladies, (2) for children, and (3) the nursery department. There are at present 60 children in the Home every one of whom appears to be comfortable and contented. The nursery is a pleasure to look into, so full is it of happy faces, - children who not only look well, but are well; well fed, well bred, well clothed, well housed, and well cared for. The children's three dormitories also are exceedingly neat and clean, and fanned by the health-giving fresh breezes from the adjacent river the children can scarce help but sleep sound and well. A look into the childrens' dining-rooms as the inmates were about to sit down to dinner showed that the tables were well supplied with wholesome and substantial food, and everything eatable had an appetizing and sanative appearance. The old ladies department and the nursery have each a dining-room of its

The Home has been in its present location about 20 years. Miss Newman speaks of the Home as greatly needing more room;

which it is hoped it may soon acquire. The children's school-rooms and playrooms are appropriately equipped and furnished; the boys' dormitory is kept in most excellent order by the boys themselves, who are taught to be useful. One little boy was seen sewing buttons on his companions' shoes, and seemed quite pleased at being so employed.

Take it for all in all, this Home is a delightful place for those within its walls, for they are made as comfortable and happy

Cuard of Honor Library and Christian Institute.

This occupies a building of its own at No. 620 Washington Street. Its objects those who avail themselves of its privileges; also to furnish lodgings to worthy young men from October 1st to May 1st free of charge; also to maintain a free public library. During 1887, 1,295 nights' lodgings were furnished to 185 men. Its officers are: President, Louis F. Iulg; treasurer, Wm. H. Cuddeback; superintendent, Wm. W. Stewart. It does, in a quiet way, a large amount of useful work. It was founded by Miss Charlotte Mulligan.

Buffalo General Hospital.

This is a handsome brick building, occupying spacious grounds at No. 100 High Street. Its object is to furnish aid, medical and surgical, to indigent and other patients. In 1887 this Hospital received and cared for 1,230 patients, and the daily average number in its charge was about 80. The hospital has an ample corps of able in many ways a model institution.

Hospital of the Sisters of Charity.

This is located on suitable and extensive grounds, on Main Street between Delavan Avenue and Florida Street. Its objects are the care and treatment of the sick and in- The total number of inmates last year was jured. In 1887 it received and cared for 148; the daily average was 45. and Dr. Ring.

The object of this institution should enlist in its favor the sympathy of all who are

THE PROVIDENCE LUNATIC ASYLUM.

Beside these principal hospitals, there are several smaller ones, together with dispensaries, all well organized, and all useful in their several spheres; but it is not needful to particularize concerning them.

Homœopathic Hospital. This is situated at No. 74 College Street. Its object is the maintenance of a homeopathic medical, surgical, and lying-in hospital. The total number of patients received last year was 300.

Society for Prevention of Cruelty to Animals. The office of the society is at 240 Main

Street. Its officers are: President, Col. E. Rockwood; treasurer, Charles M. as the conditions of mortality render possi- Utley; corresponding secretary, Mrs. Lily Lord Tifft; recording secretary, Miss Margaret F. Rochester; agent, H. M. Wright. This society, like that of the same name in New-York City, made famous by Mr. Bergh, is an organization which merits the are the moral and intellectual instruction of sympathy of every humane person. Indissolubly connected with this society are the names of Mrs. Dr. Lord and Mrs. Lily Lord Tifft. Since its organization these ladies have been untiring in their labors for the cause, and for the great good they have done they are entitled to the gratitude and the respect of every Buffalonian.

In proof of the practical work of this noble society, the following statistics for last year may be cited. During that period there were eleven arrests and six convictions for cruelty; there were 148 complaints made to the society, and all were investigated; there were 373 preventions; 56 animals were killed (to put them out of misery); 86 were sent to the boneyard; and \$75 in fines were imposed.

Home for the Friendless.

The home is situated at 1,500 Main Street. Its object is to provide a home, attending physicians and surgeons, and is temporary or permanent, for women who are friendless and unable to take care of themselves. Transient dwellers are accepted on recommendation of any one interested in the home - permanent inmates, only on examination and payment of \$250. dent of the home is Mrs. F. H. Root; secretary, Miss G. E. Bird. This has been

Buffalo Catholic Institute. This is organized for the establishment and maintenance of a library and readingroom, literary and scientific lectures, and tellectual improvement. It occupies the building on the north-east corner of Main and Chippewa streets. Its President is Charles Lautz, Esq.; treasurer, Peter

Newsboys' and Bootblacks' Home. Such an organization was unknown a few years ago. Here, at No. 29 Franklin Street, the hard-working bootblacks and newsboys find a comfortable and congenial home; here they may rest their bodies and cultivate their minds after the labors of the day; and here they find good food, clean beds, and a wholesome physical and moral atmos-

Asylum of Our Lady of Refuge. This occupies a stone building at 485 Best Street. Its object is to reform wayward girls. Inmates can be sent by parents

or guardians. Some, also, enter voluntarily, and some are committed by magistrates. There were in 1887 over 200 inmates. The institution is in charge of the Sisters of the asylum, and is one well deserving the support of the good people of Buffalo. Ingleside Home for the Erring.

This is located at 1652 Michigan Street, Its object is to provide a pleasant home, where the erring may be led back to the right path, and become useful members of society. Had Tom Hood known of such an institution, he need not have written:

"O, it was pitiful, In a whole cityful, Friends she had none."

For these and kindred asylums furnish friends to those who are friendless, and perform a work upon which we may imagine the angels looking down with sympathy and approbation. Inmates are committed to this reformatory by the police justice and are sent also by the superintendent of the poor. It received over 100

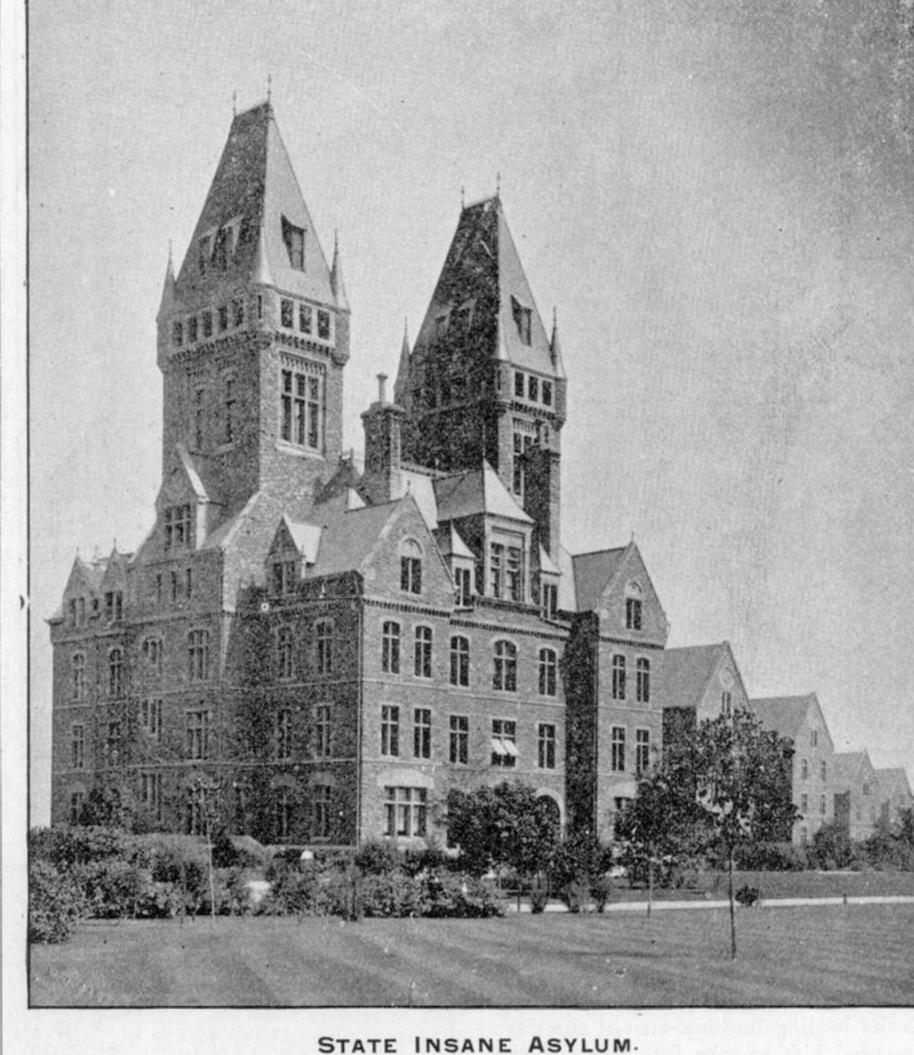

The above list by no means comprises all the public-spirited and eleemosynary organizations of Buffalo. Many others exist, each of which within its own lines performs useful offices for the general good. But in this sublunary sphere, not only time but space, are limited; and, therefore, we have pointed out merely the most notable monuments of this class.

INSANE ASYLUM.

The Most Important State Institution Located in Buffalo.

IN 1869, Gov. Hoffman, pursuant to an Act of the Legislature of that year, appointed Dr. John P. Gray of Utica, Dr. James P. White of Buffalo, Dr. Milan Baker of Warsaw, Dr. Thomas D. Strong of Westfield, and Dr. William B. Gould of Lockport a commission to choose a site within the eighth judicial district for a new Insane Asylum. Buffalo's offer of a site of 203 acres of rolling land adjoining the Park and a perpetual free water supply was accepted. In 1870 a plan was adopted and in 1872 the corner-stone of the present extensive buildings was laid. The construction was continued till the Fall of 1880, when the central building and the wards on one side were completed for occupancy, at a cost of about \$1,500,000, and on the 15th of November, 1880, the institution was officially opened for the reception of patients of both sexes. The plans provide for a central or ad-

ministration building of four stories, located about 400 feet north of the avenue.

A NECESSITY.

The first story contains offices for adminis-

trative purposes, the second is the residence

communication between the wards, and at

the same time separate them from each

other. They also lessen the danger of des-

truction of the whole asylum by fire, afford

more sunlight upon all parts of the build-

ing, and facilitate the circulation of air

around and between the buildings. By

this mode of connecting, by corridors, the

buildings arranged in echelon, the view from

the ends of the wards is entirely unob-

structed. The extreme end of the last

building is about 1200 feet distant from,

and 300 in rear of, the center. The ward

corridors are about two hundred feet in

length, fourteen feet in width, with ceilings

of sixteen feet in height on the first and

fourteen feet on the upper floors. The

rooms are placed on one side only of the

ward corridors. A wing is projected to the

rear of each ward, which has rooms on

both sides of a central hall. This rear ex-

tension can be shut off from the front or

main corridor. At the end of the ward

farthest from the center building, in a rear

projection near the connecting corridors,

are located the general service rooms, as

bathing, clothing, wash-rooms, closets, etc.

The ward kitchen is entirely separated from

the ward buildings. The wards are ventil-

ated by independent flues, starting from

near the base-board in each of the rooms

and dormitories, and extending to the attic,

from which the air passes out through the

Fresh air is forced into the building by

the fan at the engine-house, This passes

through an underground tunnel into the

air-chamber in the basement; whence,

after passing over the cast-iron radiators

heated by steam and located at the starting-

point of the air-flues, it enters the ward at

The water supply is furnished from the

city mains, and is ample. The buildings

are lighted by gas obtained from the city

of the superintendent's family, the third is occupied by the other officers, and the Erie County Alms-house, with Popfourth contains the chapel. Upon either ulation of Over 700. side of the central building there will be, when the plan is fully carried out, five THE Erie County Alms-house and Inother buildings, containing in all eleven sane Asylum is located on Main Street, wards for patients of each sex. Of these six and one-half miles from the City the first and second are of three stories, the Hall. The Alms-house is a substantial third and fourth of two, and the fifth and stone building, three stories in height above last, for the most disturbed class, of one the basement. In the rear of the main story only. These buildings are connected structure are the hospital buildings. The by fire-proof corridors thirty feet in length general outlines of the buildings form built on an arc of a circle, with the concavthe shape of a cross, the hospital in the ity to the front. These serve as a means of

> 90 by 65 feet, and is occupied principally as the administration building. The Asylum for the insane, also of stone, is situated near the Almshouse, and consists of a main building 50 feet front by 124 feet deep, with lateral wings 158 by 56, all three stories in height above the basement, exclusive of a roomy garret under a

> rear and two lateral wings extending from

the main building, each having an extent of

145 feet. The main or center building is

Connected with the main building in the rear by a corridor 220 feet in length is the "cottage" annex, a two-story stone building 56 by 65 feet. Farther in rear of the administration building are located the boiler-house, general cooking-room, and dining-room for the officers and employees of the Asylum, and the new laundry. The laundry is a fine stone building 59 by 90 feet, one story in height, divided into four apartments: a receiving-room 12 by 21 feet; a wash-room 28 by 40 feet; a dryingroom 15 by 28 feet, and an ironing-room 30 by 46 feet. It is supplied with the latest approved machinery and apparatus necessary for laundry purposes, and of capacity sufficient to do the work for 1,500 patients.

Immediately in front and to the west of the Asylum buildings is a tract of 81/2 acres of land, having a gentle slope toward Main Street, which was in 1886, through the efforts of Mr. Moest, the keeper, appropriated for park purposes for the insane. The park is beautifully laid out, with winding walks, numerous shade trees, flower beds, and a water fountain in the center. Six canvas tents, 12 by 18 feet, are placed in the park for the use of the patients.

A visit to the Alms-house and Asylum at once discloses the fact that Keeper Moest is untiring in his efforts to alleviate the unfortunate condition of those under his charge. Everywhere in the buildings and about the premises is observed a condition of most scrupulous tidiness; the inmates are well clothed and abundantly supplied with good, wholesome, well-prepared food; they appear happy and well-contented, and everywhere an air of the utmost cheerfulness prevails.

tended to be adequate for 300 patients, Erie County is truly to be congratulated have been fully utilized almost from the upon the very liberal provision which has beginning. ERIE COUNTY ALMS-HOUSE.

The County's first Almshouse was a small stone structure, two stories and basement, located on a tract of 90 acres in the neighborhood of what is now the corner of Fargo and Porter avenues, the building being Its Extent, Character, Cost, and situated about 150 feet north of where the Holy Angels Church now stands. The first inmates received, were Kenaz Pixley, wife, and seven small children, who were

admitted Jan. 8, 1829. A few years later a small frame building was erected near the Almshouse, for the insane, of which there were about 25. This tract of land was bought by the County from the State, the purchase price having been \$29 per acre, and was retained for Almshouse purposes until 1847, when all but ten acres was sold at public auction, the County receiving an average price of about \$80 per acre. The remaining ten acres, exclusive of the broad avenues and acres was sold in 1850 to a man by the parkways known as the Park Approaches. name of Brooks, for the sum of \$12,000. The special character and distinctive fea- and "The Water Park."

In 1847, owing to the rapid growth of the tures of these different public grounds may city and the increasing number of paupers, be thus summarized: it was deemed advisable to provide more I. jury to any of the inmates.

In 1865 an addition for hospital purposes, a stone building 80x45, two stories high, containing twelve wards and several smaller rooms, was constructed at the rear of the Almshouse, and a further extension of the hospital department was made in 1884 by the addition of a two-story frame building, 60x45.

The Insane Asylum, erected in 1848-9, was a building 118x40, two stories in height, situated about 200 feet southwest of the Almshouse building, and of capacity for about 100 patients. Later on a small stone building and wooden pavilions were erected in the rear for the accommodation of the increasing insane.

The central building of the present structure was built in 1874, the south wing for female patients in 1877, and in 1879 the original insane asylum was replaced by the north wing of the present structure, and in 1885 the neat "Cottage" annex at the south of the main buildings was erected.

Upon the completion of the north wing in 1879 the wooden pavilions were cleared away, the grounds regraded, sodded, and shade trees set out, thus making a delightful park for the recreation of the insane in the rear of the buildings.

In 1850 the number of insane in the County Asylum was less than 100; on January 1, 1877, the population was 151, and at the present time 380 - being the full capacity of the present buildings.

In connection with this it may also be stated that Erie County is maintaining about 70 chronic insane patients at other institutions and 125 acute insane patients at the Buffalo State Asylum.

PARK SYSTEM.

Varied Features.

\$1,650,000 FOR RECREATION

Square, Front, Parade, Park, and Parkways Make a Fine System.

By WILLIAM McMILLAN, SUPERINTENDENT. THE total area of the several parks and

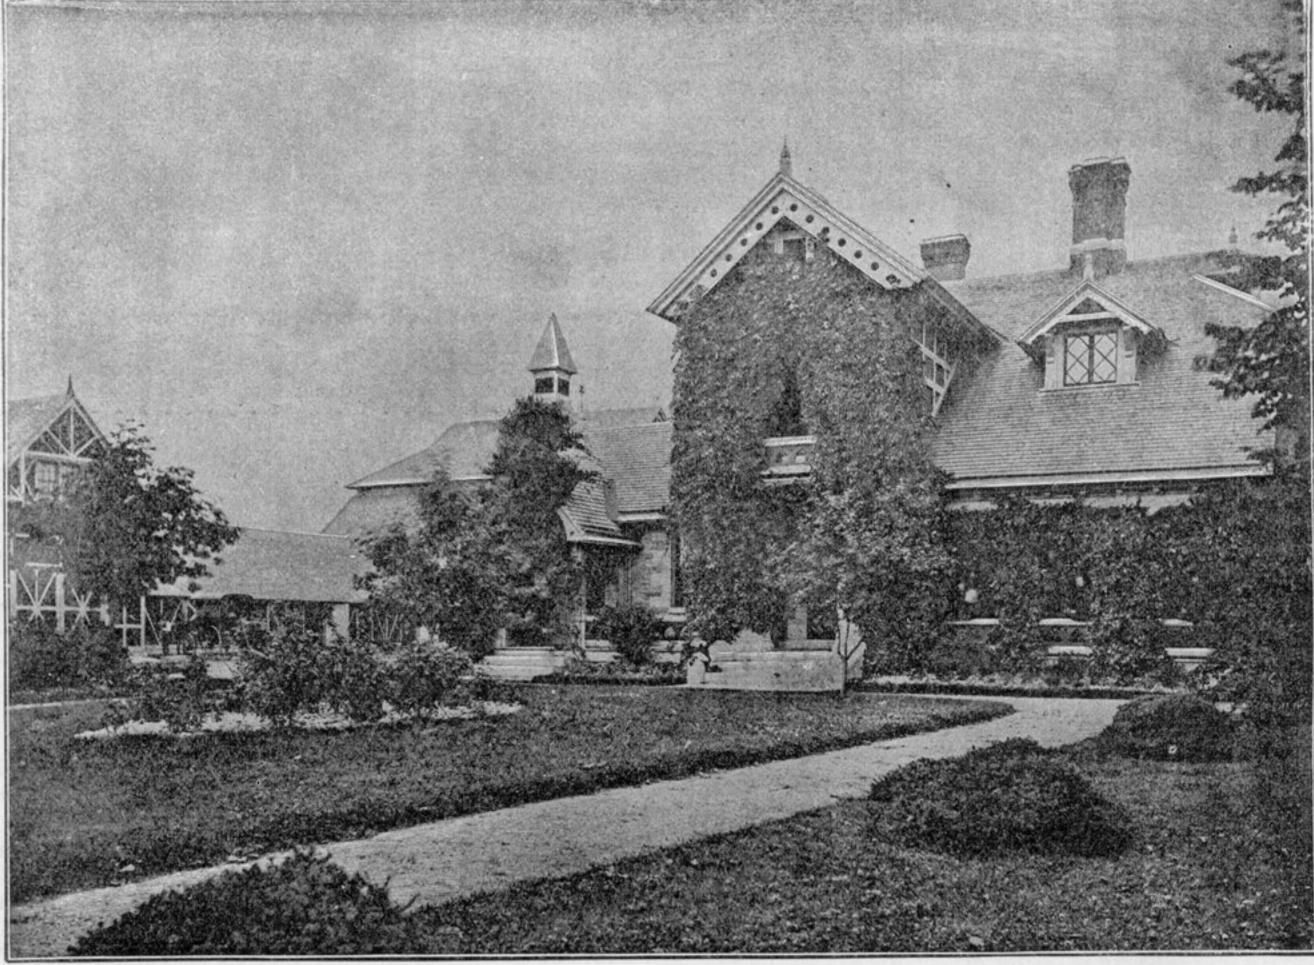

of the grounds. Fort Porter, a military post of 17 acres, adjoins this ground, and the public drive of the Front is continued along the crest of the bluff through the grounds of the Fort. The magnificent prospect and prevalent lake breezes make the sidewalk borders of this drive a popular promenade in the summer months.

III. The Parade, 21/2 miles easterly from the City Hall, and containing 56 acres. Its main feature is a smooth, gently-sloping lawn, designed for military drills, parades, attractive outdoor sports, and popular festivities. A large refectory known as the Parade House, with a small natural grove adjacent, affords ample opportunity for shade, rest, and refreshment.

IV. The Park, 3½ miles north of the I public pleasure grounds of Buffalo is 512 | City Hall, and comprising 362 acres. It is naturally divided into two distinctive parts, named respectively "The Meadow Park"

Small Beginnings.

The original line constructed by the Buffalo Street Railroad Company extended from Central Wharf to a point near the present Music Hall site. The cast-iron rails, each about ten feet long, were from the iron works of George W. Tifft. These were laid upon the pavement, or in the dust, without stringers, bolted together end to end, and kept from spreading by frequent cross-rods. The Philadelphia gauge of 4 feet 10 inches was adopted, and the original cars were of the Philadelphia pattern, resembling in general appearance the two-horse cars of to-day, but far inferior in the quality of the woodwork, upholstery, and furnishings, as well as in the character and adjustment of the running gear. The June 23. Cars began running on the 'bob-tail' cars which are now being rapidly retired to innocuous desuetude came to to operate the lines where the lightness of conductor and driver a financial burden to the company every day in the year. Then, distance," compared to the long journey extensions as early as possible, thus securing

which a half-dime will now secure. When the original Main-street line was extended to Cold Spring an eight-cent through cash fare and a six-cent ticket rate for the entire distance were established. Conductors not committed to a fair count by any bellpunch checks as a conscience-quickener collected the fares and made such returns to the company as their corporation prejudices would permit. Tickets were sold in packages of ten at Breed & Lent's book store on Main street near Seneca, and Anthony Smith's on Main street near Genesee. Later on ticket offices were likewise established at Chase's store on Niagara Street, and at John Welker's on the corner of Genesee and Jefferson streets. Not until the year 1869 was the practice of selling tickets on the cars established, and not until 1873 did the bell-punch, the joint invention of Jas. H. Small, S. V. R. Watson, and Henry M. Watson, come into existence.

At the outset the stables and car-house were located at the foot of Main-street. In the year 1880 the building thus used passed into the hands of the Delaware, Lackawanna and Western Railroad Company, and the present commodious, sightly, and admirably-arranged stables and car-house at the corner of Main and Virginia streets were erected. Mr. Charles W. Miller was the first Superintendent of the road. Next in succession came Mr. Hollard and James H. Small, who were followed by the present Superintendent of the entire system, Mr. Edward Edwards.

After a brief and profitless struggle to build up a paying traffic, in 1868 the Niagara-street Railroad Company transferred through line to Ohio and Main its Black Rock line to its contemporary and went into liquidation.

> The East Side Street Railroad Company was organized in 1874, the capital stock being \$100,000. Its original officers were: Joseph Churchyard, President; Alexander Brush, Vice-president; and Henry M. Watson, Secretary and Treasurer. In 1879 Mr. Churchyard resigned, and S. V. R. Watson was chosen to succeed him. In 1880, when the father of the street-railway system died, the presidency of the corporation passed to Mr. Samuel S. Spaulding.

Mr. Henry M. Watson first became officially identified with the Buffalo Street Railroad Company, of which he is now the head, in 1868, when he succeeded Secretary Coit. Upon the death of President S. V. 1888-Forest-avenue line to the Park R. Watson the executive control of the affairs of the corporation passed into his Jersey and Baynes-street line to the hands, and in June, 1881, at a meeting of the Directors, he was duly elected President

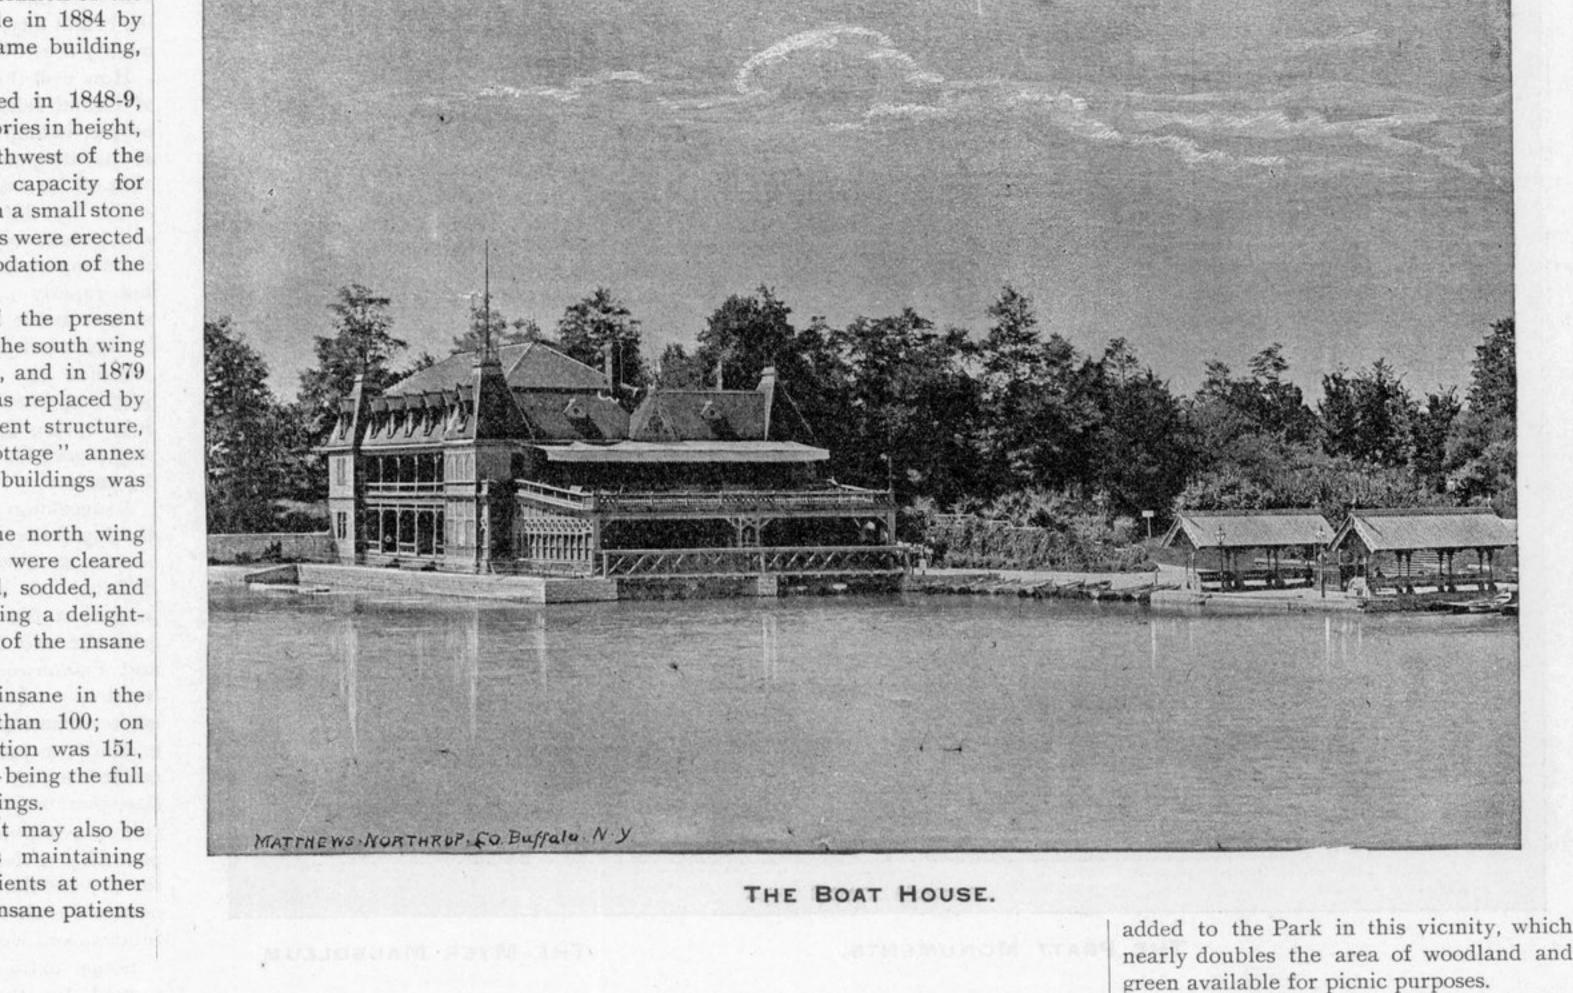

But the honored name of S. V. R. Watson must not be allowed to pass from this record without a parting tribute. To him who first secured to the city the benefits of a tramway system, developed during his own term of life beyond the limits of conservative wisdom, is due a debt of gratitude which the Buffalo of to-day and the Buffalo of the future should never forget. It matters not what others might have done - he did the most that was possible in his day and generation, and no man deserves a higher place on the roll of benefactors of

the city of his home. To all who knew him intimately and recognized his merits it was a source of profound regret that the closing years of a life so earnest and zealous in the public service should have been clouded with financial misfortune.

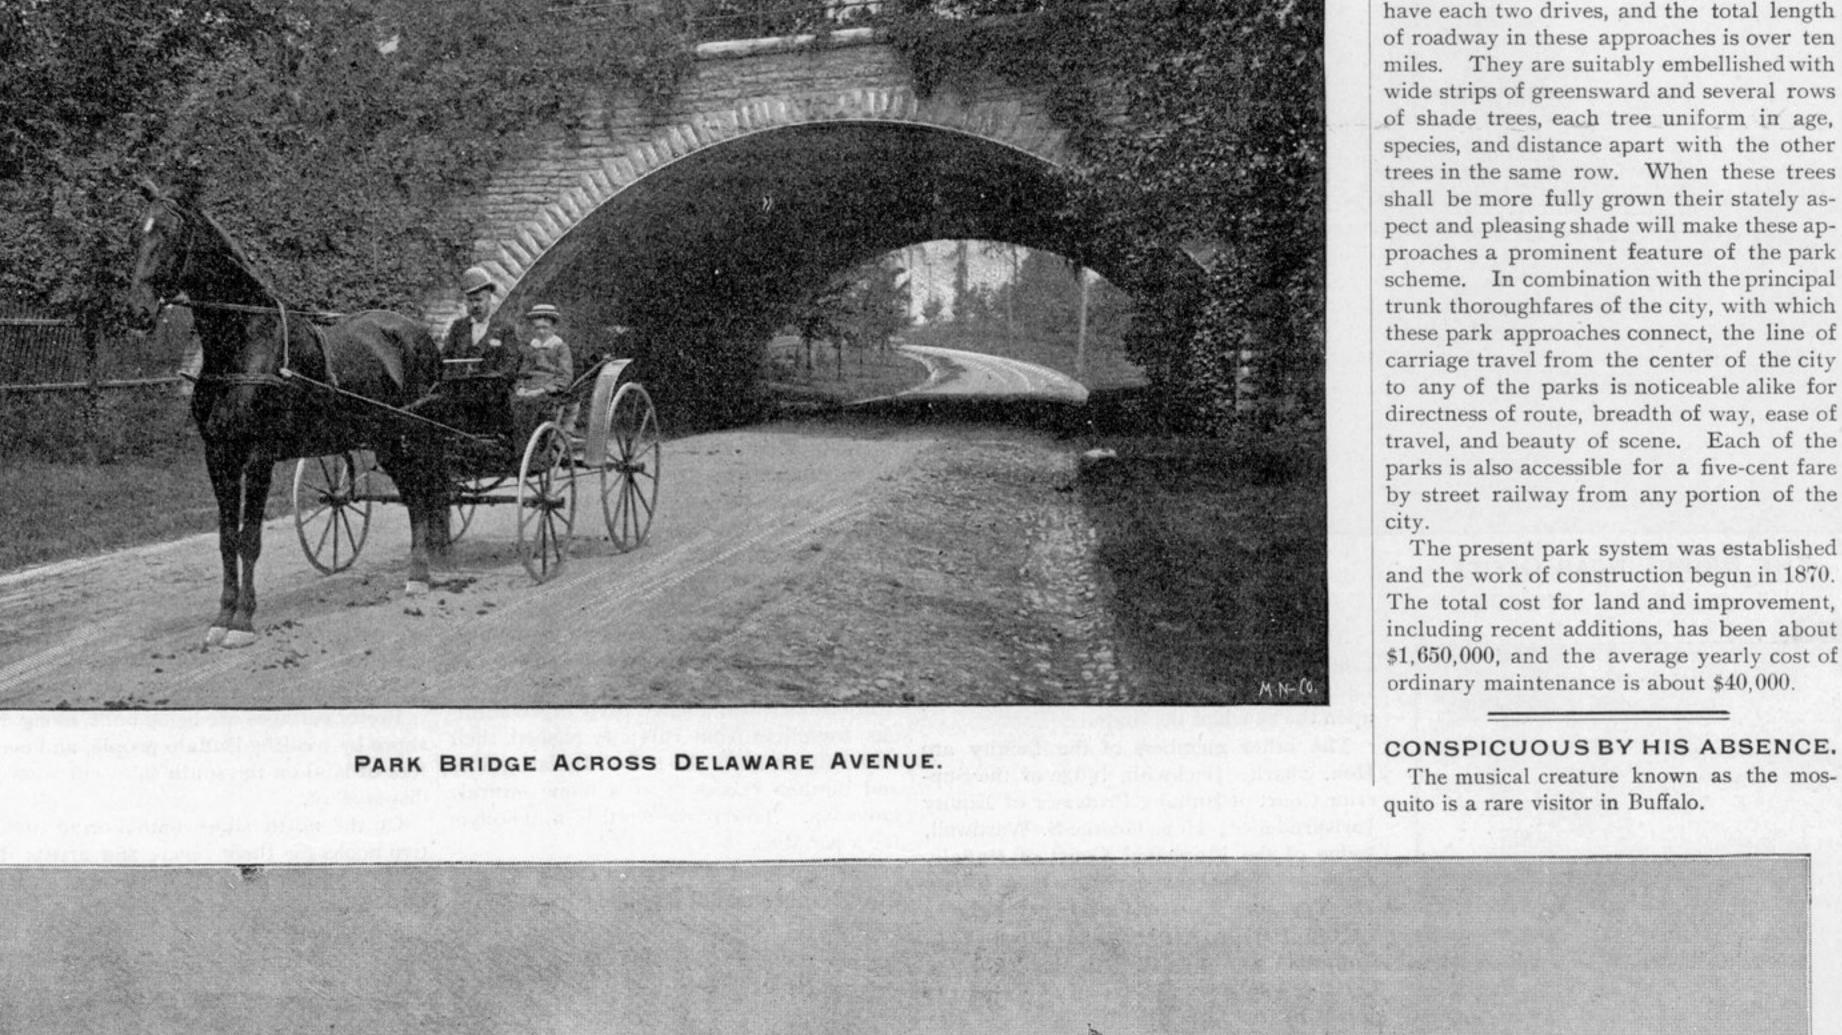

Recent Growth and Development.

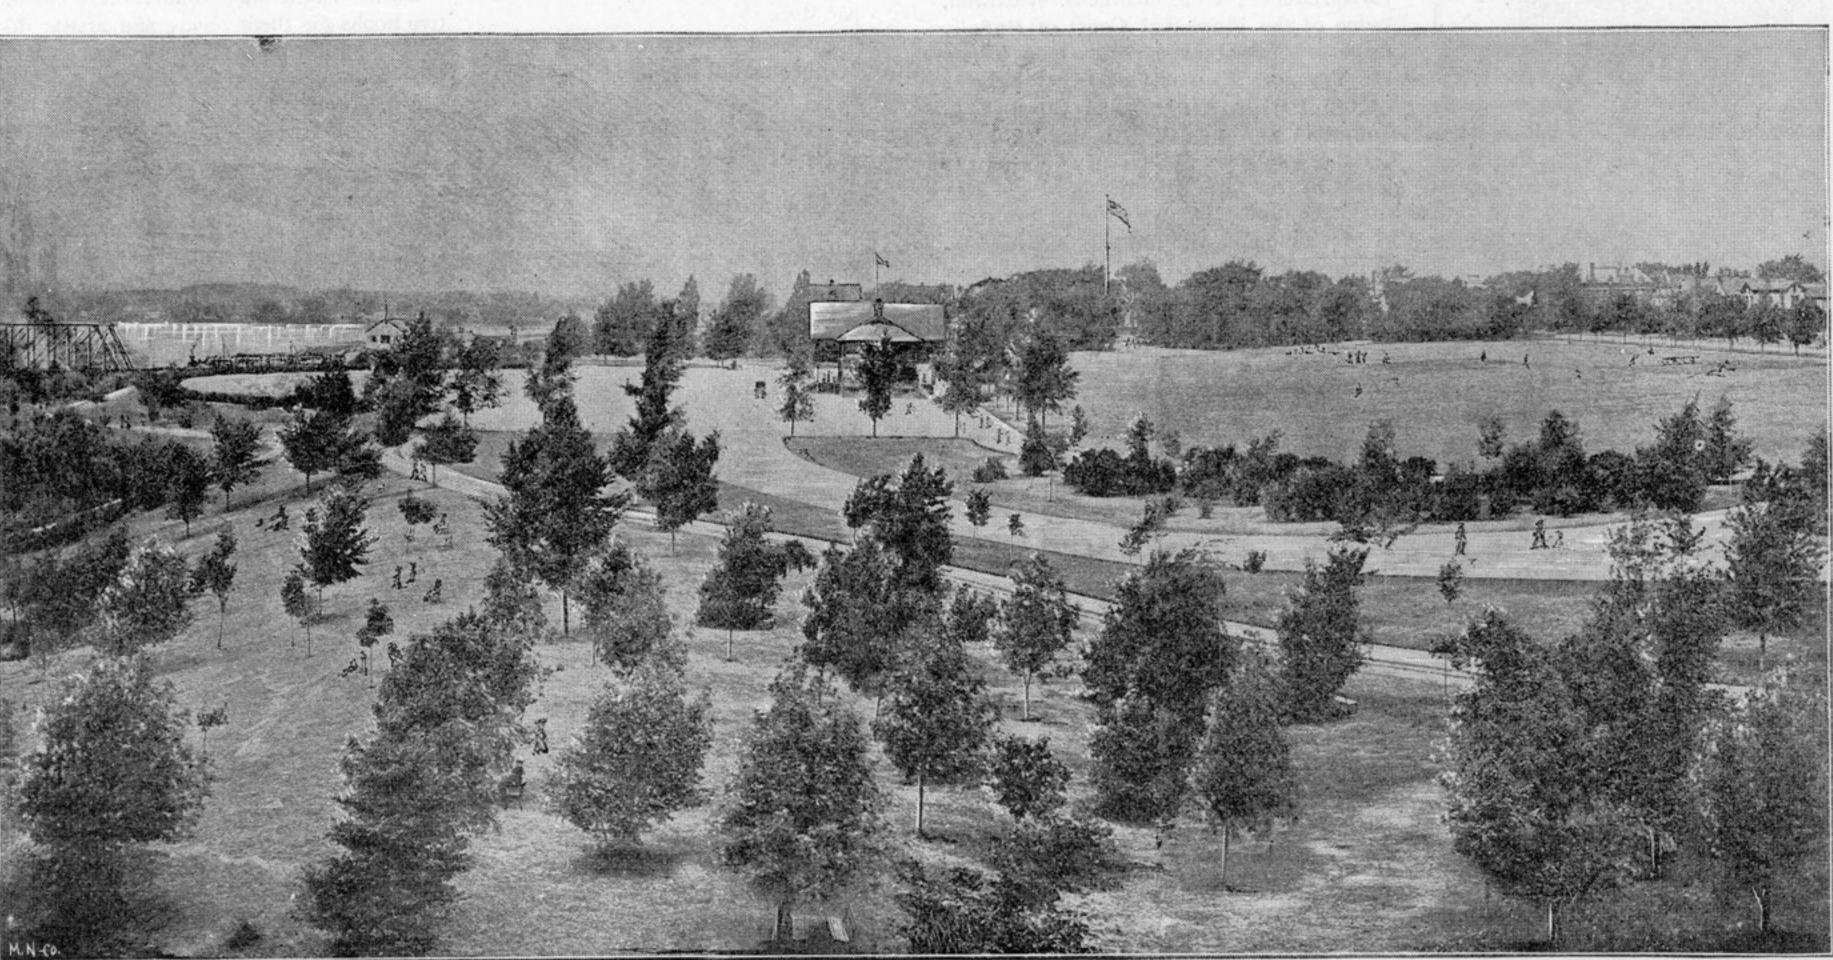

The dawn of Buffalo's new era of prosperity was just beginning to light up the eastern horizon at the time when Henry M. Watson and Samuel S. Spaulding became the official heads of the two branches of the Buffalo street railway system. The from the crudities of the original idea. The officers were: S. V. R. Watson, Presi- spirit of progress was in the air, and the Queen City of the Lakes was seeking to shake off the lethargy of the two preceding decades. Were the new Presidents the men for the hour? Let their works speak. With conservative capital seeking a secure investment at command, with full confidence in the future of the city to lead them on, with the fire and force of youth to impel them to action, persistently they pushed new lines into new fields and patiently they tion demanded means of transit more rapid pose of this company was to build a line toiled to perfect the lines long established. and convenient than those given by the from Main to Amherst streets, with a double The city has made wondrous strides toward metropolitanism during the last decade, and no one who recognizes the close relations existing between the tramways and the suburban settlements will hesitate to accord to the street railways of Buffalo the credit of having given a great impetus to the settlement of new sections. Nor have the two companies waited for regions to become thickly populated before furnishing transportation facilities, and very often the railway has preceded the houses into new terri-

> In this age of land speculation, when projected improvements are as a rule kept under cover until the projectors or their friends have secured all the purchasable real-estate which the improvement is destined to augment in value, it is fair to say that the officers and stockholders in the Buffalo street railways have never sought to acquire wealth in this manner. It has been their theory that the advantages flowing from an extension town several years later, their mission being belong, not to a few speculators with facilities for securing advance knowledge, but rather traffic made every two-horse car with a to the great body of property-holders in the new territory, who have patiently paid their taxes year after year with expectation of as now, the fare was five cents, but the reaping a harvest by and by Accordingly length of the ride was really a "walking they have always made public their intended

Cars vs. Shoe Leather.

economics was recently brought to the at-

tention of the writer. "Do you know that

car-fare in Buffalo is cheaper than shoe

leather?" inquired a man of figures of the

scribe. "Well, it is. How much do you

pay for your shoes? Six dollars, eh!

Well, six dollars is 120 nickels. A nickel

will carry you from the foot of Main Street

to Hertel Avenue on the Niagara-street

line—a distance of five miles. Then 120

nickels would carry you 120 times five miles,

or 600 miles. After you had walked 600

miles in all sorts of weather, how much

would be left of your \$6 shoes? Then look

at it in another light. The running time

of the street cars from the foot of Main

Street to Hertel Avenue is 52 minutes. It

would take you at least 30 minutes longer

to walk that distance. Save that 30 min-

utes 120 times and you have 3,600 minutes

On all these routes a as to warrant an electric equipment throughthrough five-cent fare is now the rule. out the city. The conductors have been neatly uniformed and the employes carefully trained in their respective duties. A sufficient number of open summer cars to provide for the entire traffic have been placed on most of the routes to enhance the comfort of the patrons, regardless of the fact that in this latitude these cars must stand idle nine months out of every twelve. On Niagara and Main streets a 12.30 P. M. car is now run to Black Rock and Cold Spring for the accommodation of those who are detained down-town until after midnight. This is not all, but it is sufficient to prove that the managers are not indifferent to the convenience and comfort of their patrons.

Handling Crowds.

Both companies pride themselves upon their facilities for handling great crowds. These are equal to every demand, excepting, possibly, the requirements of general holidays, such as Decoration Day or the 4th of July, when the whole city turns out en masse to see a procession. On circus days, fair days, race days, and all other special occasions calling out vast yet concentrated prowds, the entire reserve force is placed upon the burdened lines to handle the traffic. An example of how quickly and with what little confusion this is done will be seen in the special arrangements made by the Buffalo and the East Side street-railroads to transport to and from the Driving Parks the great multitude attending the International Fair. At the close of each ball game at Olympic Park this season sufficient cars have been in waiting to come down town the entire body of spectators, and throughout the amusement season a car on each route starts from Seneca Street at the close of the theatres, thus giving the amusement seekers cheap transit to their homes.

Another public convenience which is praetically a costly gift from the street railway companies to the public is the spacious meeting-room at the corner of Main and Niagara streets. Very few companies in other cities burden themselves with the expense of maintaining such a convenience on one of the most eligible business corners of the

To what extent the establishment of new routes has added to the taxable property of the town by encouraging the building of homes in regions not otherwise available for residence purposes. Certaiu it is, however, that the sum total is far up in the millions

Care for Employees.

But while the officers of the two companies have been mindful of the public, they have not been forgetful of their own. Never for an hour have the interests of their 600 employees been lost to sight. In the third story of the building at the corner of Main and Niagara streets comfortable reading and waiting rooms are maintained, where conductors and drivers can warm riding 600 miles?"

FOREST LAWN.

A Spot Where Man and Nature Try to Make Death Less Hideous.

THERE are several burial-places of considerable extent and adornment in and near Buffalo; but Forest Lawn is the largest, oldest, and most beautiful among

It was said by the witty Luttrell that the knowledge of the fact that Rogers, the poet, was in the habit of writing memoirs of his deceased friends added a new terror to death. Contrariwise, it would seem to the present writer that the expectation of being buried (after death) in Forest Lawn Cemetery, might serve to take away many unpleasant thoughts from the contemplation of dissolution. It would be difficult to select a more delightful spot for one's last resting-place. Grass and flowers and trees, the peaceful quiet of the scene, and its many picturesque aspects render this City of the Dead about as nearly ideal as it is possible to attain or even to imagine. Forest Lawn is most advantageously situated. On the North side it adjoins the Park, with its beautiful lake and scenery. It reaches across from Delaware Avenue to Main Street. It is not low and flat, but contains hill and dale and undulating land, by which beautiful points of view are multiplied. Its many roads and paths are kept in the most perfect order. No ugly weeds awaiting the return of their cars. The obtrude themselves upon the observer's eye, but all is smooth, well-cared-for, and in pleasing good condition. ployees are permitted to pay for the same in

The cemetery has two principal enweekly or monthly instalments. It is liketrances, one at Main Street, accessible by street cars, the other at the corner of Delaa large quantity of coal every year, when ware and Delavan avenues. At each of these entrances stands a lodge.

Entering from Main Street, the visitor comes with a few steps to the Vault and Chapel. Within this vault, in case of severe winter weather, bodies can be temporarily lodged, while burial services can be held when desired in the adjoining chapel. Passing further inward, the visitor comes upon innumerable tombs and graceful monuments, from the simple marble slab Electricity and the storage battery are to the lofty obelisk, worthy of a Cæsar or and in some instances quadrupled during the the supreme hope of progressive street a Cleopatra. or 60 hours more to devote to business. A scape garden. Besides the planted flowers, in a dismal intra-mural vault amid a city's fair working day is ten hours. Accordingly hundreds of graves are ornamented with 60 hours represents a week's work. Would rare bouquets, placed thereon by loving you rather wear out your shoes and waste hands. The greenness and luxuriance of a week than to pay \$6 for the privilege of the turf are remarkable in this cemetery. In looking on this fresh and cheering greenbeauty, and of freshness, until death seems Howard

swallowed up in life. It is fortunate that the old system of intra-mural burial is about done away with. Leaving out the sanitary considerations, one realizes after a visit to Forest Lawn the almost infinite desirableness of locating a necropolis outside the city and away from its noise and turmoil. Those who have visited the ancient grave-yards of large cities will appreciate the force of this observation. Nothing more dismal can well be imagined than some of the ancient cemeteries in London, where, amid the constant noise, it seems almost absurd to speak of the repose of the dead. The tomb, and even death itself, appear less dreadful when set in one of Nature's most beautiful pictures.

Of course, philosophically considered, it is of small consequence where one's wornout body is deposited. But all people are not philosophers; and so long as human nature remains as it is the living will love sights and sounds of Nature, rather than bench and bar of the city.

ceaseless din and roar.

In the year 1864 Forest Lawn Cemetery was legally incorporated, and the following gentlemen were appointed as trustees: Dexter P. Rumsey, George Truscott, Lewis F. ery death is almost banished from the Allen, Everard Palmer, Orsamus H. Marmind; and instead of gazing upon those shall, Russell H. Heywood, Dewitt C. objects which the word cemetery usually Weed, Sidney Shepard, Oliver G. Steele, calls up, we look upon a scene of life, of Henry Martin, Francis H. Root, George

R.

Conesus and Silver Lake.

If Chautauqua is an old story, I hope some one will persuade you to put a bathingsuit and sun-hat in your valise, and buy a ticket good for thirty days to either Conesus or Silver Lake. There you may exist in tents, a la Arab, broil your own steak, and string up your own hammock.

Silver Lake has the advantage in point of age, but Conesus is making up time by growing fast.

Both bodies of water were cut out as smoothly as tin cups, and consequently lack the grandeur of rougher scenery, but Silver Lake, with its clear water and white little town on the Canadian shore just crown of pond-lilies, is an unwritten so- across from Buffalo, but modern usage has nata, and Conesus by moonlight is a poem.

Muskoka.

Not only does the Queen City reign over the most beautiful bodies of water in her own country, but her imperial arm reaches out over the Canadian lines of travel and dition to the natural advantages of the place claims the health and happiness abounding in the vast net-work of lakes and rivers of

the adjacent Dominion. Muskoka, until a small party of adventurcus travellers from this city pushed their way thither with the aid of Indian guides foot of land on the south side will soon be and birchen canoes, was a name entirely disposed of. unknown. To-day the word is a synonym

for a paradise, steamers through all the navigable rivers to for a restful afternoon with books or pencil the points of interest, and the Grand Trunk | could be imagined. Railroad extends as far north as Lake Nipissing, a most delightful field for the tourist and sportsman. All along the line, bright little villages are springing up, with comfortable hotels for the convenience of the

"Up the Lakes."

This brings us to the favorite method a Buffalonian has of disposing of a twoweeks vacation. Be he young or old, rich or poor, it is the duty of every man, at some time in his life, to don a flannel suit, small hat, and amiable expression, take all the family and money with which he is endowed, and "go up the lakes."

The steamers forming the fleet running between Buffalo and Duluth via the south shore of Lake Superior are too well known to require individual description.

Idlewood.

A number of our business men, realizing their duties in the city, were fortunate people; the Park, for the whole city, with enough to obtain possession of the finest | the boating on Gala Lake, the Park-house point on Lake Erie for this purpose.

The Idlewood Association was formed pered, healthiest, and therefore handsomest

and their families lived at first in tents in the most primitive style imaginable; now all the city conveniences are found in the cottages; gas is manufactured on the ground, sewer connections are as complete as it is possible to make them, and water works bringing the water from the lake to a tank which supplies every house were

recently put in. The Lake Shore road gives them an independent station one mile from the grounds, to which a 'bus runs from every train. For a complete history of Idlewood, converse with Judge Stern, who is an enthusiastic Idler.

Angola.

Time, as well as circumstance, alters cases. In the winter season Angola is pleased to lie so near the great city of Buffalo; while during the summer Buffalo is proud to call itself a neighbor of the wideawake little place which attracts hundreds of visitors to its woods and lake beach every year. Angola is two miles down the shore beyond Idlewood.

The camp, which in reality consists of four large summer hotels, is growing more popular every year.

Grand Island.

By this time the reader must be convinced that there is a foundation to Buffalo's claim to be a city with pleasant neighbors. If not, and there lives a man The McRattles, with a long baggage train with soul so dead as to require further majority of Buffalonians as Niagara Square, soon hurries you on to the spot which the late David Gray, in his poem "The Last of the Kah-kwas" describes as

" An isle locked in Niagara's fierce embrace, Like love in the clasp of kindness."

The island is six miles wide and about twelve miles long, affording a continuous river front from the northern limit of Buffalo to within a trifle over a mile from the Falls-at one end the sight and sound of the bright city, at the other the spray and mighty roar of the cataract.

How well the advantages and attractions of Grand Island are appreciated by the people, is amply indicated by the number of charming summer villas that have been built on its river fronts during the last few years, by the magnificent establishments which some of Buffalo's prominent social clubs maintain there, and by the extensive and rapidly increasing patronage of the various picnic resorts and hotels provided for the entertainment of the visitor.

Beside the well-known McComb, the hotels at Sheenwater, Niagara View, and Sour Spring Grove afford delightful stopping places for picnic and yachting or fishing parties.

A suggestion from the Hon. Lewis F. Allen developed the summer club idea, which has become so much a feature of social life in Buffalo. A number of wealthy citizens jumped at the suggestion, and from this grew the two fashionable clubs, Oakfield and Falconwood, each numbering several hundred members. They bought two fine estates fronting on the river, laid out the grounds in parks, and each organization erected a fine club house, magnificent in size, picturesque in architecture, and perfect in equipment. [For illustrations see page 12.] Private steam yachts ply between the city and the club grounds, and the mem bers and their friends spend many delightful days and weeks "down the river."

Some extraordinary anticipations are nursed by the natives concerning the Island's future. Among these are projects ing the year round, and a third ferry now run midway between the old ones; with excursion steamers running between the main shore and the Island daily, and small passenger steamers stopping at every landing, there is, notwithstanding, a concerted movement in favor of a bridge to connect are equal to about eight per cent. of the cost of a suitable iron bridge; that instead of eight per cent. money can be had for the purpose of building a bridge at less than four per cent., and that a bridge would at the same time enhance Grand Island property many per cent. Taking this view of the matter, a majority of Grand Island owners are agitating a scheme for bonding the town for a bridge. The proposition of running the much-talked-of Niagara Falls Boulevard over to the Island gave an impetus to the movement not long ago.

Fort Erie.

Fort Erie is the name of the historic so modified the meaning that when the average Buffalonian hears "Fort Erie" his mind instantly reverts to the charming little summer resort of that name two miles southwest of the forgotten town.

are bringing there a large number of people who wish to pass a pleasant afternoon, week, or month, as it happens. Pretty cottages are being built along the shore by wealthy Buffalo people, and every

In his opening the War; ever ready in his later years to furnish the capital to build up systems essential to the convenience of the public and sustain enterprises calculated to advance local prosperity, Mr. Spaulding finds himself at four-score possessed of fair health, abundant property, the esteem of his surviving contemporaries, the respect of the younger generation, and, better than all, the capacity to derive pleasure from all

A life so long, so diversified, and so fruitful can be but briefly sketched at best within the limits of this article.

these gracious gifts.

Elbridge Gerry Spaulding was born February 24, 1809, at Summer Hill, Cayuga County, N. Y. His grandfather was one of the heroes of Bunker Hill, his father a valiant soldier in the Revolutionary War, and his mother the devout daughter of a Presbyterian clergyman. Thus the boy inherited patriotism from one parent, and derived religious impulses from the other. His earlier years were passed in storing his mind with useful knowledge at Auburn Academy. Having chosen the law as his profession, at the age of 20 Mr. Spaulding began a course of reading in the office of Fitch & Dibble in Batavia, which lasted two years. The young man, being dependent upon his own resources, taught school in winter and acted as assistant to the county clerk or recorder. In 1832 he entered the law office of Harvey Putnam at Attica, where two years more were spent in hard study. In 1834 he was admitted to practice in the Court of Common Pleas of Genesee County, and very soon thereafter came to Buffalo to take a place in the office of Potter & Babcock, a leading legal firm of that day. Having been subsequently admitted to practice in the higher courts, Mr. Spaulding in 1839 formed a partnership first with George R. Babcock, and later with Heman B. Potter. This arrangement lasted until 1844, when Mr. Spaulding severed all other business connections to become the law partner of the Hon. John Ganson, with whom he remained four years. Thenceforward the lawyer was lost to sight in the legislator, the statesman, the banker, and the capitalist.

The first political office held by Mr. Spaulding was in 1836, when he was appointed City Clerk. Five years later he became the representative of the Third Ward in the Common Council, serving as the Chairman of the Finance Committee throughout the term. In 1847 he was elected Mayor of the City, and during that administration many measures of great utility and importance were adopted, among them the establishment of an extensive sewerage system, the organization of the Buffalo Gas-light Company, and the enlargement of the commercial facilities of the canal and harbor by the State confiscation of the Erie and Ohio basins.

The following year found Mr. Spaulding in the State Assembly at Albany, and the year after that his district sent him as its Representative to the Thirty-first Congress In 1853 he was elected State Treasurer of New-York. While in each of these offices the subject of this sketch displayed rare mental attainments, versatile talents, and a keen insight into public affairs, the chief basis of his renown was his remarkable grasp of financial problems. In these matters he seemed gifted with an infallible instinct, and whenever the course recommended by him was adopted the outcome demonstrated his wisdom and foresight. Then, as now, he stood in the front rank of the best financiers of the day.

All that Mr. Spaulding accomplished previous to the Rebellion, however, will have but a transitory place on the pages of recent history. It remained for him in a National crisis to render a service to his country which will never be forgotten nor underestimated while the Nation endures. When the Thirty-sixth Congress, of which Mr. Spaulding was a member, assembled at Washington, it was confronted at the outset with an empty treasury and the task of providing the financial means for the crushing out of the great Rebellion then in progress. Secretary Chase was opposed to the issue of treasury notes, and to meet the exigency of the hour recommended to Congress the passage of the "National Bank" Act, which provided that the entire money of the United States, exclusive of coin, should be issued by the national banks un- empt from tax, \$14,176,710. Bonded debt, der the authority of the Government. Mr. \$8,481,669.

JAMES MURDOCK SMITH.

The following biography is a condensation

his town. In 1824 he moved to Gouverneur, St. Lawrence County, New-York, where he passed the remainder of his life and died in 1864.

Mr. Smith's education began in the village school and was continued at the Gouverneur Academy. He began the study of the law in the office of Bishop & Thomp son, at Granville, in Washington County In 1835 he went to Albany and entered the office of Hon. Edward Livingstone. In November, 1837, he was admitted to the bar. In February, 1838, he moved to Buffalo, then a city of small proportions and struggling to recover from the financial disasters of 1837. He formed a partner ship with Henry W. Rogers and John Leonard, but this was dissolved with the retirement of Mr. Rogers, and Leonard & Smith continued a year or so longer, when Mr. Leonard moved to Detroit, and Mr Smith became associated with James Smith and so continued till 1840, when Mr. Smith again went into partnership with Henry W. Rogers. This firm became noted and prosperous, and conducted a very large law business till 1848, when, Mr. Rogers having become Collector of Customs, the firm was dissolved and Mr. Smith associated himself with the late Solomon G. Haven, who had been till that time a partner of Millard Fillmore.

The firm of Haven & Smith was a successful one and had a large and lucrative practice, and Mr. Smith made himself more than ever acceptable to the solid financiers of Buffalo, and was recognized as a man peculiarly adapted to banking and busines affairs. In 1856 he was persuaded to abandon the law and take charge of White' Bank as its cashier, and a year later, when the Clinton Bank was started by some of the ablest and soundest men in Buffalo and New-York, he became its cashier. The financial disasters of that well-remembered season did not wreck the Clinton Bank, as

PASCAL P. PRATT.

PASCAL P. PRATT.

"These are the simple facts of my life; their presentation in the briefest form, without compliment or comment, will please me best; let the public draw its own conclusions," was the parting admonition of Mr. Pascal P. Pratt to the writer who was detailed to secure the data for his biography. Accordingly, should the outline of the career of the modest banker, for whom every one has a word of praise, seem cold and colorless, the wish of Mr. Pratt, and not the will of the biographer, may be held responsible.

Pascal Paoli Pratt was born in the village of Buffalo, Sept. 15, 1819, and has been a life-long resident of this city. His early education, derived from the public schools, was supplemented by a preparatory course at Hamilton Academy, followed by a two-years' course of general study at Amherst College. At the age of 16 he became a clerk in the extensive hardware store of Pratt & Weed, where under the direction of his elder brother, the late Samuel F. Pratt, who was the senior member of the firm, he received the business training and acquired those correct habits which are the secret of his success and the key to his popularity.

In 1842 Mr. Pratt acquired a partnership interest in the business, the firmname becoming S. F. Pratt & Co. Four years later Edward P. Beals entered the firm, which then became Pratt & Co.-a business title which continued for nearly forty years unchanged amid all the commercial vicissitudes of the times. In 1857 Pratt & Co. organized the corporation known as the Buffalo Iron and Nail Company, holding the stock themselves, and built extensive rolling-mills and a blastfurnace at North Buffalo. These iron industries, which gave employment to several hundred men, were operated successfully until 1880, when the blast-furnace was leased to other parties and the rolling-mill

diverted to other uses. member of the firm of Pratt & Letchworth, manufacturers of saddlery-hardware, which, starting on a small scale, has developed into one of the most important local industries, employing several hundred men.

From the death of his brother, Samuel F., in 1872, up to three years ago, the burden of the management of all these large enterprises rested chiefly upon Mr. Pratt, and under his prudent care each and all flourished, yielding not only a liberal support to the employes, but likewise returning a fair income on the invested capital.

When the Manufacturers' and Traders' Bank was established, some 35 years ago, Mr. Pratt was elected a director, and also vice-president. These positions he retained until July, 1885, when, at the earnest solicitation of the stockholders, he accepted the Presidency, and disposed of his interest in the firm of Pratt & Co. in order that he might give to the financial institution the full benefit of his life-long experience and matured judgment. In this office he still continues. He has likewise been a director of the Bank of Buffalo since its organization, and a director of the Third National Bank of Buffalo and the Bank of Attica for many years. Many other offices of honor, trust, and responsibility are likewise held by Mr. Pratt. He is a director of the W. N. Y. & P. Railroad, a trustee of the Buffalc Gas Light Company, vice-president of the Buffalo Street Railroad Company, president of the board of trustees of the Buffalo Female Academy, president of the board of trustees of the Young Men's Christian Association, treasurer of the Forest Lawn Cemetery Association, vice-president of the Civil Service Commission. a trustee of the North Presbyterian church, a trustee of the Buffalo Orphan Asylum, trustee and treasurer of the State Normal School at Buffalo, and a life-long member and supporter of all the organiza-

of literature, science, and art in this city. Mr. Pratt was likewise one of the originators of the Buffalo Park system, the first President of the Commission which established it, and the Chairman of the Park Commission from 1869 to 1879, when he resigned. A more recent service, in a still broader field, was rendered not only to the people of Buffalo but likewise the entire State by Mr. Pratt, as one of the three commissioners appointed by the Supreme Court to appraise the value of the property taken by the State for the purpose of the State Reservation at Niagara Falls.

so full of activity, so crowned with success in every direction, and so potent in its influence for good upon the community, can best be closed with the earnest words of the representation. late Judge Sheldon, who after reviewing the life of Mr. Pratt in a carefully prepared and exhaustive paper written for the Magazine He is a power and a controlling spirit in benefit of his counsel. of these offices he has rendered and continues to render helpful service.

It was chiefly through the courage, tenacity, and tact of Mr. Adam, acting as chairman of the Joint Committee on Grade Crossings, that the plan of relief from a great and growing evil was finally accepted by the railroads entering Buffalo, and when, through the agency of the Grade Crossings Commission, of which Mr. Adam is chairman, the proposed improvements have been secured to the city, the grand Union Passenger Station, which is the crowning feature of the new terminal facilities, will stand as a lasting monument to the public spirit of the subject of this brief and inadequate

DANIEL O'DAY.

Whenever in Buffalo it is desired to prove the proposition that by virtue of pluck and tenacity of purpose a man can emerge from obscurity, and elevate himself to a position of responsibility, wealth, and power early enough in life to pass a decade or two in the full enjoyment of his success, the rapid rise of Daniel O'Day is usually cited as a case in point.

Mr. O'Day was born in Ellicottville, Cattaraugus County, in February, 1843. His boyhood and youth were passed upon a farm, and there he built up the sturdy frame and iron constitution which equipped him so well for the prolonged labors and severe tests of endurance which he has undergone. At the age of 18, he came to Buffalo to test the money-making opportunities of the city. His only capital was a pair of strong arms, rugged health, and a stout heart burning with an ambition to succeed. His first foothold in the business world was as a messenger in the employ of

ROBERT B. ADAM

fairs, in all business relations, it is but a just tribute to say that he has ever combined caution, sagacity, and enterprise with an integrity of purpose which no circumstances could alter or permit of a sacrifice Since 1845 Mr. Pratt has likewise been a of principle. A just and devoted husband and father, a true friend, and active in all the years of a pure and useful life in whatever would enure to the benefit of humanity, no man better represents the character of the good citizen. And thus it is that the city of Buffalo, gratefully appreciating his devotion to its best interests, and the example of his stainless life, honors him, in the dignity of his manhood, with its confidence and respect."

H. G. NOLTON.

H. G. NOLTON.

The honorable distinction of being the shrewdest banker in Western New York is usually accorded to Mr. H. G. Nolton, the Vice-president of the Bank of Commerce, and the financial history of the institution over whose affairs he has executive supervision proves that this tribute of praise

About 30 years ago Mr. Nolton began his banking experience as a "trotter," so-called, in the Bank of Genesee. From the first he showed an aptitude for the business which was his passport to rapid promotion. His first important engagement in this city was that of assistant cashier in the Farmers' and Mechanics' National Bank, to which he was appointed in 1863; two years later he was

In 1873, in connection with the late

of the bank are extended almost without limit, but Mr. Nolton throughout his entire career as an executive banking official has steadfastly refused to lend financial aid to those of a speculative turn of mind, or to furnish the means to carry on a business dependent wholly upon the public caprice. Mr. Nolton is the president of the Bankers'

Association of Buffalo, and a director in the Buffalo & Southwestern Railroad, the Crocker Fertilizer and Chemical Company, and the Cataract Bank at Niagara Falls.

Socially Mr. Nolton is highly esteemed and warmly welcomed everywhere. His critical judgment in art matters, particularly as to the merit of paintings, etchings, and engravings, is eagerly sought, and usually accepted as final. His cultivated literary taste and his wide familiarity with the world of letters is well known, and the destruction of his valuable private library, containing many rare books and elegant editions, in the Pierce Palace Hotel fire, was deeply deplored by the literary circles

CHARLES A. SWEET.

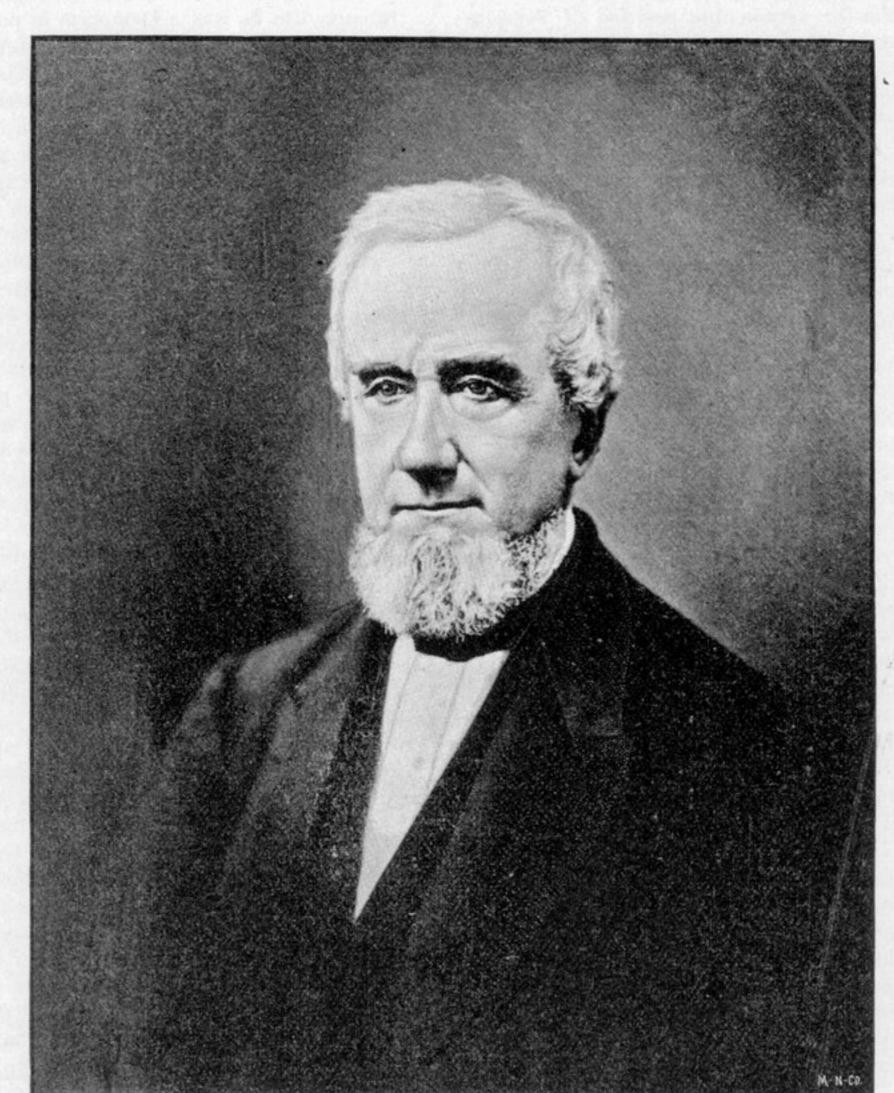

Later on he followed the same calling in Troy, remaining there until 1858, when he went South. Two years later he returned to Troy and engaged in the transportation business, and in the pursuit of that calling he first came to Buffalo in 1862. For nearly a score of years he was actively en-

gaged in the forwarding business here. In 1881 Mr. Sweet became the president of the Third National Bank in this city, and in that capacity has become widely known among the financiers of this section, and has won for himself by his administration of the affairs of the institution of which he is the head the reputation of being one of the most cautious, clear-headed, and sagacious bankers of the city.

Mr. Sweet was president of the Board of Trade at the time when that body entertained the United States Senate Committee on Transportation, and has always been prominent in the work of the commercial bodies whose purpose is to promote the local business interests. He is one of the ex-presidents of the Young Men's Association of Buffalo (now Buffalo Library), and for three years past has been a member of its board of real estate. He is likewise a member of the Grade-Crossings Commission and a trustee of the Buffalo State Normal School, the Buffalo General Hospital, and the Delaware-avenue M. E. Church. In the soundness of his conservative views, and when his counsel has been followed the result has proved his wisdom and fore-

CHARLES W. EVANS.

Charles W. Evans, one of the proprietors of the Evans Elevator on the Evans Ship Canal, has been engaged in active business pursuits for the past fifty-three years, and in the grain elevating business since May 1, 1847. He is the oldest surviving elevatorowner in the city, having operated the Evans Elevator for more than forty-one years; during this time the elevator has been destroyed twice by fire, in 1862 and 1864. In 1864 Mr. Evans sold a half-interest in the property to George W. Tifft, which interest is now owned by the heirs of Mr. Tifft. During the whole fifty-three years of his business life Mr. Evans has been located on the Evans Ship Canal, north of and near Water Street. This Ship Canal

G. BARRETT RICH.

G. BARRETT RICH.

Mr. G. Barrett Rich, the president of the Bank of Attica, may be aptly termed a banker through heredity and a natural-born financier. For three generations the institution has been under the management of the Rich family, grandfather, father, and son succeeding each the other as its head.

Mr. Rich is a Buffalonian by birth, the date of his advent being May 5, 1849. His family are purely of English origin, having settled in the town of Eastham, Cape Cod, in 1625. The house built by his greatgrandfather at Brookfield still stands

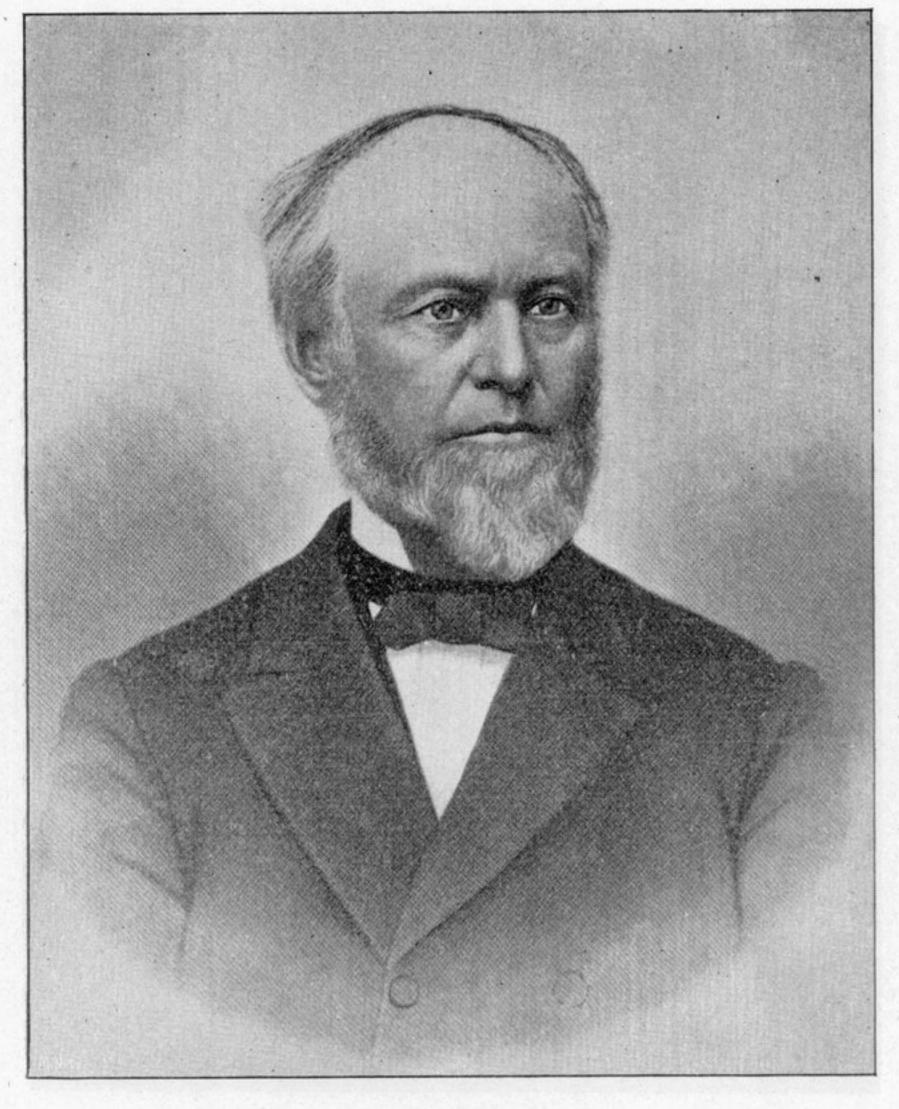

Mr. Rich was educated in Buffalo, graduating June 28, 1867, from the Buffalo Classical School. The years 1863 and 1867 were passed in foreign travel and European study, his journeyings extending to Egypt and the Holy Land.

On returning from his second European tour the young man entered the Bank of Attica as a messenger. This bank was established by his grandfather, the late Gaius B. Rich, in 1836, at Attica, Wyoming County, and is now the oldest bank in Western New York. After some years of service in the minor offices of the time-honored financial institution, Mr. Rich was, at the annual meeting of the board of directors in July, 1880, elected its President. He succeeded, with a few years interregnum, his father, the late Andrew J. Rich, who had been likewise the successor of his father.

Mr. Rich was prominently connected with the National Guard of the State of New-York for about 16 years. He entered the service as first lieutenant on the brigade staff in 1871, and after many advances was finally elevated to the high office of Paymaster-General of the State on the staff of Gov. Cleveland in 1883, which position he held for three years.

For many years Mr. Rich was a member of the Executive Committee of the Buffalo Library and has held many positions of trust and responsibility on the various committees. He is also a life member of the trustee of the North Presbyterian Church. Since 1871 he has been a member of the Masonic order and has held many high

offices in the fraternity. In all the relations of life Mr. Rich is held in the highest esteem, and he is everywhere regarded as one of the best local exhave some more substantial basis than bril- amples of the advantages of wealth, family liant expectations. To such the resources | culture, education, and travel wisely turned to good account.

RUFUS L. HOWARD.

RUFUS L. HOWARD.

Personal popularity, abundant wealth, social prominence, and a spotless reputation each of these is accounted an attainment worth seeking, and he who grasps them all is usually regarded as one whose life is richly crowned. Judged by this standard, or by any other measure of excellence, Gen. Rufus L. Howard may be regarded as one of the foremost citizens of Buffalo.

Mr. Howard was born in the town of Litchfield, Herkimer County, N. Y., October 30, 1818. He attended the district schools, and at the age of 15 began his business career as a clerk in a country store in the village of Schuyler. Three years later an illness of two years' duration seemingly blighted his fair business prospects and diverted his life into new channels. Upon his recovery he came to Buffalo to seek employment, arriving here May 6, 1839. His first foothold here was a \$200-a-year engagement in the grocery and ship chandlery of H. C. Atwater & Co. He soon became the head-clerk in this store, and in less than two years had so impressed his employers with his ability and character that they voluntarily tendered him a quarter interest in the business, to be paid for at his convenience. The firm-name, at that time changed to Atwater, Williams & Co., was successively known thereafter as Williams, Howard & Co. and Howard, Newman & Co. In 1853 Mr. Howard retired permanently from this business to engage in manufacturing.

During the cholera epidemic of 1849, while sojourning with his family in Batavia, the attention of Mr. Howard was directed to a new mowing machine which the inventor, William F. Ketcham, had brought to that village for trial. The apparatus failed to work successfully, and after repeated attempts to overcome the obstacles Mr. Howard was gaged to perfect the machine. During the Trinity. and so thorough was their work that every | tion building fund. one of the 100,000 to 125,000 mowers now appliances and the improvements originally suggested by Gen. Howard. To these two earnest men, then, the one an inventor and the other a capitalist who turned his discovety to practical account, is due the honor of giving the first mowing-machine to the

After the expiration of the mowing-machine patents Mr. Howard extended the operations of his plant to include general machinery and foundry work, and eventually established the Howard Iron Works, which are adequately described elsewhere.

But the life of Mr. Howard has not been altogether a self-seeking existence. As far back as 1840 he became identified with the Young Men's Association, was one of the nine men who subscribed \$3,000 each to start the fund for the purchase of St. James Hall, and subsequently served the Association as its President. He was one of the twelve prominent citizens who inaugurated the Buffalo Park System and was one of the organizers of the Driving Park. He was likewise instrumental in the formation of the Buffalo Club, and subsequently was its President for three years. The Buffalo General Hospital likewise received a share of his attention during the many years that he was a member of the board of trustees. The Vicepresidency of the American Exchange Bank (formerly White's Bank) is likewise one of the positions of trust which has long been accorded him. When the famous \$750,000 loan was made by the city to the B., N. Y. & P. Railroad Company Gen. Howard was one of the committee of five appointed by the Legislature to represent the city in the directory of the corporation. Probably no man in Buffalo has been called upon so often to appraise the lands taken by the several railroads entering the city, and it must be gratifying to know that no appeal has ever been taken from an award made by a commission of which he was a member.

Gen. Howard derived his military title from his appointment by Governor Fenton in 1865 to the command of the Eighth Division N. Y. S. N. G., with the rank of Major General. Through his influence while in commission new life was infused into the Eighth Division, an appropriation of \$38,000 was obtained from the city and county for Fremont-place Armory, and the Bay View Rifle Range was established, of which he was President.

The subject of this sketch has always taken a deep interest in St. Margaret's School for Young Ladies, one of the best of its class in the State, and for three years he was the President of that institution of learning.

CICERO J. HAMLIN.

No man is more prominent in many spheres of business activity in Buffalo than Cicero J. Hamlin. For over 40 years he has been connected with the trade and manufacturing interests of this city. He is the owner of much valuable real-estate and many buildings. He is one of the largest employers of labor in Buffalo, his employees here and elsewhere numbering over 2,500. And he is the originator of the

great International Exposition project. He was born on a mountain farm in Columbia Co., N. Y., bordering on the Massachusetts line, in November, 1819. His direct ancestors, a hardy, long-lived race, were all born in New-England, and his father was a Methodist preacher. He was the youngest of ten children, and his only inheritance — to quote his own words—"Was sound health and a good digestion." In 1836 he came to East Aurora in this county, where three years later he began keeping a general store.

In 1846 Mr. Hamlin came to Buffalo and engaged in the dry-goods business, the firm being Wattles & Hamlin, and the location No. 252 Main Street. In 1847 the firm was dissolved, Mr. Hamlin continuing the business alone until 1852. In 1860 he became a member of the firm of Mendsen & Co. which carried on a wholesale and retail business in carpets and house-furnishing goods. During that year he enlarged his store so that it covered most of the site now occupied by the new block in process of erection. The firm was reorganized under the name of Hamlin & Mendsen, and embarked in the wholesale and retail drygoods business in addition to its former business. The new store was opened on the day that Fort Sumter was fired on -"The bluest day ever seen in Buffalo," says Mr. Hamlin.

The business thus established continued until 1866, when the retail dry-goods trade was discontinued, the firm continuing as wholesalers of dry-goods and wholesalers and retailers of carpets until 1871. Then Mr. Hamlin retired from the dry-goods business, and the Main-street store was leased to Barnes, Bancroft & Co. In 1875 the original iron-front store was built, and was extended 140 feet in 1882. In 1884 the entire Main-street building was leased by Barnes, Bancroft & Co. The new store which Mr. Hamlin is now building for Barnes, Hengerer & Co., occupies the site of the former Main-street stores, and also of a building on Pearl Street, built in 1877 by Barnes, Bancroft & Co., and bought in 1879 by Mr. Hamlin. The new "Hamlin

Block" is the largest store in the city, and

From 1848 to the present time Mr. Hamlin has dealt extensively in real estate, has put up many buildings, and improved much real property in this city.

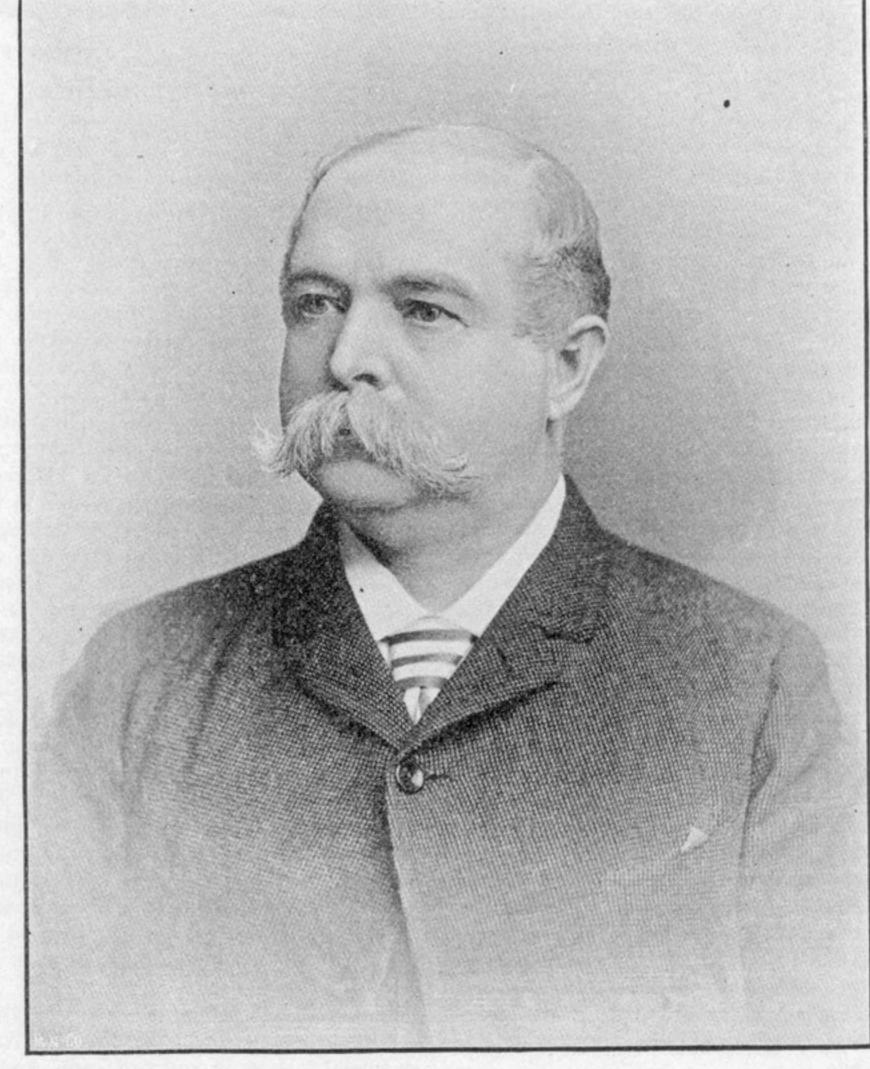

On his farm in the village of Aurora, which now comprises 400 acres of the richest land in Erie County, he began in a very modest way, as early as 1855, the business of improving stock. The Hamlin stockfarm is now one of the most valuable in the country, famous the world over as the home of Mambrino King, Almont Jr., sire of the beautiful and record-making Belle Hamlin, and of other beautiful and choice stock. Mr. Hamlin loves a good horse and never drives a poor one. His farm has done much to improve the quality of stock in Western New-York, as well as through

some fortune out of it, but preferred to

SHERMAN S. JEWETT.

In every city there are half a dozen men patriotic motive, Mr. Jewett could have who seem to rise like stately towers high literally frozen out the city and the smaller above the great mass of mankind. Such a one is Mr. Sherman S. Jewett, the head of master of the situation. He didn't do this, the great stove manufacturing firm and the even though he could have made a handhonored President of the Bank of Buffalo.

Mr. Jewett's early life and splendid busi- carry the whole load on his own shoulders ness career have been recorded many times for the benefit of everybody interested; in various publications dealing with Buf- and these facts and the resurrection of the falo's history, and a brief summary here road from nothingness, all considered, will suffice. Born in the town of Moravia, make the sale one of the most remarkable Cayuga County, N. Y., January 17, 1818, the first 15 years of his life were passed upon the farm. He came to Buffalo May 3, 1834, and entered the employ of his uncle, Isaac Watts Skinner, who was operating a small foundry. Having mastered this business in all its details, in 1836 Mr. Jewett joined the firm of Day, Root & Co. to engage in the same vocation. The small foundry which this firm operated was the seed planted in fertile soil which has grown and expanded into the great house of Sherman S. Jewett & Co. of to-day, whose field of trade covers a continent.

But a vast business which would occupy all the time of an ordinary man has engrossed only a portion of Mr. Jewett's attention. Few citizens of Buffalo have been more closely identified with the conspicuous institutions of the city, or have, while yet living, made a stronger impression upon the character of municipal progress.

Membership in the Common Council in 1845, 1846, and 1849—during which he was occasionally acting Mayor, has amply satisfied his political ambition. In 1878, without his knowledge, he was honored with a nomination for Congress by the party in his district, but his indifferent health forbade his acceptance. In 1880 he was one of the Republican Presidential Electors.

In 1868 the movement to establish the beautiful Park System, which is the pride of the city, first took working shape through a meeting of citizens at his house. He has been a member of the Board of Park Commissioners since the laying out of the grounds, and its President since 1879. He was one of the founders of the Buffalo Club in 1867, a director during its first nine years, and its President in 1874.

In the promotion of facilities for art and literary culture Mr. Jewett has borne a leading part. He was one of the origina- in the history of American railroads. We when Paris was a center of loyal Americans tors of the Buffalo Fine Arts Academy, and take infinite pleasure in placing to the on the continent. Upon our National ocat a time in its early history when its prospects were anything but bright, he came to its aid and endowed it with a sum of \$10,-000, the interest of which should contribute to its maintenance. This opportune though unsolicited bounty fortunately aroused other friends of the Academy, who raised an additional sum equal to Mr. Jewett's gift. a distinct fund, to be called after the donor, works of art.

NELSON K. HOPKINS.

NELSON K. HOPKINS.

The Hon. Nelson K. Hopkins, whose name and face alike have been familiar to Buffalonians for nearly half a century, is a native of Erie County. He was born in Amherst, near Williamsville, and was the son of Gen. Timothy S. Hopkins. At the age of 16 he began to prepare for college at the historic Genesee Wesleyan Seminary at Lima, N. Y., and subsequently graduated from Union College in the class of 1842. School-days over, he decided to adopt the legal profession, and at once entered upon his preparatory studies in the office of the Hon. E. G. Spaulding. In 1845 he was duly admitted to the bar, and thenceforward, up to the present time, with intervals of public service, has continued in professional practice in this city. During the years 1866-67 he was the Collector of Internal Revenue of the 30th District of New-York. In 1871 he was elected to the high office of State Comptroller, and served so creditably that he was re-elected in 1873. At the present time Mr. Hopkins is the Chairman of the Board of Fire Commissioners of the City of Buffalo, and is prominently identified with many of the leading local organizations.

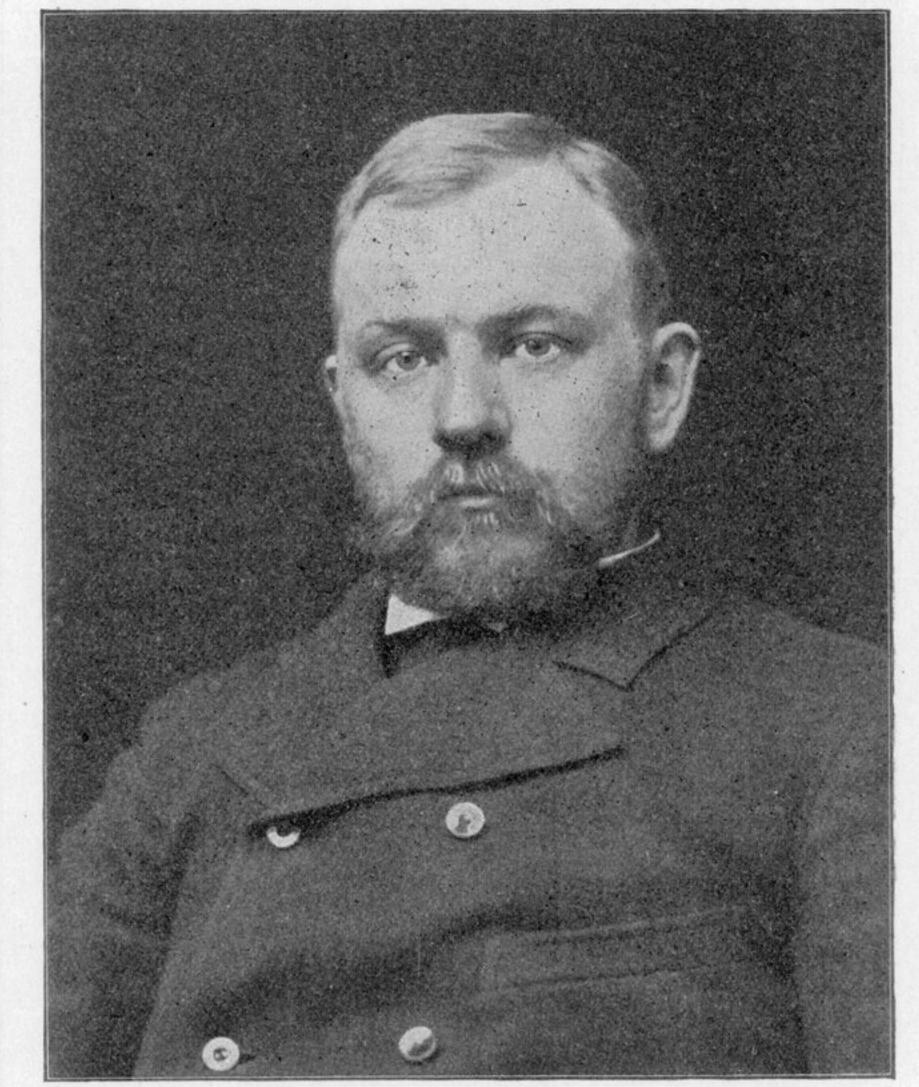

Though he has been so much in public life Mr. Hopkins never sought office. He is a thorough Republican and a staunch friend — eminently a man to be trusted.

A steadfast and enthusiastic Republican, of the American with the Republican party, patriotic citizen, and one of its results has the political counsel and campaign services newly organized to resist the aggressions of no doubt been to store his mind more of Mr. Gluck have always been in demand. the slave interest, and in 1860 was one of richly than would have been possible during He was chosen president of the Central Republican Club, numbering 2,500 members, in 1884, and under the direction of the party leaders he delivered political addresses in the leading cities with distinguished success. France. His absence under this appoint- strength for active public life have risen to In the preparation of the new Republican

caucus system, now in operation in this city and county, the minute and intelligent study of the subject contributed by Mr. Gluck was regarded by his fellow committeemen as a conspicuous and valuable service to themselves, the party, and the public. In the intervals of his legal practice Mr. Gluck has found time for some excellent literary work—so excellent, in fact, that the quality of his contributions to current literature and the local press has given rise to the question whether, in the event of his cutting loose from the law and adopting the profession of letters, he would not rank among the foremost literary workers of the

Mr. Gluck's reputation as a vigorous writer and a polished orator has led to many invitations to deliver public addresses. Among his achievements in this field may be mentioned a discussion of "The Scholar in Politics," before the Cornell Alumni in 1877; an oration on "The Power and Influence of Music," delivered at the laying of the corner-stone of the new Music Hall; and addresses appropriate to the occasion at the Commencements of the Buffalo Medical College, the Buffalo Female Academy, and the Training School for Nurses. Mr. Gluck is also much sought as an afterdinner speaker.

For five years the subject of our sketch has been a trustee of Cornell University. One of his first services in this capacity was

WILLIAM C. CORNWELL.

SPENCER CLINTON.

SPENCER CLINTON.

Buffalo may ascribe much of its present comhis efforts that the Erie Canal and its branches were constructed in this State.

is the grandson of De Witt Clinton, and the third son of Judge George W. Clinton, who 1885, after an illustrious and honored career. The late Judge Clinton married the daughter of John C. Spencer, Secretary of War under Tyler's Administration and a jurist prominent in the revision of the New-York Statutes. By her he had four sons, Maj. De-Witt Clinton, who served in the Army during the Civil War and died at St. Paul; Charles, a civil engineer, who died at St. Louis; Spencer, and George, both of whom adopted their father's profession and survive him. Spencer was born in Buffalo 49 years ago, and has always been a resident of this city. His early life was spent here except for a year or two at boarding-school. He studied law with Solomon G. Haven and with the late Hon. William Dorsheimer. When, in 1867, Maj. Dorsheimer was appointed by President Johnson United States District Attorney for the Northern District of the State of New-York, he appointed the young lawyer, Spencer Clinton, his assistant, and that office was held by him until the expiration of Mr. Dorsheimer's term in 1871. Shortly thereafter Mr. Clinton formed a law partnership with Mr. Charles D. Marshall. Later Mr. Robert P. Wilson was added to the firm, and the firm-name of Marshall, Clinton & Wilson is to-day one of the most reputable and well known in the legal directory of the city. Mr. Clinton has devoted himself assiduously to the study and practice of his profession. He is one of the most sagacious counsellors in the city, and has for many years had almost sole charge of the litigations of his firm. His knowledge of municipal affairs is extensive, and when in 1874 a bill was passed creating a board to revise the City Charter, Mr. Clinton was named as one of the commission. Again two years ago, when a popular effort was made at Charter Revision, Mr. Clinton became the head of the committee by common consent, and added much weight and influence to its deliberations. He has never held nor ever sought public office. He has always been a Democrat in politics, and in 1887 was the candidate of his party for the State Senatorship. Mr. Clinton's indifference to public honors was demonstrated by the little inter- further, and embracing a literary concepest he took in his own campaign, to which | tion, is seen in the frieze of Music Hall, his friends attribute his defeat. THE Marian Loomis, the daughter of the late

children by his first wife.

Mr. William C. Cornwell was born in Lyons, N. Y., August 19, 1851, and came to Buffalo with his parents when six years of age. He was the son of the late Francis E. Cornwell, an eminent Buffalo lawyer, who having received the nomination for Judge of the Superior Court in 1869 died on the morning of election-day while thousands of ballots were being cast for him. Had he lived it was the intention of influential friends to place him in nomination for Governor of the State of New-York.

The subject of this sketch began his bus-

iness career in the banking-office of H. N.

Smith in 1868. Afterward he acted as

messenger in the Bank of Attica, and subse-

quently as book-keeper in the Third Na-

tional Bank. When the Bank of Buffalo

WILLIAM C. CORNWELL.

was organized in 1873 he took the position of general book-keeper and correspondent. At the outset Mr. A. L. Bennett was the Cashier of the bank, but two years later his health became impaired, and until 1878 the general management of the internal affairs of the institution devolved upon the assistant Cashier, Mr. B. A. Provoost. During these five years the department of correspondence had developed rapidly, and President S. S. Jewett, with that acute discernment of character which is one of his many gifts, saw in the young correspondent the proper timber for a banker. Accordingly, in the autumn of 1877, at a meeting of the Board of Directors, Mr. Cornwell was elected Cashier to fill the vacancy. The Bank of Buffalo then had but three clerks in its employ, its clientage was limited, the total deposits were only about \$500,000, and the surplus at the end of five years' business only \$17,000. To-day, ten years later, it has a staff of 35 clerks, the customers are numbered by the hundred, the deposits range from \$3,500,000 to \$4,000,-000, and the surplus is nearly equal to the capital. This growth of over 600 per cent. The Clinton family figured conspicuously in a single decade is phenomenal and unin the early colonial history of this country heard-of in the history of banking. What and in the struggle of the Revolution. One were the underlying causes? Mr. Cornof the most distinguished members of the well had certain ideas of his own concernfamily was Gov. DeWitt Clinton, to whom ing banking methods, and as soon as the opportunity was presented these theories mercial prosperity, as it was chiefly through | were put to the test. The new way proved more popular and more profitable than the old, and it may be fairly said that Mr. Spencer Clinton, the subject of this sketch, | Cornwell's innovations have practically revolutionized the banking business of Buffalo. In all his efforts to modernize and died suddenly in Albany on September 7, adapt to the requirements of the age the methods of financiering which had come down from other days, Mr. Cornwell has enjoyed the cordial co-operation of President Jewett, whose ripe experience, coupled with the young Cashier's progressive ideas, have secured to the bank unprecedented prosperity without any departure from the safe lines of financial policy. The scene in the counting-room during banking hours is one of remarkable activity, and it has become a common remark that if one desires to meet any man of business in the city the Bank of Buffalo is the most certain place to

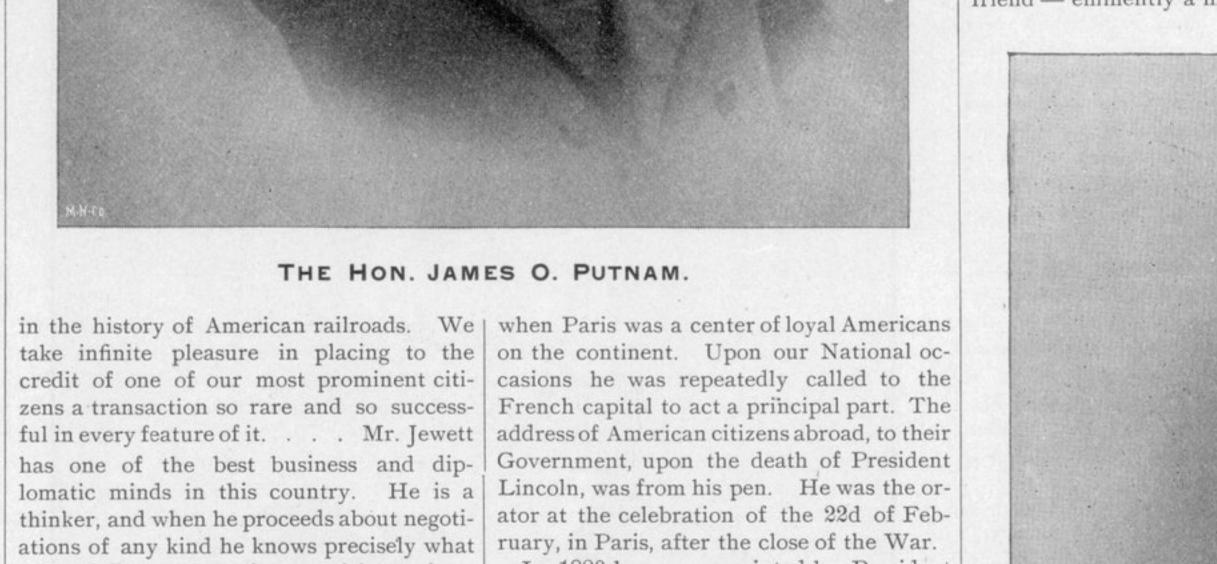

await his coming. It is a theory of Mr. Cornwell's that every hard worker should have some outside pursuit for his leisure hours as a source of diversion from the relentless hammering of business life, and in his own case the study of art has been chosen as a recreation. The exquisite and unique productions of his fertile brain are well known to Buffalonians. His "Book of the Festival" of 1884, an attractive souvenir of the great feast of song, sold by the thousands and saved the festival from a threatened deficit. The same may be said of the souvenir book of the Music Festival of 1888. In 1885 Mr. Cornwell issued a series of unique programmes for the Philharmonic Society, and a set of these coming to the hands of Mr. Andrew Tuer, the editor of the Paper and Printing Trades Journal of London, England, elicited from him a personal letter to

the artist, in which he said: "Nothing that I have met with for some time - and I am accustomed to receive fine typographical specimens from all parts of the world - has so taken my fancy. The designs are those of a skilled artist, born, I should say, with a natural genius developed by cultivation."

Mr. Cornwell originated the idea in ceiling decoration of motion by use of conventionalized cloud-work as against set geometric line-work. Two noteworthy examples are the ceilings of the Merchants' Exchange and of Music Hall. This idea carried still

quired in the district schools of his native place and of Lodi, N. Y., and supplemented by a single term at the Springville Academy. In January, 1835, Mr. Root came to Buffalc to fill an engagement as clerk and book-keeper with Isaac Skinner, a manufacturer of ploughs. This establishment a year later was destroyed by fire, and soon afterward a partnership to carry on the same business was formed by Franklin Day, Mr. Root, and Sherman S. Jewett. For over 40 years, with one short interval, Mr. Root was associated with Mr. Jewett in the foundry business, which in due course of time became almost exclusively the manufacture of stoves, and the firm-name of Jewett & Root was displayed in letters of iron in thousands of households throughout this long period. In 1878 Mr. Root sold out his interest in the stove works, and almost immediately thereafter succeeded Mr. Henry C. Jewett in the leather firm of Jewett & Keating, which then became Root & Keating. The business of this firm

is adequately described elsewhere. Possessed of large capital, Mr. Root has naturally become identified with a number of the local banks. He is a director of the Manufacturers & Traders' Bank and the Bank of Buffalo, a trustee of the Buffalo Savings Bank, and a stockholder in the Marine and Third National banks. Mr. Root is likewise a stockholder in the Citizens' Gas Company, a trustee of Forest Lawn Cemetery, a trustee of the State Normal School, and a member of all the leading literary societies and commercial

bodies of the city. A devoted believer in the Methodist Episcopal faith, the institutions of that church have been made the object of his special care. Fair prosperity rewarded the patient industry of Mr. Morse in all his ventures, and when in the year 1863 he sold out his shipchandlery a considerable fortune was at his command. During the past 25 years he has added largely to his wealth by judicious investments.

In the year 1879 he became one of the directors of the Erie County Savings Bank, and May 7, 1884, he was elected vice-president as the successor of the late John Allen. This office he still holds. During the years 1878 and '79 Mr. Morse represented the Tenth Ward in the Common Council, to the perfect satisfaction of his constituents, but since then he has steadfastly declined all political honors.

WILLIAM H. WALKER.

If one were asked to name a citizen of Buffalo whom success has not made arrogant or purse-proud, who is content with a business yielding an income adequate to his needs, who takes an honest pleasure in unostentatious works of benevolence, whose public spirit is controlled by the balance wheel of conservatism, and whose most marked trait is a warm-hearted good will toward every one who comes within the range of his acquaintance, no better example could be cited than Mr. William H. Walker, the banker and wholesale boot and shoe merchant.

Mr. Walker was born in Utica, N. Y., August 20, 1826. Six years later the family removed to Buffalo, and the elder Walker, during the remainder of his life, was one of the leading master mechanics and builders in the city. The son obtained his education at the old Buffalo Academy and at several private schools, chief among them being those conducted by Hiram Chambers and Cyrus Fay. At the age of 17 Mr. Walker began his business life, and soon afterward entered the employ of Mr. O. P. Ramsdell, then as now a prominent merchant of this city.

In the year 1852 Mr. Walker entered the law school at Albany, where he remained one year. Close application to study, however, proved injurious to his health, and in consequence he again joined Mr. Ramsdell in the wholesale boot and shoe business, and remained with him as a partner until 1876, when the firm was dissolved.

Thereafter Mr. Walker continued in the same business alone until 1887, when he associated with himself Mr. Edward C. Walker, his son, and Mr. William A. Joyce, both of whom had long been connected with the store. The business has always been successful, and at the present time the name of William H. Walker & Co. is esteemed one of the most reputable in the boot and

STEPHEN M. CLEMENT.

For thirty years or more Dr. Burwell The Marine Bank of Buffalo, organized July 8, 1850, was the second bank of discount and deposit established in this city. But only in the matter of age does it concede precedence to any other. With a capital of \$200,000 and a surplus of nearly \$350,000, with every facility to meet the proper and legitimate necessities of the business community, and with so able a financier and so respected an executive officer as Mr. Stephen M. Clement at its head, it may well claim a place in the first

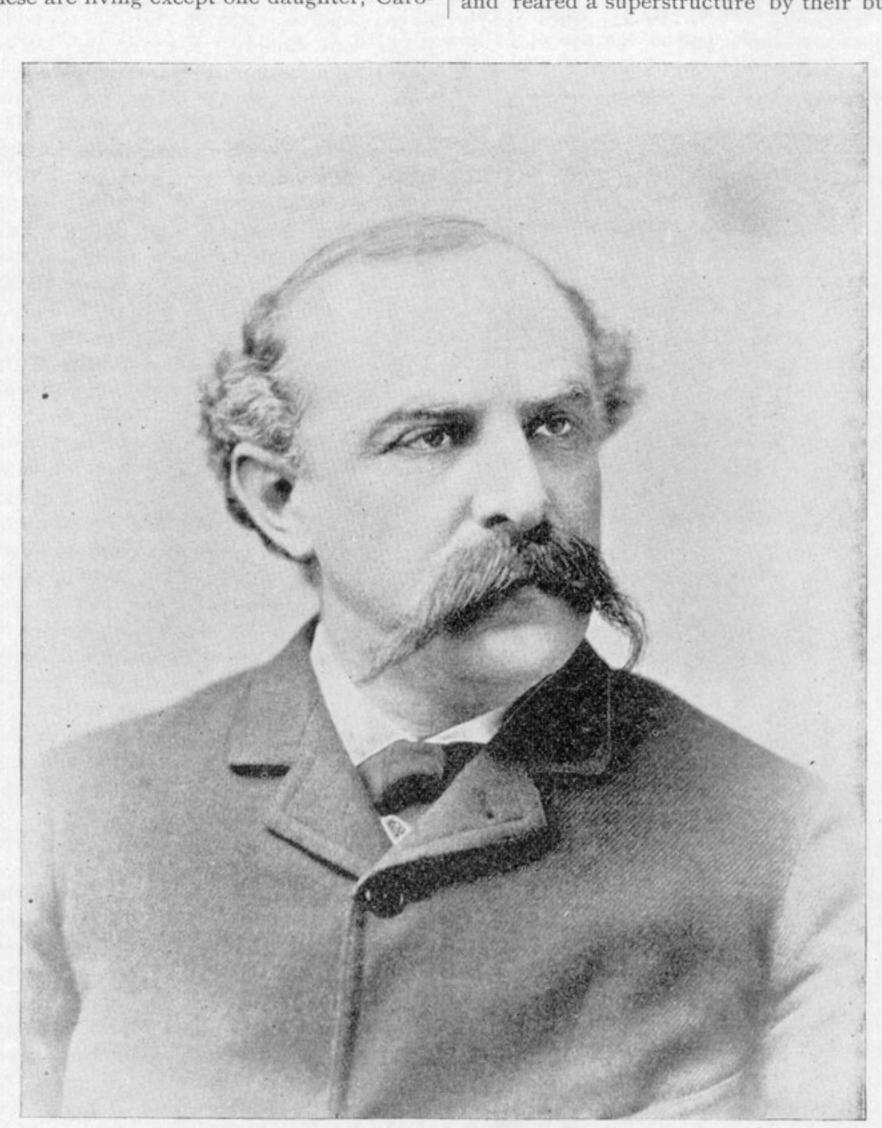

rank of the banks of this State. Stephen M. Clement was born in the town of Manlius, Onondaga County, N. Y., February 26, 1825. After obtaining a common school education he engaged in the grocery business, first as a clerk and afterwards on his own account. At the age of 30 he sold out his store and accepted the trust of cashier in H. J. Miner's bank at Fredonia. The following year he organized the Fredonia Bank and became its cashier. This bank was succeeded by the Fredonia National Bank, with Mr. Clement in the same position, until 1867, when he was elected President. This office he held without interruption until 1881. Meanwhile, in 1869 Mr. Clement had become a stockholder in the Marine Bank of Buffalo, and shortly afterward was elected its cashier. In January, 1881, he was made President, which office he has continued to hold without interruption. While from the start the business of the Marine Bank has been both creditable and highly successful, the most profitable period of its history has been the twenty years during which the hand of Mr. Clement has been potent in guiding its fortunes. Throughout this score of years the average annual profits have exceeded 23 per cent. on the capital stock.

Mr. Clement is likewise the President of the Merchants' National Bank at Dunkirk, a director in the Bank of North America of New-York, and a director in the First National Bank at Faribault, Minnesota.

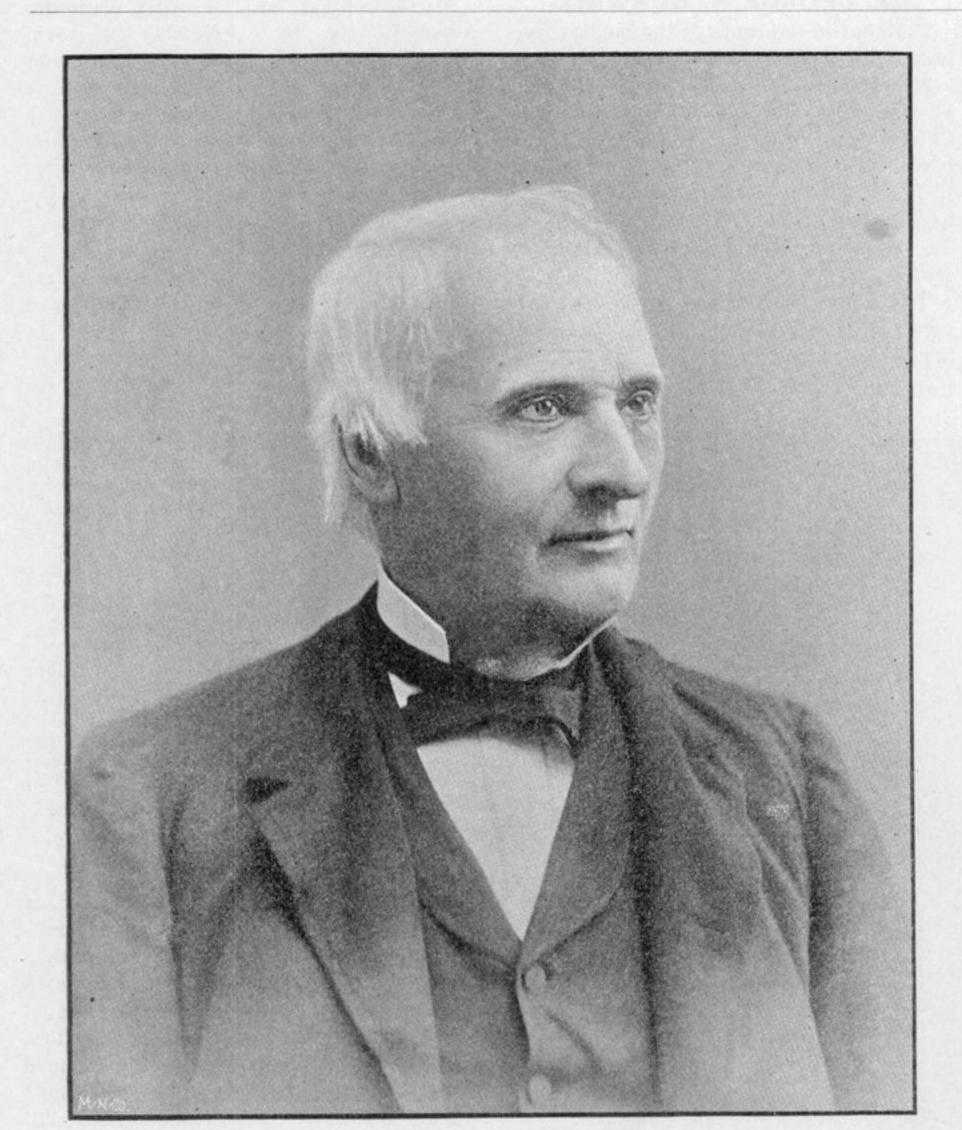

In many respects the Marine Bank is a model financial institution. An air of solidworkings of its departments. The other officers are: Jewett M. Richmond, vicepresident; S. M. Clement, Jr., cashier; Henry J. Wilkes, assistant cashier, and a board of directors consisting of the President Sherman S Jewett, Bronson C. Rumsey, John W. Bush, E. H. Hutchinson, and

Moses M. Richmond. Mr. Clement's advice and opinion in financial matters are looked upon by the business community of Buffalo as being as good, sound, and reliable as can be had from any source in the city.

He has always seemed to have, underlying his motives and acts, a deep sense of his responsibility as the custodian of the property of others. This obligation has been so weighty with him that he has never for a moment been engaged in any speculation; and the generous competence which ruptible honesty.

EMIL A. BECKER.

DANIEL C. BEARD.

DANIEL C. BEARD.

The history of the life of Mr. D. C Beard is a part of the history of Buffalo during the period of its later growth and prosperity. One of the earlier merchants of the town, his business career has been closely identified with the development of the city. He is one of the oldest residents, and has watched the expansion of the town with the keen interest of one who desires to contribute to the welfare of the community

where he has spent a successful life. Mr. Beard was born in March, 1815 His parents were residents of Washington, and his childhood and youth were passed in that city. His education was obtained in the schools of the national capital. At the age of 18 he left school and started out in the world for himself. This was some 55 years ago. He determined to go to Buffalo and there locate. There were no railroads in those days, and traveling by the means then in vogue was too expensive for the young man. Consequently the larger part at the village of Buffalo, he soon found employment with a firm of ship chandlers situated on the dock. He continued in the service of this firm and its successors until 1843, when he began business on his own account. He started in the grocery trade, and so continued uninterruptedly until 1867, when he retired. He is the father of three children, two sons and a daughter, all of whom are now living. In 1887 Mr. and

During the Mayoralty of Grover Cleveland Mr. Beard was appointed chairman of the Board of Sewer Commissioners, and discharged that function for four years, this time that Mr. Tillinghast made his home during which period he devoted the larger part of his time to the public service gratuitously. In politics he has been a strict Republican since the formation of that party. In 1866 he was elected alderman from the Tenth Ward, but after serving one term declined re-election.

Mrs. Beard celebrated their golden wed-

Mr. Beard for many years has been a member of the Washington-street Baptist Church and a liberal contributor to the support of the church organization. He has been prominent in a number of business enterprises which have materially accelerated the growth of the city, and he bears the reputation of being one of the most publicspirited of our citizens. At present he is President of the National Savings Bank, and is connected with several other business organizations.

JAMES TILLINGHAST.

James Tillinghast, assistant president of the New-York Central & Hudson River Railroad and former president of the Wagner Sleeping-car Company, was born in Cooperstown, N. Y., May 8, 1822. He is the son of Gideon Tillinghast, the builder of the first cotton factory using power-looms in the State of New-York, and grandson of Elder the first Baptist Church in America.

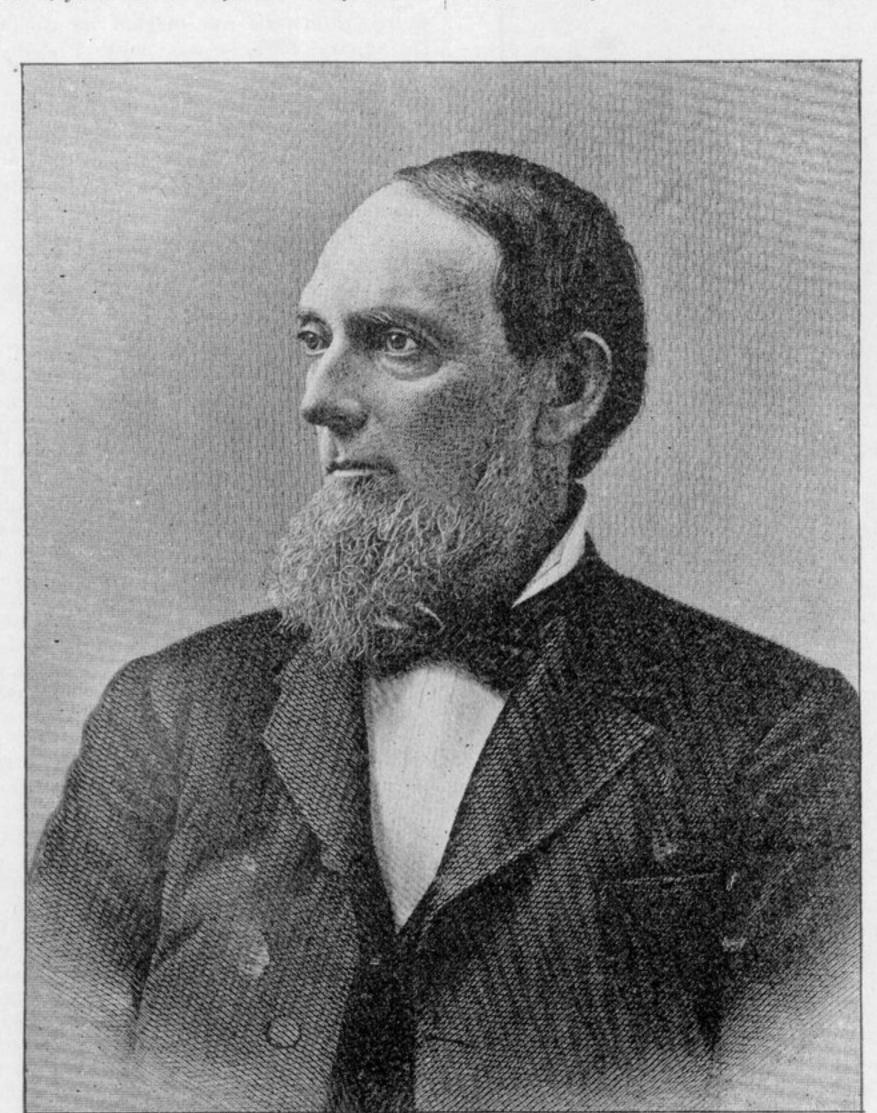

James Tillinghast was the elder son of a family of three children, and inherited much of hie father's bent for mechanics. In his boyhood he developed a fondness for machinery and acquired some skill with tools. At 15 years of age he entered a country store. A year later he became clerk and book-keeper for the firm of Bell & Kirby at Dexter, Jefferson County, at a salary of \$8 a 1843, to Mary Williams of Limerick, N. Y.,

month. Later, when a new partner was added to the firm, the care of the books of a land company was entrusted to him. His duties were still further increased the same year by the firm's becoming owners of a line of steamboats running between Dexter and Oswego. In 1840 young Tillinghast had the management of the Brownsville Cotton Manufacturing Company's store and office affairs. In 1841 he became one of the proprietors of a country store in Brownsville. Two years later he sold out and embarked in the lake trade. His first trip was as supercargo of the sailing vessel H. H. Sizer from Pillow's Point to Chicago. Returning, he brought the second cargo of grain shipped from Chicago to Buffalo, which sold so as to net about 48 cents a bushel for freight. In 1846 Mr. Tillinghast associated with his father in establishing a foundry and machine shop at Little Falls. In 1851 he determined to engage in railroading, and began life on same year he assisted in building the Rome spring of 1856 Mr. Tillinghast accepted the in all courts where he has practised. appointment of Superintendent of Motive Power on the Northern Railway of Canada, where he was again brought into contact with lake traffic, and for the second time became interested in marine transportation. In necting with the Grand Trunk Railway and the Buffalo & Lake Huron road. It was at in Buffalo, where he has since lived except when absent on his official duties. His rise was rapid after that. In 1864

tendent of Motive Power on the Michigan Southern Railway. In July of the same year he took the place of assistant to the General Superintendent of the Buffalo & Erie road. In February, 1865, he accepted the position offered him by President Dean Richmond as Superintendent of the Western Division of the New-York Central. In 1867. his talent and efficiency commended him to the late Commodore Vanderbilt, who had just acquired a large interest in the road when the Commodore gained a controlling interest he made Mr. Tillinghast General Superintendent, with headquarters at Albany. Many improvements on the road were the result of Mr. Tillinghast's suggestions, not the least important being the laying of four parallel tracks. In 1878 and 1879 he also filled the positions of President and General Manager of the Canada Southern Railway. In 1881 he resigned as General Superintendent of the Central and was appointed by Wm. H. Vanderbilt as assistant to the President of the road, the position he now holds. From 1882 to 1884 Mr. Tillinghast acted as vicepresident of the Wagner Sleeping-car Com-Pardon Tillinghast, builder and founder of pany, and in 1884, upon the death of the President, he filled that office. In 1883 he acted as vice-president of the Niagara River Bridge Company and superintended the building of the new cantilever bridge. Mr. Tillinghast has a wonderful capacity for work, yet his methods are so systematic and rational that however great the pressure the end is accomplished without friction.

Mr. Tillinghast became temporarily Superin-

Dr. Bodo Otto, Sr., the great grandfather of the subject of this sketch, was a distinguished German physician who immigrated to this country in 1752, and settled in Philadelphia, ranking among the leading professional

At the outbreak of the Revolutionary War, although then far advanced in years and on the verge of retirement, he entered the service of his country and was Surgeon in charge of the Hospital at Valley Forge during the memorable winter of 1788, declining all compensation for these valuable services.

His son, Bodo Otto, Jr., adopting his father's profession, was the grandfather of the John Otto whom Buffalonians know. After receiving his degree of Doctor of Medicine in the University of Pennsylvania, he settled in Gloucester County, New-Jersey. On the questions relating to the liberties and independence of America he was earnest, emphatic, and outspoken. He was a warm supporter of the measures of the Provincial Congress which met at Trenton, May 23, 1775, and afterwards at Burlington and New Brunswick. By that body he was appointed July 24, 1776, Surgeon of the battalion under

Mr. Tanner lived at Springville from about 1840 to 1848, when he removed to Buffalo, where he has ever since resided, practicing his profession. He has given special attention for many years to the searching, examination, and passing of titles, ranking high as a real-estate lawyer. During his long residence in this city Mr. Tanner has been fairly enterprising, sustaining an excellent reputation as a good citizen, and through his strict business habits and qualifications he has been fairly successful in accumulating wealth, and has been honored frequently by positions of trust. He has held the offices of alderman, president of the Common Council, city comptroller, police justice, and United States assessor for the 30th district of New-York.

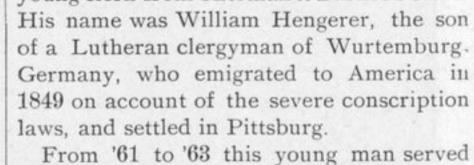

Mr. Tanner has been twice married, his first wife Orrelle A. Brown, to whom he was united on September 1, 1844, died in 1852, leaving him two daughters, now Mrs. Ella P. Hines and Imogene O. Brown, both of New-York City. In 1853 Mr. Tanner married Sarah F. Fisher, by whom he has had five children, Mary F., Wells B., Merle A., Morris F., and Edward E. Tanner. The daughter and Wells B. are now dead. Merle A. and Morris F. Tanner are associated with their father in the real-estate business.

GIBSON T. WILLIAMS.

At this time Mr. Williams was the President of the Clinton Bank. At the outbreak of the War, however, the stockholders deeming the financial situation somewhat dubious, it was resolved to wind up the business, which was done, every stockholder and depositor receiving payment in full. In 1862 the Western Insurance Company was incorporated, with Dean Richmond as President and Mr. Williams as vice-president. Upon the death of Mr. Richmond Mr. Williams became the executive head. The business of the company was immense, but the Chicago fire swept it out of existence.

In 1854 the Erie County Savings Bank was started, and Mr. Williams was one of the corporators and the first vice-president. Later on he was chosen President, and has remained the executive head ever since. It is a source of honest pride to him that this financial institution, in which he has been a controlling spirit from the first, has now 33,000 depositors, assets exceeding \$14,000,

THOMAS THORNTON.

Mr. Thornton, the head of the veteran firm of Thornton & Chester, millers, was born in London, Eng., in 1812, and in 1833 came from New-York to Buffalo, where he has ever since resided.

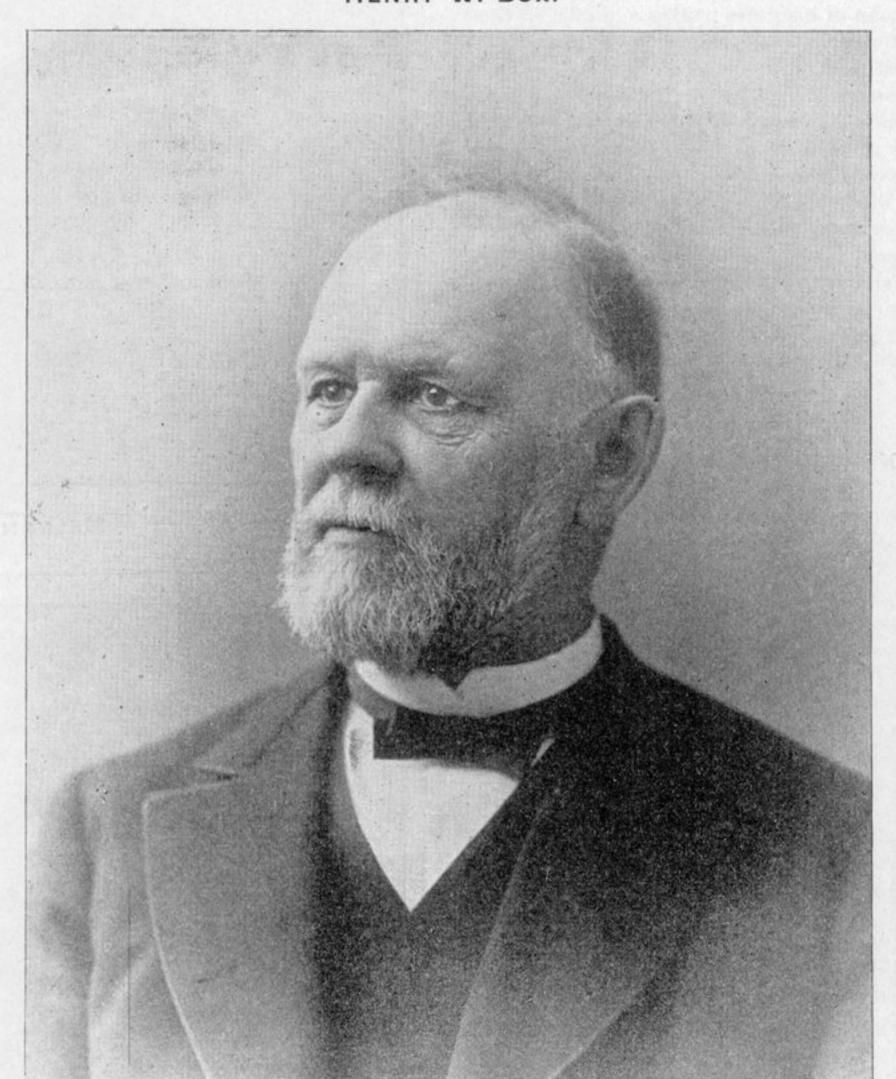

He was for several years engaged in the grain and produce business, in connection with the extensive commission-house of Dows & Cary, New-York, but in 1845 formed the copartnership of Thornton & Chester, and bought the Globe flouring mills at Black Rock. For several years following the firm operated not only the Globe mills, but also the Frontier, the North Buffalo, and the National mills in this city and the Spalding mills at Lockport. The firm built the National mill in 1868, and in 1882 enlarged it to its present capacity of 1,000 barrels of flour a day. The great success attained by the firm is due largely to the business sagacity and

duced to come to Buffalo to enter the employ Hutchinson established the advertising of John D. Shepard & Co., who that year agency which, together with the printing erected a large foundry and engine-works on business that was an outgrowth thereof, has Ohio Street. With this firm he remained received the major portion of his attention until it passed out of existence. AUGUSTUS F. TRIPP.

able and honorable conduct of its affairs by Mr. Thornton.

He is a gentleman of quiet and dignified demeanor, whose modesty makes him always prefer to listen rather than be listened to. He has always been public-spirited, and ready to identify himself with measures which seemed to him to be for the city's good. He has been prominently connected with many public associations of various kinds. He is at present the honored president of one of our great financial institutions, the Bank of Commerce.

Mr. Thornton, though well on in years, is hale and hearty, and bids fair to enjoy this community.

AUGUSTUS F. TRIPP.

The most useful members of the community are not always those who make the most noise, and the man who freely gives his unostentatious check to promote some worthy object is as deserving of public esteem as the orator who presents the claims of that object from the platform. Among the quiet workers of this city few enjoy greater honor in the circles where they are best known than Mr. Augustus F. Tripp, the senior member of the long-established firm of Sidney Shepard

mont, September 30, 1822. His father was a farmer, and the son remained in the old homestead where he was born until he reached the age of 21, receiving such educational advantages as the common schools of the rural districts offered in those days.

On the 30th day of April, 1844, he left New Haven and went forth from amid the rugged hills of his native State to seek his fortune in the then opening and more promising Western country. Embarking on a canal packet-boat at Vergennes, Vermont, until the autumn of 1847, when he was in- the dissolution of this firm in 1875 Mr. ing apartments at The Niagara.

credit for this growth, and says that it is the natural outcome of the co-operative work of the several partners in the firm, with that of the employees in the several departments. Mr. Tripp is the President of the Buffalo Musical Association, and in that capacity has rendered valuable services to the music-loving people of this city. He is likewise identified with nearly all the other organizations whose purpose it is to promote municipal prosperity and general culture.

EDWARD S. DANN.

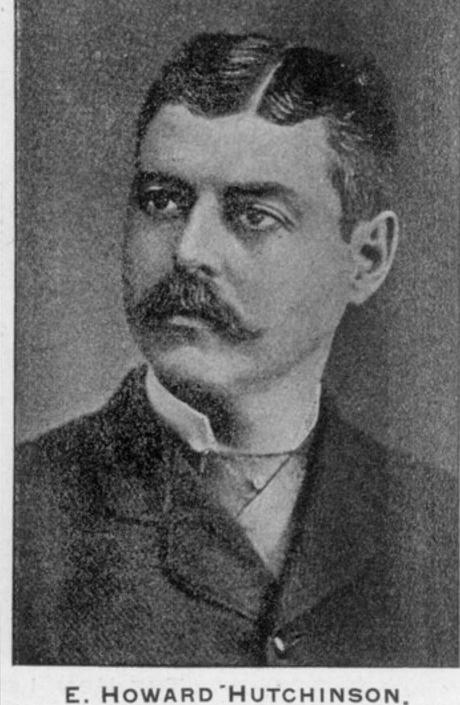

Mr. Edward S. Dann, the secretary and treasurer of the National Savings Bank, has been long and favorably known to the tion he had eked out a bare existence by for many years to come the universal re- people of this city in more than one capac- teaching school, and by manual labor. spect and esteem in which he is held in ity. He was born in Little Falls, N. Y., in 1834, and in 1854 came to Buffalo with his back to 1861, when he entered the city with father, the late J. C. Dann, with whom he \$8 in his pocket and the determination to was associated in the banking business for | become a member of the New-York State many years. Later on Mr. E. S. Dann bar in his head. Webster, and became a partner in the oil-refining Mr. Tripp was born in New Haven, Ver- business of George C. Webster & Co. Upon the organization of the National Savings Bank he was elected secretary and treasurer, which position he has continued to hold to the present day.

For many years Mr. Dann has been prominent in the offices of the Episcopal church. He is a warden of the church of the Ascension, treasurer of the Church Home, and a member of the Standing Committee of the Diocese of Western New-York.

E. HOWARD HUTCHINSON.

One of the noteworthy features of Bufwith about 70 other passengers bound for the falo is the prominence of its young men in West, he journeyed via Lake Champlain and business and municipal affairs. Among the Northern and Erie canals through to those who have been active factors in the

Mr. Hutchinson is a large taxpayer, owning real estate in many sections of the city. Last year he erected on Main Street, above Virginia, the large and imposing "Hutchinson Block" of flats and stores. He is now building on West Eagle Street, opposite the City and County Hall, a five-story office structure, the first floor and basement of which will be occupied by his printing office next year.

Mr. Hutchinson is connected with a number of societies and public institutions. He is a Mason, and member of Ancient Landmarks Lodge, Asylum Chapter, Keystone Council, and Hugh de Payens Commandery; also of Orient Lodge, A. O. U. W. He is also a life member of the Buffalo Library, the Buffalo Historical Society, the Buffalo Orphan Asylum, and the Mechanics' Institute, and besides is an annual contributor to a number of worthy benevolent institutions. He is a stockholder in the Manufacturers' and Traders' Bank, the Bank of Buffalo, and the Marine Bank, and is a director of the last-named.

Numerous and varied as are these interests, he is able by a systematic method of attending to business to give due attention to each

HENRY W. BOX.

Among the citizens of Buffalo who are distinguished for their public spirit one of the most conspicuous is Mr. Henry W. Box. Prominent as a lawyer, gifted with rare persuasive powers, a master of diplomacy, a princely entertainer, and the possessor of an ample fortune, he stands forth clearly as a type of those self-made men who have made their way from obscurity to distinction by their own efforts.

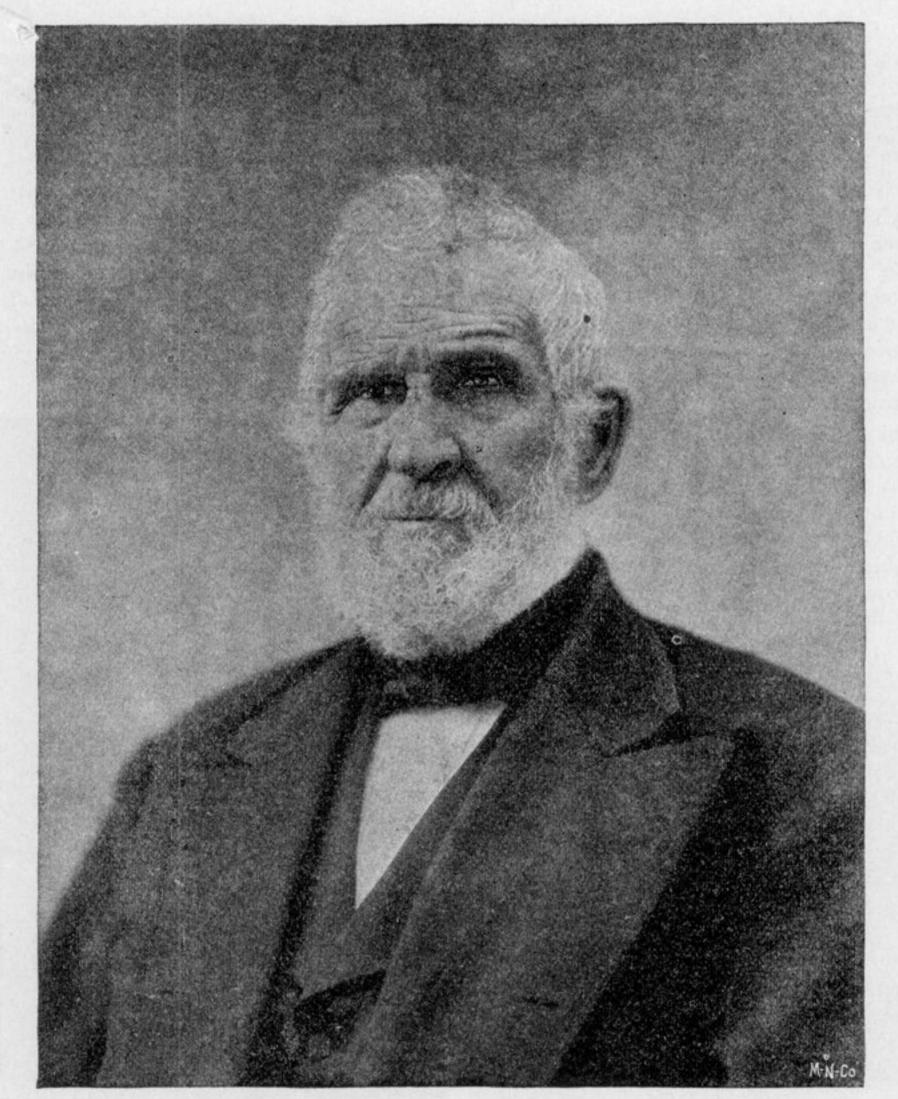

Mr. Box was born in Cornwall, England, April 23, 1836. Eight years later his father died, leaving a widow and seven small children well nigh helpless. When the subject of this sketch was 15 years of age he crossed thd ocean to this country, hoping to find on American soil opportunities to rise above the misfortunes of birth which were denied him under the British flag. Having only a slender purse and wholly unaccustomed to the ways of the city, the homeless boy pushed forward into Pennsylvania in search of work. At Honesdale a place as a farmhand at \$6 per month was offered him and gladly accepted. Three years later he began to attend a district school at Bethany, Penn., his first educational opportunity, and although as a rule a mind undisciplined to study for eighteen years does not adapt itself readily to new conditions, the thirst for knowledge which took possession of Mr. Box was rewarded by his rapid advancement. Encouraged by the success achieved, the ambitious boy pushed forward into the Seminary at Bethany, where he mastered the higher branches with surprising facility. Within twenty months from the day he entered the district school he passed successfully an examination for a teacher's certificate. Meanwhile his means of subsistence were derived from janitor work ard all sorts of odd jobs. He next entered Wyoming Seminary, at Kingston, Penn., where he remained until graduation.

Mr. Box began his legal studies under Judge Collins at Wilkes-Barre, Penn., and was admitted to practice in that State in 1859. During all these years of prepara-

The Buffalo career of Mr. Box dates mattress on the office floor. Finally, Febquarters at Toledo, where he remained one ruary 2, 1862, he was admitted to practice in this State, and thenceforward the story of his life is a narrative of successes, each more brilliant than the preceding. Disciplined by difficulties, and not appalled by the magnitude of any undertaking, the young attorney brought to his professional practice an indomitable will and a tenacity of purpose which admitted no impossibility and feared no defeat. For two years he practiced alone, with ever increasing success, and then entered into partnership with Mr. William H. Gurney. Since that time he has been successively a member of the firms of Box & Perkins. Box & Norton. Box, Hatch & Norton, and Box, Norton & Bushnell. As a corporation attorney the success of Mr. Box has been remarkable. and so valuable are his services esteemed that he is permanently retained by the Buffalo and East Side street-railroad companies, the Western Union Telegraph Company, the Bell Telephone Company, and

the Union Fire Insurance Company Of late, however, Mr. Box has sought relief from the drudgery of a general law practice, remunerative as it is, and has devoted the major portion of his time to the extensive real-estate possessions which have come into his hands during the past five years. Much of his suburban property has been sub-divided and sold off in city lots on easy terms, to the great advantage of the buyers, while recently he has built 150 moderate-priced houses for workingmen's

Mr. Box was married in 1865 to Miss Mary Mason Peabody, a New England lady, and one daughter has been born to

THE HON. LEWIS F. ALLEN.

LEWIS F. ALLEN.

There is no man in Buffalo about whom more might be told, that is worth the telling, than about the Hon. Lewis Falley Allen; and there is no man anywhere who cares less for being paraded in public than he. In his bluff way he always pooh-poohs the idea that people are interested in him. Notoriety is distasteful to him. Like Whittier, he is a "lover of peace and quiet." He loves, too, this Buffalo, where he has lived for over 60 years, where he has done so much in many ways, and where, as the friends and associates of his youth have passed away, a later generation is proud to claim acquaintance and friendship with him. He is one of the few surviving representative business-men of Buffalo's early days; and though now older than most men, he has kept up with the times more than other citizen of his generation. In his 89th year he still looks after his various business interests, and has put the indifferent youngsters to shame by organizing a veterans' campaign club for Harrison and Morton!

Mr. Allen is just as old as the century. He was born in Westfield, Mass., of a parentage partially French Huguenot, on the 1st of January, 1800. In December, 1812, he left the academy at Westfield, went to the city of New-York, and began business life as an apprentice in a wholesale drygoods house. The next year he went to help his father, who was manufacturing woolen goods in Connecticut; and early in 1818 started west. Three years and a half were spent in the employ of an uncle near Sandusky, O.; then he returned east, and the year 1826 found him, with his father and brothers, engaged in mercantile opera- No man can win honorable distinction tions in New-York.

daughter of William Cleveland of Norwich, upon the city where he makes his home. Conn. She was of the same family as Gen. Probably no man in Buffalo has done more Moses Cleveland, for whom the city of to carry the name of the Queen City of the Cleveland, O., is named, and became the Lakes around the world than Mr. F. S. aunt of Grover Cleveland, now President Pease, the expert dealer in lubricating oils. of the United States. Of the six children Mr. Pease was born in Rochester, Deborn to Mr. and Mrs. Allen, two are now cember 22, 1822, and first came to Buffalo living, William C. and Margaret Gertrude. when 15 years of age. His stay, however, Mrs. Allen died at the family home in this was brief, and was followed by a decade city in 1880. She was a noble, benevolent, spent in the study of the chemical propermuch-beloved woman.

and found employment as secretary and concerning the business. financial manager of the Western Insurance Company. This pioneer company dying three years later, he enlisted the co-operation of a few leading citizens and organized the Buffalo Fire and Marine Insurance Company, with a capital of \$100,000, and was its secretary until 1833. In 1831 he had been appointed financial agent of the New-York Life Insurance and Trust Company, and in that capacity made loans of about \$200,000 on improved farms in Erie, Cattaraugus, and Chautauqua Counties. These were the first loans ever obtained on Buffalo property outside of the city.

The present sketch can only briefly summarize Mr. Allen's business operations. In 1833, associated with a few men of Boston, he bought 16,000 acres on Grand Island (the entire island except about 1,700 acres) for about \$6 an acre. Some years later he reserved for himself 800 acres at the head of the island, now worth probably \$200 or more per acre. Although some sales have lately been made, he still reserves a large and beautiful farm named Allenton, which he visits two or three times a week during the summer. He has well been called "the Patroon of Grand Island," for he not only owned it, but has developed it, and been a part of its history from the romantic days of Clarke, "the outlaw king," who was a squatter sovereign of that fair demesne, to the present, when Grand Island is a rich farm tract, and becoming yearly a great summer resort for Buffalo. The happy names of Sheenwater, Falconwood, River Lea, and other familiar designations of Island resorts, are of Mr. Allen's devising.

From first to last Mr. Allen has dealt extensively in Buffalo real-estate. Many tracts, now thickly built, were bought by he prepared special reports and samples for him in the early years. In 1836 he bought the substantial stone house which had been built at a cost of \$16,000, in 1816-17, by General Peter B. Porter. This wellpreserved house, the oldest and most famous in Buffalo, stands in ample grounds preserved in oil. He is likewise an invenon Niagara Street below Ferry, and has been Mr. Allen's home for over 50 years. Famous men have been entertained there. Gen. Lafayette, John mowers and reapers, a compound repeating Quincy Adams, and many other prominent and printing telegraph instrument, and an men were received there as guests of Gen. appliance for the testing of oil by electricity. He has also It is every Buffalo-man's duty to help

books on the improvement of cattle, farm

management, and like topics. As an arboriculturist Mr. Allen has done work for which Buffalo will ever bless him. It is largely due to his efforts, and to the interest which his zeal aroused in others, that Buffalo is so well provided with shade and ornamental trees. Allen Street was named for him.

In politics, Mr. Allen was originally a Whig, and he has been a pronounced Republican from the foundation of the party. He was chairman of the first Republican Convention in Erie County. He was elected to the State Legislature in 1838, and took an active interest in the enlargement of the Erie Canal.

He was one of the originators of the Buffalo Historical Society; a founder of the Buffalo City Cemetery Association; and has ever been an active promoter of various public and private interests. He remains wonderfully active and strong for a man of his years; takes a public-spirited interest in local and state affairs; keeps well-read on the news of the day, and is a frequent writer for the Buffalo newspapers, which are always glad to be favored with his reminiscences and picturesque descriptions of events long past.

There is no pleasanter place in Buffalo than the wide verandas of his spacious old home, where he loves to sit, with friends, at sunset-time, and overlook the fair prospect of river and lake and distant shore. May he long enjoy the peaceful years of a green old age.

F. S. PEASE.

for himself and a world-wide fame for his In 1825 he married Margaret Cleveland, products without reflecting some honor ties of oils in eastern cities, where he thor-In April, 1827, Mr. Allen came to Bffalo oughly mastered all that was then known

In the year 1848 he returned to Buffalo and established the nucleus of his present oil warehouse on lower Main Street. Of all the concerns in business on that section of the street 40 years ago, this is the only one in which there has been no change in proprietorship. The business has grown apace, addition after addition has been made to the original store, until now the salesrooms and accessories extend from street to street, and occupy all the floors above.

- It may be fairly said that the lubricating oils manufactured by Mr. Pease have won golden honors the world around. Grand prize medals were captured at the London Exposition in 1862, at Paris in 1867, at Vienna in 1873, at Santiago in 1875, at the Centennial in 1876, at Paris in 1878, at Sydney, Australia, in 1879, at Melbourne, Australia, in 1880, and six medals at the National Exposition of Railroad Appliances in Chicago in 1883. These, together with minor trophies, fill a large frame.

All the machinery of the great Centennial Exposition at Philadelphia in 1876, including nearly three miles of shafting and 20,000 bearings and journals of every kind, were run during the six months of the Exposition with Pease's Improved Oils without a single failure or warm bearing. This is probably the most severe and extended

practical test of lubricating oils ever made.

Mr. Pease was regarded at the Centennial as the great authority upon all matters pertaining to the production and manufacture of oils in this country; consequently his knowledge and information was in active demand from the leading colleges and foreign commissions represented there. In compliance with requests from these sources, England, France, Germany, Russia, Austria, Belgium, Italy, Japan, and other foreign countries, which gave him a high reputation in the scientific circles of Europe.

But Mr. Pease's genius is not altogether

tor, an artist, and a musician. Among his inventions are a raking platform for harvesting machines, cast-iron movable teeth for was one of the first to make a daguerreotype. ment for the guitar, and some years ago As stock-breeder and tree-grower Mr. built a pipe-organ complete without aid. NELSON HOLLAND.

In the city of his home the name of Nelson Holland stands as a synonym for the highest personal integrity, unquestioned financial tion, and an honorable business career, crowned with a success more brilliant than

falls to the lot of most men. Mr. Holland claims a New-England birth and ancestry, the founder of the family having come over from England in 1630. He was born in Belchertown, Massachusetts, in 1829, but the term of his residence in the Old Bay State was of short duration. When he was seven years of age the family removed to Niagara Falls and thence, one year later, to Springville, in this county. The subject of this sketch worked on a farm and attended first the district school for three or four months each winter, and afterward the historic Springville Academy until he had attained his majority. The winter of 1850-1 he spent with his uncle, Selim Sears, in this city, and the following spring entered the passes his brief intervals of leisure. employ of Oliver Bugbee, a prominent lumberdealer of that day. late Nelson W. Blocher, was born of this union. It was the expectation and desire of the father that this son should succeed him in the business, and accordingly, after the youngman had received all the educational advantages which the schools could afford, in 1868 he was admitted to partnership, and the firmname Blocher & Son adopted. This relation continued with ever increasing prosperity until 1884, when in the very prime of his manhood Nelson W. Blocher was called untimely from the scenes of earth. In the distraction of his grief the bereaved father sought for some occupation to divert his thoughts from the deep affliction, and thus naturally took the form of a desire to erect a memorial to his son which should be a worthy monument, and in some measure expressive of the tender paternal relations which even death could not change. From this wish grew the magnificent Blocher mausoleum at Forest Lawn, every line and feature of which is the product of Mr. Blocher's own mind, cut in enduring granite. In all its details this mausoleum is a wide departure from the set lines of modern monumental sculpture, and as a work of art, whose distinctive features are an independence of * precedent and a departure from the established order founded on the art remains of the past, it is one of the most noteworthy monuments in the world.

DAVID S. BENNETT.

For a quarter of a century past few citizens of Buffalo have been more prominent in its commercial and political life than David S. Bennett. Born and raised on a farm in Onondaga County, N. Y., afterwards engaged in business with his brother at Syracuse and in the city of New-York, Mr. Bennett came to Buffalo in 1853 and established himself in the produce trade. A few years later he bought the Dart Elevator, which is believed to have been the origininal of all grain-elevating warehouses of the American type, now so common. In 1866 the Dart Elevator gave place to the Bennett Elevator, erected on the same site at a cost of nearly half a million dollars. The Bennett Elevator is now, in turn, being enlarged and improved, and Mr. Bennett is agitating still greater projects of development in the same direction. His ideas of the future of Buffalo, especially in its connection with the grain trade of the West and Northwest, have always been exceptionally broad and bold. He has never ceased to maintain that this port, by reason of its geographical situation and its climate, ought to be the great magazinethe common storage-place-of the American grain trade, and that it will become so just as fast and as far as the facilities for storing and handling grain are provided here. He has been strenuous, therefore, in urging and encouraging the investment of capital in new and increased elevator accommodations at Buffalo, and has done so as much by his example as by his advice. In his judgment, which events are vindicating, the owners of storage elevators in this city. instead of fearing competition among themselves, should welcome every addition to their working force, and might double or quadruple their storage capacity at this very time with much profit to themselves and gain to the country.

In 1865 Mr. Bennett was elected to the State Senate, and in 1868 he became the Representative of this District in Congress. In both legislative positions he gave his attention particularly to the commercial interests which he represented, and the New-York canals were the especial objects of his care. The original policy of the fathers of the Erie Canal, Clinton, Morris, and Fulton, who urged their enterprise at general Government, impressed Mr. Bennett priating \$8,000,000 for the enlargement of commerce. In the Committee on Commerce and the Committee on Appropriations, to which the bill was successively of favor to it and of willingness to report it, provided the State of New-York would by resolution of its Legislature pledge the acceptance of the appropriation and the application of it as contemplated. The required action of the New-York Legislature was not secured at that time, but Mr. Bennett's national canal policy has steadily gained adherents, and an enlarged canalcome one of his monuments.

In this policy, as well as in the project of a Niagara River Tunnel, and in the plan of a Crosstown-Railway, providing common tracks through the city for all roads on equal terms, Mr. Bennett has been, perhaps, in advance of his time, and the future may have vindications in store for him.

WILSON SHANNON BISSELL.

One of the most prominent men of the Buffalo Bar, and of the country - made so in spite of himself, for no man has less liking for notoriety — is Mr. Wilson S. Bissell. He is not a "brilliant" advocate, not a stumpspeaker, not a man for show in any sense or who seeks the public eye in any way, but while still a very young man he became noted for the soundness of his judgment, the solidity of his learning, the perfect trustworthiness of his character, and the mental as well as moral honesty of his make-up. He is specially a consulting lawyer, and is a safe adviser not only in legal and business questions, but in matters of public spirit and the general weal and political policy and public affairs generally. There is to-day no man in this city of any age whose counsel is more sought, or when obtained has more

Mr. Bissell was born at New London, Oneida County, N. Y., December 31, 1847. He came to Buffalo with his parents in 1852, and has ever since made this his home. After attending the graded and high schools of this city, he entered, in 1863, the Hopkins Grammar School at New Haven to prepare for Yale College, from which venerable seat of learning he graduated with honors in 1869. He then began the study of the law in the office of Laning, Cleveland & Folsom (A. P. Laning deceased, Grover Cleveland, Oscar Folsom deceased, father of Mrs. Cleveland.) Mr. Bissell was admitted to the bar in September, 1871. In September, 1872, he formed a co-partnership with the Hon. Lyman K. Bass. In 1874 Mr. Cleveland joined the firm. In 1876 Mr. Bass retired, and the firm of Cleveland & Bissell began a successful career, which lasted till Mr. Cleveland's election as Mayor in 1881, when Mr. George J. Sicard was admitted. Cleveland, Bissell & Sicard lasted till Mr. Cleveland's election as Governor, when he retired and Mr. Charles W. Goodyear was admitted and the style changed to Bissell, Sicard & Goodyear. Last year Mr. Goodyear concluded to leave | dent Cleveland. He has steadfastly refused professional for business life, and a new firm to accept the official rewards which the Presiwas formed by the admission of ex-Judge Frank Brundage and Mr. Herbert P. Bissell, and the title of Bissell, Sicard, Brundage & ter would have adorned. It has been re-

Bissell was adopted. The distinctive character of Mr. Bissell's and fame which his friend has gained, to practice has been that of counsel for corporations. Railroad corporations have more particularly secured his services, and at the present time he is president of two railroad companies and a director in several others. The railroads of which he is the official head are the Buffalo & Southwestern and the

Buffalo & Geneva. Mr. Bissell is a public-spirited ctizen, whose support is always accorded to worthy enterprises. He has taken an active interest in the Buffalo Library, and has served it for a number of years as president, trustee, and real-estate commissioner. At the present time he is president of the Buffalo Club, the representative social organization in the city. and one in which he has always taken a deep interest.

Mr. Bissell has taken an active part in politics, although he has never been willing to accept office. He has always been an earnest Democrat, and has faithfully followed out the traditions of his party. He has long been a valued counsellor in party affairs and he bore a prominent part in the conventions which nominated Mr. Cleveland for Governor in 1882, and for President in 1884. He of the firm of Tabor, Sheehan & Coatswas a delegate to the State Convention held | worth, was born June 28, 1841. GEORGE CLINTON.

George Clinton is the youngest son of Judge George W. Clinton and grandson of DeWitt Clinton, both of whom have been prominent in the history of New York State. The sudden death of Judge Clinton at Albany about three years ago occurred on the birthday anniversary of his son George, who was born in Buffalo, September 7, 1846. The mother is still living in Albany at an advanced age. George Clinton was the youngest of four sons, but two of whom survive.

The early life of George Clinton was passed, and his education was obtained, in this city. After being graduated from the Buffalo High School he went to New-York, and there entered the law school of Columbia College. He was graduated with high honors, brother-in-law, Henry L. Clinton, but early fession for about five years. In 1872 he married Alice Thornton, daughter of the late T. F. Thornton of Buffalo, taking his wife West with him. In 1873 Mr. Clinton returned to Buffalo, and has since been one of her most useful citizens. Mr. Clinton first formed a law partnership with Thaddeus C. Davis, which continued several years, under the firm name of Davis & Clinton. In 1882 a partnership was entered into with Mr. Martin Clark, and later Mr. John W. Ingram was admitted.

Mr. Clinton is a close student of men and affairs, and enjoys the confidence, respect, and esteem of all his associates. He has several times been singled out for honorable office, and whatever position he has accepted he has filled ably and conscientiously. Mr. Clinton is a staunch Republican, and served good in that office. Always a firm friend of the canal, and is to-day the president of the Canal Union, a position to which he was first elected two years ago. While in the Legislature Mr. Clinton further distinguished himdirection were recognized by the local association in the presentation to him of a memorial. Mr. Clinton is now a member of the Board of Sewer Commissioners, to which office he was appointed in 1886. He is also

CHARLES F. TABOR.

THE HON. WM. F. SHEEHAN.

WILLIAM F. SHEEHAN.

The leadership of the Democratic party in the last decade has devolved almost entirely upon young men. Among the representative young men of the party who are now prominent in its councils, there is none better known or more generally quoted than the Hon. William F. Sheehan. Mr. Sheehan is a native of Buffalo, and was born on the 6th of November, 1859. He therefore is but 29 years of age. He received his education at the public schools of the city and at St. Joseph's College. He began the study of the law in the office of Charles F. Tabor in 1876 and was admitted to practice at the January General Term in 1881. Mr. Sheehan's interest in politics had always been a lively one, and before he had obtained his majority he was an active worker for the success of the Democratic ticket. In 1882 he formed a law partnership with the Hon. Charles F. Tabor, now Attorney General, which continues at the present time. For three ensuing years Mr. Sheehan devoted himself to the practice of his profession and gained the reputation of being one of the brightest of the younger members of the Erie County bar.

During this period, too, he had not been unmindful of politics, and in the autumn of 1885 he was nominated for the Assembly by the Democrats of the First District and was elected by a handsome majority. Mr. Sheehan's first year in the Assembly was unmarked by any incidents of a striking nature, but his action in the councils of his party betokened that he was prepared to take vigorous and agressive measures in support of his principles whenever the time should arrive. In 1886 he was re-elected to the Assembly, and at the caucus of the Democratic members preceding the organization of the Legislature was nominated for the Speakership. This was an honor never before accorded to so young a man, but the history of the past three years in New-York State politics fully justifies the wisdom of the party in selecting him as its leader in the Legislature. The winter of 1886-87 was a memorable one because of the inauguration of the long struggle between the Republicans of the Legislature and Gov. Hill. Mr. Sheehan took a more conspicuous part in these legislative contests than any of his colleagues, and before the end of the session he was the acknowledged leader of the party in all of its aggressive measures. In 1887 he was re-elected and in the Assembly of 1888 was again his party's nominee for

Speaker. Mr. Sheehan's legislative career has not been distinguished by its political struggles alone. He has introduced a number of important bills in the interest of his constituency, and has always been alert and vigilant in guarding the rights of the people whom he represented.

During the last session he introduced the Grade-crossings Bill and procured its expeditious passage. Mr. Sheehan was favorably mentioned as a candidate for Lieutenant-Governor, but owing to an unfortunate clause in the State Constitution which provides that all incumbents of that position must be not less than 30 years of age he is debarred from being a candidate even though he were willing to accept the nomination.

The career of William F. Sheehan thus far has been highly successful, and if any faith is to be placed in precedents, there is every reason to believe that he will some day enter the broader field of national politics and there distinguish himself and his party in a manner which shall reflect honor both upon him and the constituency which he represents.

CHARLES A. POOLEY.

The Buffalo Bar is noteworthy for its young men who have attained prominence in the profession. One of the best known among them is Charles A. Pooley. Mr. Pooley is a native of Buffalo and has resided here all. his life. He was born Nov. 17, 1854. He received his education at the public schools and at the High School, from which latter he graduated in the class of 1873. After leaving school Mr. Pooley entered business life and followed mercantile pursuits for the ensuing three years.

During this period he determined to adopt the legal profession. In 1876 he began the study of the law. His preceptors were the members of the firm of Robbins & Plumley, in whose office he remained for a year, during which time he so well improved his opportunities that in 1877 he was tendered the position of managing clerk in the office of Laning, McMillan & Gluck. Accepting the

After graduation from the Central School. good country-roads, parkways, and asphalt in 1868, Mr. Hickman began the study of the law in the office of Austin & Austin, and

CHARLES B. HILL.

THOMAS B. FRENCH.

"A fireman for 40 years." "The best Chief Engineer Buffalo ever had "-these expressions can apply to none other than Thomas B. French, now senior partner of the firm of French & Kirkholder, dealers in wooden and willow ware at No. 49 Seneca Street, and for periods aggregating over a dozen years Chief of Buffalo's volunteer and paid fire departments.

Thomas B. French was born in Buffalo on the 27th of March, 1829, in a house on the site now occupied by French's block, corner of Washington and Huron streets. His father, Harlow French, came to Buffalo from Rockstream, Yates County, in 1818. Thomas was next to the oldest child in a family of 12. He attended school at No. 13, which stood on the present site of the Washington-street Market. It is related of him that he evinced a strong desire to become a fireman even in his early boyhood, and that his teacher could only compel good behavior from him by agreeing to let him run to fires when alarms were sounded during school-hours. He became a torchboy with No. 4, of which his father was foreman, when but ten years old, and from that time until his resignation as Chief five years ago he remained a fireman-a period of 44 years.

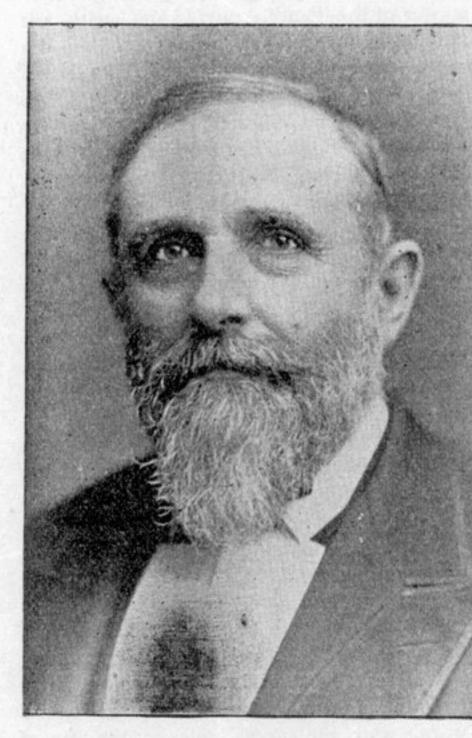

At the age of 15 young French left school and went to work in Henry Colton's store, corner of Main and Genesee streets, where he remained about a year. Then he apprenticed himself to his father and learned his trade—that of a blacksmith. He worked 15 years at this trade, first with his father, then for the State in the canal blacksmithshop below the fort, and finally for himself. His own shop, built by himself, stood where Hardwicke & Ware's store now is.

In 1851 Mr. French caught the gold fever, moving to Buffalo in 1861, Mr. Allen was, and went to California, where he dug in the year 1868, employed in the St. enough nuggets to get home with. On his John's Church litigation. This grew out of return he married Julia Ann Reeves, the desire of a part of that congregation to daughter of Louden Reeves of Buffalo, by change the site of the church. The conwhom he has had two daughters, both of servative party retained Mr. Allen, and whom are living.

sistant Chief under "Ed" Hulbert and six years litigation. Mayor. Politics governed appointments, successful lawyers than James A. Allen. and when the administration was Republican "Tom" French was Chief; when the Democrats gained the upper hand "Ed." Hulbert or some other Democrat was the appointee. In this way Mr. French alternated in and out of office for 20 years. He was Chief during the following years: 1863, 1864, 1865, 1870, 1871, 1872, 1873, 1876, 1877, 1880, 1881, 1882, and part of 1883. In the spring of the latter year Chief French received a severe injury to his right knee by a fall in a burning building. It came near crippling him for life, and on his sick bed he promised his wife never to go to another fire. He kept his promise, and handed in his resignation on May 30, 1883. He has never attended a fire since unless as a spectator.

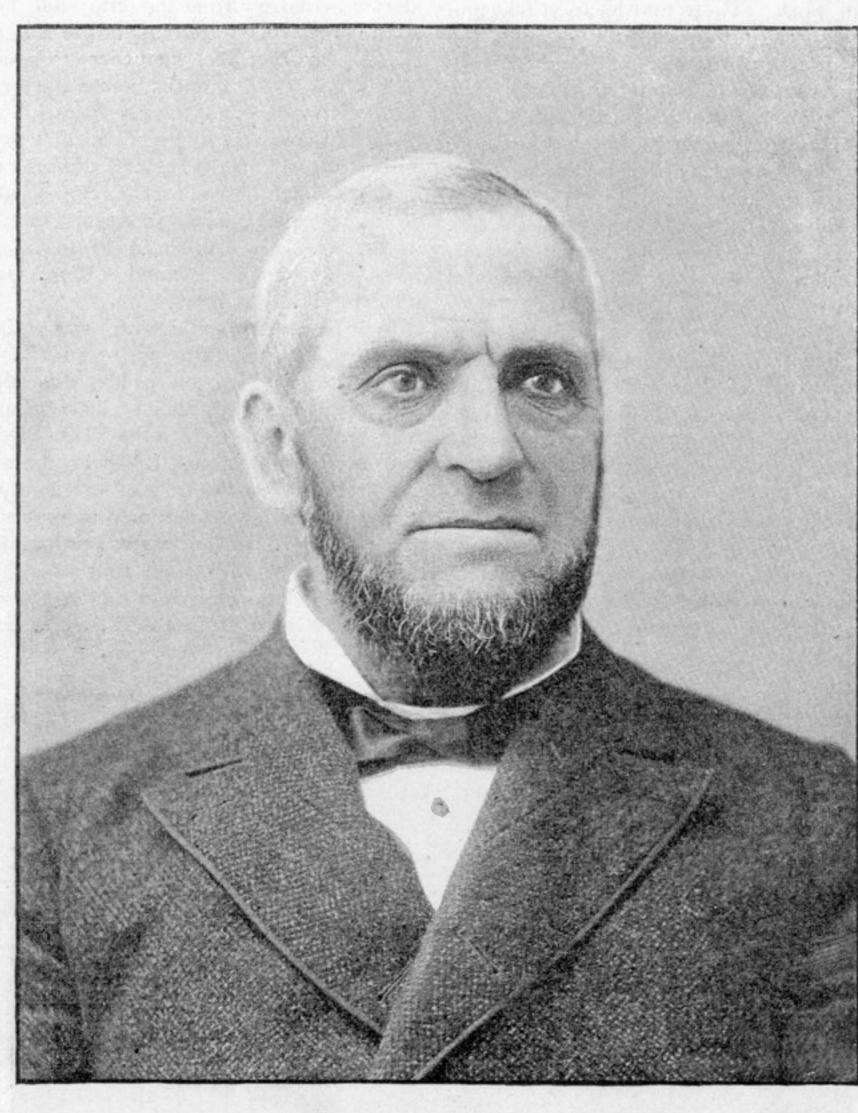

During Chief French's administration he continually strove for a paid department, and it is due in no small degree to his outspoken advocacy and earnest efforts that the Buffalo Fire Department was so reorganized in 1880 and placed in the hands of a non-political board. This achievement alone would have been sufficient to give Mr. French the esteem of his townsmen, had not his courage and common-sense in combatting flames already made him the idol of the firemen and entitled him to the firm friendship of all tax-paying citizens.

JAMES A. ALLEN.

CHARLES F. BISHOP.

Mr. Charles F. Bishop, the wholesale dealer in coffees, teas, and spices, is an example of that excellent order of manhood and citizenship which is the product of German descent combined with American discipline. He belongs to that type of quiet, clear-headed conservative business men who know how to apply themselves to their vocation during the hours of trade, and who know equally well how to enjoy their the company to finish the steamers. These leisure.

Mr. Bishop was born in Williamsville, October 14, 1844. Soon afterwards his River, nearly opposite the Erie Railroad parents removed to Buffalo, where for a few years their son received the excellent educational advantages that are afforded by York. They cost nearly half a million the public schools of the city. At the age dollars, of fourteen years he was set at work in a About the time the steamers were comgrocer's store and continued to follow this pleted, the attractions of Buffalo induced calling, in the employ of others, until 1869. Mr. Parsons to resolve to make it his home when with the accumulations of his years | He started in the ship building business of industry he rented the store at No. 80 for himself and soon had all the work he Main Street, and opened a coffee and spice | could attend to. He was urged to pay his mill. His business success was assured men in the then customary Buffalo way, almost from the outset, and the moderate profits derived from a steady and increasing he steadfastly refused to do, paying his men trade, have grown by careful investment cash in full at the end of every week. JOHN H. SMITH.

For a decade or two past no man in Buffalo has been more active in minding other peoples' business, and at the same time more successful in gaining and retaining the good will of the entire reputable business community, than Mr. John H. Smith, the local manager of R. G. Dun & Co.'s Mercantile Agency.

Born in Portsmouth, England, in 1841, Mr. Smith first set foot on American soil at the tender age of five years. His parents sought a home in Canada, where after a few years both died, leaving the subject of this biography, a lad of ten years, only the legacy of a sound constitution and an inheritance anniversary of their marriage to give a schools of his native village, and was early of pluck. He did not prose- cerned when at the age of 13 he secured a cute his trade, but at once went into the place in a Kingston bookstore and resolutely employ of the Hudson's Bay Company, took up the burden of self-support. Somecollecting fur from the Indians all around what later he crossed the border, and for a the Hudson's Bay region. When he be- time engaged in office work in Utica. After came of age he removed to Waterbury, a few months he returned to Canada, and

bury, Conn., to Fishkill on the Hudson. This finished, he took a contract on the Holyoke & Springfield Road, and then on tract for all of the timber work on the office clerk, Mr. Smith displayed such apti- quite early in life to learn the machinist's Lackawanna and West Shore roads when tude for the work devoiving upon him that trade in conformity with the wish of his father they were building to Buffalo, and in 1882 in a short time he was promoted to the that he should fit himself for the profession his interests here became so large that he position of traveling reporter.

felt compelled to remove to this city, which smaller offices, nine in number, established by Mr. Smith in Rochester, Auburn, Utica, Syracuse, Oswego, Elmira, Scranton, Binghamton, and Erie. All of these offices are prosperous and doing a good business.

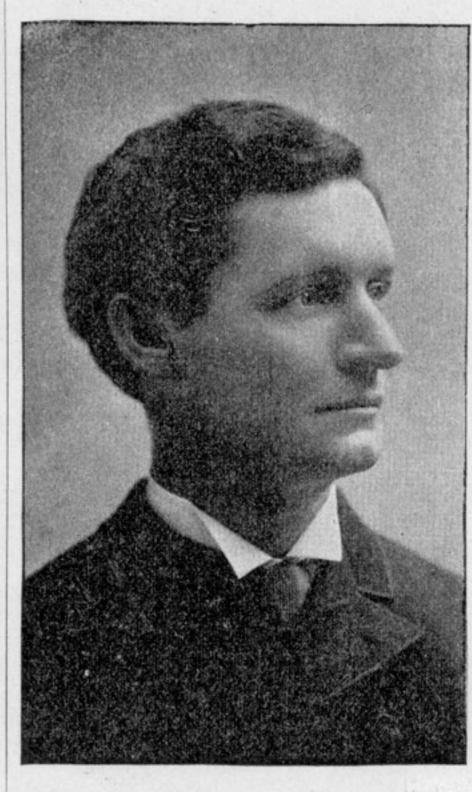

A number of the most valuable features of R. G. Dun & Co.'s reference book and the other departments of the business were originally the suggestion of the Buffalo manager, among them the maps in the book

and the useful marginal trade characters. While the Mercantile Agency has received at all times the first attention and best efforts of Mr. Smith, he has not been inactive in other directions. No man has been more zealous in the work of spreading abroad the fair fame of Buffalo through the organized efforts of the Buffalo Business Men's Association, or more earnest in promoting the fortunes of the enterprises in which he is a stockholder. He is President of the Villa fully in Buffalo. At large expense they in many benevolent works, distributing Park Land Company, Vice-president of the American Business College, and Vice-president of the Buffalo Germicide Company. He was recently nominated at the head of both tickets for President of the Buffalo Business Men's Association, but the pressure

Waite's safe rule to undertake no more than he can personally perform or supervise. Accordingly, while his work displays a decided versatility, it is all characterized by an impulse toward the massive and grand, every one of his buildings being expressive in elevation, well arranged in plan, and permanent in construction.

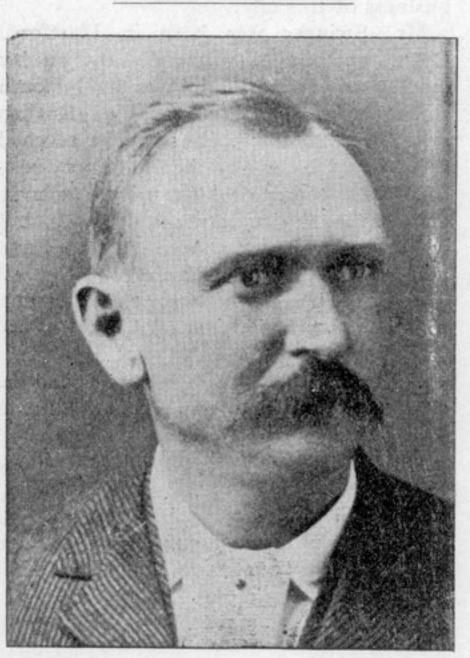

W. S. GRATTAN. There are but few men in this city who in

their chosen line command the respect that is given to Mr. William S. Grattan, one of our most energetic contractors. He was born June 8, 1846, near Stroudsburg, Pa., and after receiving a fair education in the district schools of his native place, spent two years at the Blairstown (N. J.) academy. The times were not such as to allow the young man to finish his education, and he took employment as a clerk in the store department of the Lackawanna Coal & Iron Company. In January, 1867, he left there to take a better place in the coal way-bill office of the Lackawanna, where he soon rose to the responsible position of chief clerk. In July, 1870, when the Utica & Chenango Valley was being built, he was transferred to the engineer's department, and took charge of the supplies and carpenter work for the company. His work attracted the attention of Henderson & Dougherty, a strong firm of railroad contractors, who induced him to enter their service in March, 1871, when they were at work on a ten-mile contract on the New Haven & Northampton road. About December 1, 1871, he went to Ringwood, N. J., where he took charge of the masonry and cutting of a big rock-bed for the firm, who had the contract from the Montclair Midland road. He worked on several pieces of work afterwards, and in 1874 and 1875 was employed on the Fourth Avenue Improvement in New-York. In the fall of 1876 he became foreman of masons for the New-York Elevated Road in the construction of their Third Avenue line, afterwards taking the place of chief dispatcher, which he held during 1878 and 1879.

In the fall of the latter year he went to Northampton, Mass., and took charge of 18 miles of road then building by Smith & Ripley. In 1880 he took charge of six miles of the New-Haven & Northampton road at New-Haven for Smith & Ripley. In 1881 he began contracting on his own account, taking seven miles of the Lackawanna road near Batavia. This finished, he came to Buffalo and superintended the mason-work being put up for the Lackawanna by Smith & Ripley and J. P. Andrews. In the winter of 1882-3 he took charge of all of the Erie County work for Messrs. Peterson & Beckwith, and in March of the following spring began building the Lackawanna shops at East Buffalo.

Since then he has been engaged in many large enterprises on his own account, among them being the erection of the big Lackawanna trestle at East Buffalo, the rebuilding of the docks and relaying of tracks for the Lackawanna at the foot of Main Street, and many similar enterprises.

Mr. Grattan is a Master Mason of high standing, being attached to Architect Lodge of New-York City. He is preparing to soon occupy a very handsome dwelling recently built by him at the corner of Ellicott and Goodrich streets.

PATRICK E. STANTON.

With good business talents and a wide information on all branches of the real-estate business, Mr. Patrick E. Stanton has built up an extensive trade, although he began business as a real-estate broker only five

Mr. Stanton was born in Ireland in 1847, and has lived in Buffalo since 1852. He was formerly engaged in the furniture busi-

The West Side has been the field of Mr. Stanton's operations. In his estimation Black Rock lots are little gold mines. In spite of the facts that it is Presidential year, and that real-estate speculation is quiet, this enterprising agent is selling land rapidly. He sold a tract of 85 acres as far as threequarters of a mile north of the city line only a few weeks ago. It is his prophecy that the out-skirts on the West Side will be rap-

Mr. Stanton has a number of good tracts make a splendid location for a manufactory.

WHAT MAY BE.

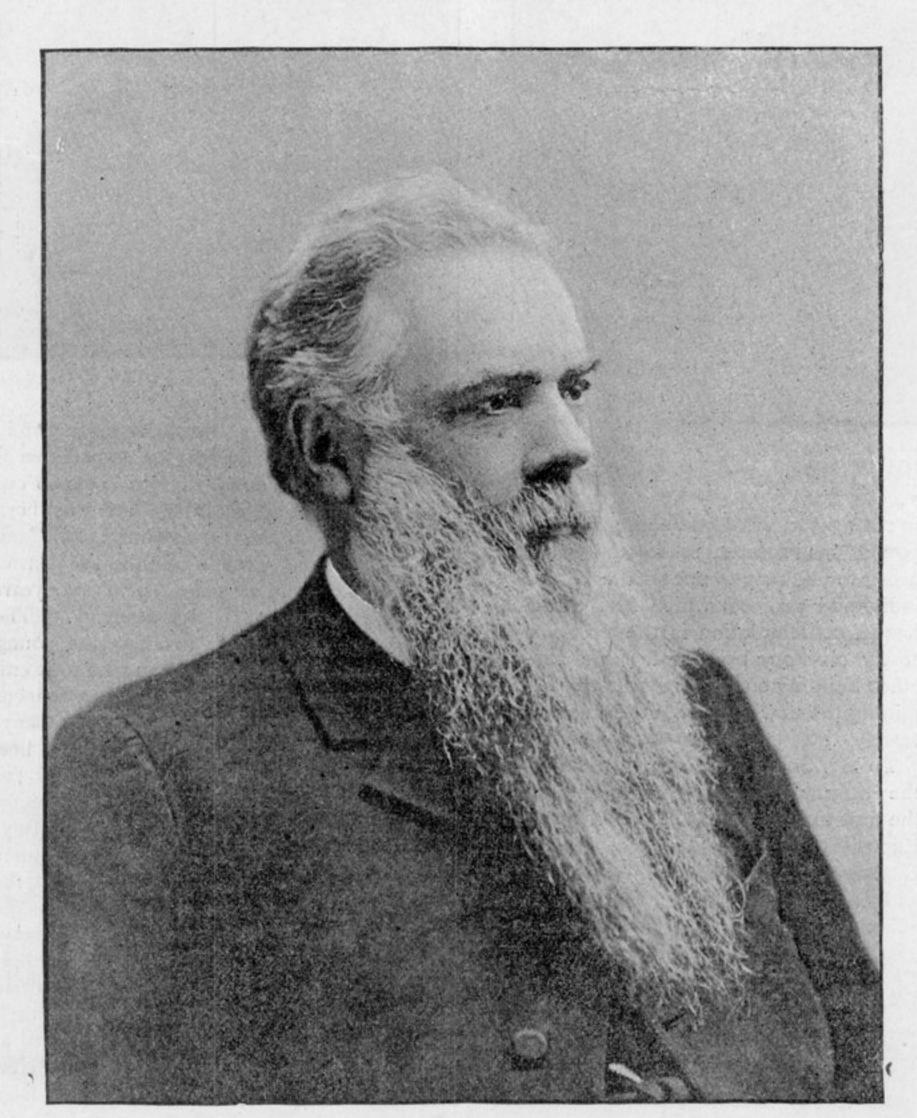

If there should some day be an edition de luxe of this Souvenir Number, with plentiful time for preparation and execution,

WILLIAM W. SLOAN.

A prominent representative of one of Buffalo's greatest interests - the malting in- truthfully said that they have given the city dustry - is Mr. William Wilson Sloan. He more than they have received from her? is of the North-of-Ireland stock which has Probably not. But Mr. David Bell is unfurnished so many enterprising and desirable doubtedly an exception. He has made a citizens to this country, and was born in Bel- name here, and has the good will of every fast, July 6, 1831. The first seventeen years one who knows him. of completion, was the largest in the city Besides being a leading maltster, Mr. Sloan is vice-president of the Thomson-Houston Electric Light and Power Company; a trustee of the Board of Trade, and chairman of the committee on finance; and chairman of the grain-inspection committee of the Merchants' Exchange.

In 1863, as a member of the 74th Regiment, New-York Volunteers, he went to the front. From the Potomac his regiment was ordered to New-York to quell the riot. From that service he came home with a fever which kept him in bed twelve weeks. His only boy took the fever and died within a week. "That expedition," says Mr. Sloan, with earnest patriotism, "cost me my only son and \$17,000. The Government paid me \$26; yet the cost was not too much for the country I love!"

On October 27, 1856, Mr. Sloan was married to Miss Eliza Sims, daughter of Captain Elias Sims of Cleveland, Ohio. Six children were born to them, of whom three are now living. In 1885 Mr. Sloan built the beautiful house where he now resides at No. 869 Delaware Avenue. He is a member of the Buffalo Club. A public-spirited citizen, full of devotion to the interests of the city in which he is so well known and which esteems him so highly, Mr. Sloan is emphatically "a man to swear by."

GEORGE ALFRED STRINGER.

The name of George Alfred Stringer, the senior member of the firm of Stringer & Cady, has been long and honorably associated with the fire and marine insurance business of this city.

Mr. Stringer was born in Hartford, Conn., and claims direct descent on his mother's side from John Alden of Plymouth Rock fame. His father was of English origin. From the cradle until he reached the age of 16, the boy received every educational advantage which private schools and private instructors could afford, but while preparing for college his father met with business reverses which threw the son upon his own resources and compelled him to abandon all thoughts of a professional

At this juncture he was offered and accepted a place of trust and responsibility in this city. Shortly after arrival he entered the office of Rounds & Hall, at that time a leading insurance firm, taking at the outset the post of cashier and chief clerk, and in due season rising to a junior partnership, the firm being then known as Rounds, Hall

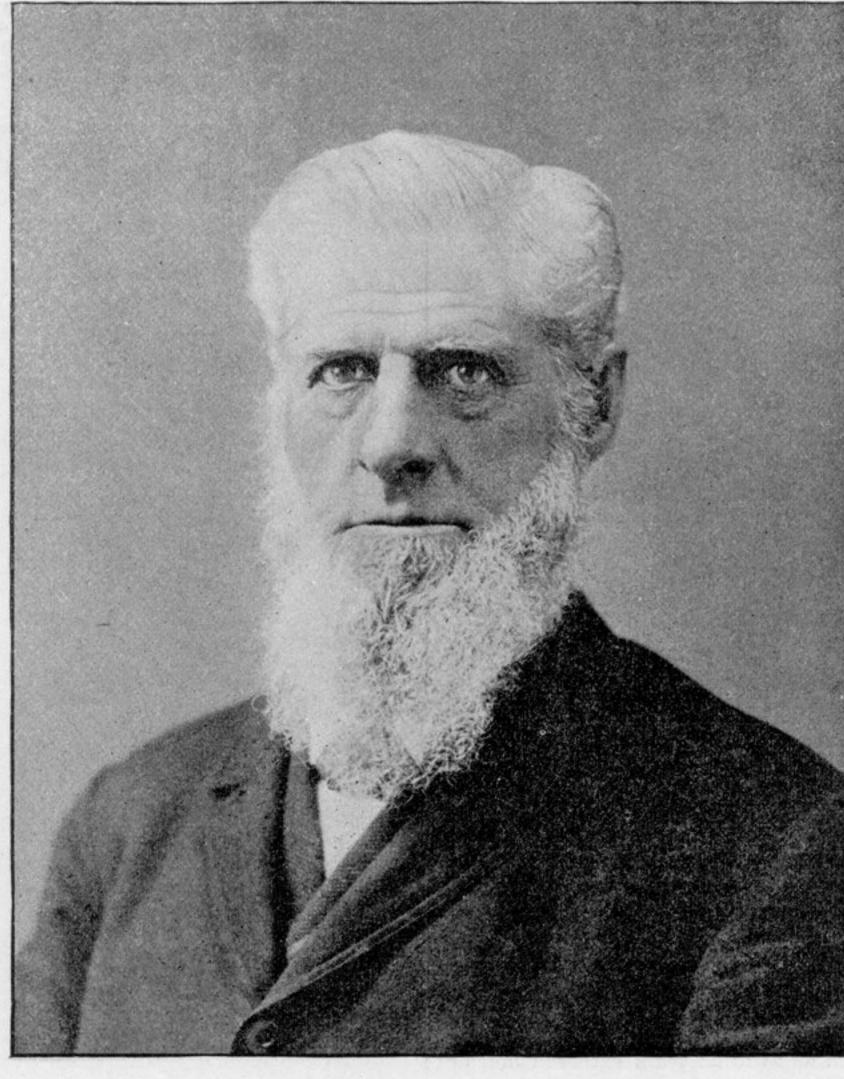

& Co. In 1867 Mr. Thomas G. Perkins, a veteran insurance agent, died, and his business passed into the hands of Mr. Stringer and Mr. Frederick L. A. Cady, who severed their other business connections to form the firm of Stringer & Cady. For 21 years this firm have been taking fire and marine risks, and in the extent of their acquaintance, the volume of their transactions, and their reputation for fair-dealing they rank with the first insurance firms here or else-

HENRY SMITH.

One of the foremost and best known builders of this city is Mr. Henry Smith. He was born in Hamilton, Ont., in 1837, and at the age of twelve removed to this city with his parents. His education had been begun in the common schools of Canada, but was finished in the public schools of Buffalo. On leaving school he was apprenticed to Bidwell & Banta, one of the foremost ship-building firms then on the lakes. In the shops and yards of this firm he received a training and gained a practical experience in his trade such as is rarely obtained. In those days it was not sufficient to learn one branch of the trade to be enabled to set up as a master. The mechanic was obliged to know what he professed to

C. LEE ABELL.

The commercial prosperity of a city is assured if its business interests are managed by capable, enterprising young men. A well-known member of the younger generation of business-men of Buffalo is C. Lee Abell of the brokerage firm of Donaldson & Co. Mr. Abell is a Buffalonian by birth, and for the larger part of his life has been PRESS Building, after the fire of 1885, was a resident of his native city. He was born on the 4th of October, 1856, and received his education at the city schools of Buffalo and at Hellmuth College in London, Ont. Leaving college at the age of 16, Mr. Abell entered the employ of C. A. Blake & Co., wholesale miners and shippers of coal, with whom he remained for some five years. For the next two years he was in the service of the Western Elevating Company. He resigned his position shortly after the discovery of the Bradford oil-field, and went to Bradford, where he accepted an engagement tendered him by the National Transit Company, through Daniel O'Day, its manager. He remained in this field for the succeeding year and a half. At this time the first pipe-line to Buffalo was begun, and the headquarters of the company were estab-

lished here. Mr. Abell came here as clerk to the superintendent of the line. After the completion of the work he resigned to assume within the corporate limits of the city, the superintendence of the construction of but, reaching out beyond the municipal the Marine Elevator, which his father and boundaries, is helping to develop Chautau- Mr. O'Day were building. CHARLES E. WALBRIDGE. Mr. Walbridge was born in this city July 24, 1841, and was one of a large famil of whom his brother Harry and himself are the only members now residing in Buffalo.

His father, George B. Walbridge, was one of the most enterprising business-men of our then youthful city from about the year 1833 until his death, being first in the wholesale grocery business near the foot of Main Street and subsequently engaging in the lake transportation business.

A steamer of "Walbridge's Line" left daily for Cleveland and intermediate ports, and Mr. Walbridge was also builder and owner of a large number of steamers and vessels employed in the upper lake trade. He was actively engaged in benevolent as well as business enterprises, was president of the Board of Trade in 1849, and died in 1852, at the early age of 38, widely beloved and respected as a Christian gentleman.

Mr. C. E. Walbridge's mother, whose maiden name was Wilhelmina Colson, was born in this country, although of German parentage; her father, Carl Von Colson, being a minister of the Lutheran church. Mrs. Walbridge died in this city a few years since, mourned by a large circle of friends.

The subject of this sketch left school soon after his father's death, and as a very small boy entered the service of Messrs. Pratt & Co., at that time one of the most extensive hardware firms in the entire country. He remained there, gradually acquiring a knowledge of the business, until the breaking out of the War.

In September, 1861, he enlisted in the 100th Regiment, N. Y. Volunteers, and was made Second-Lieutenant of Co. H. He served with his regiment throughout the entire "Peninsular Campaign" of 1862 under McClellan, and in July of that year was promoted to be First-Lieutenant.

When, in December, 1862, the 100th Regiment was ordered South to take part in the operations against Charleston, Lieut. Walbridge was detailed as Brigade Quartermaster.

In February, 1863, he was commissioned Captain, and assumed command of his company, but in the following July was again detached and made Chief Quartermaster of the district of the Stono. In this capacity he had charge of the disembarkation of the troops, supplies, and heavy ordnance used in the memorable seige of Sumter and the other forts of Charleston Harbor.

After the ceasing of active operations in that quarter, Capt. Walbridge was ordered to Florida, and acted as Chief Quartermaster of that district until the withdrawal of the troops to join Gen. Grant in Virginia in February, 1864, when he was sent to Glouembarkation and fitting out of the troops as few weeks later, he was stationed on At the time of the establishment of the the river at Bermuda Hundred as Depot Quartermaster of the Army of the James,

> prised the charge of the fleet of steamers, vessels, and tugs attached to the depot; also of extensive repair shops, wagon trains, supplies of coal for the steamers, forage for the animals, and warehouses full of intrenchother innumerable articles necessary for the supply of a great army, with a force of nearly one thousand civilian employes as pilots, stevedores, mechanics, clerks, storekeepers,

> laborers, &c. In the winter of 1864-5 Capt. Walbridge shipped the two Fort Fisher expeditions, each requiring a fleet of over thirty steamers, many of them being of the largest class. The first expedition, under Gen. Butler, was a complete failure; the second, composed of precisely the same troops, with Gen. A. H. Terry as commander, accomplished its purpose, viz., the taking of Fort Fisher and the city of Wilmington.

> In the early part of 1865 Capt. Walbridge was breveted Major for "faithful and meritorious [services." When the campaign which ended in Lee's surrender was about to commence, Major Walbridge was relieved of duty as Depot Quartermaster and ordered to the front, but while engaged in transferring the property of the depot to his successor was ordered by a telegram direct from the Secretary of War to report to Gen. Terry in North Carolina. Arriving there, he learned that he had been appointed Chief Quartermaster of the Tenth Army Corps, with the rank of Lieut. Colonel, being probably the youngest Corps Quartermaster in the service.

> Col. Walbridge remained on duty in North Carolina until he resigned in Oct., 1865. On his return to Buffalo in 1866 he re-entered the service of Messrs. Pratt & Co., where he remained - the last two years as "buyer" for the establishment — until 1869, when he bought out the retail hardware business of Messrs. Hadley & Nichols, whose store was located on Main Street, just below Swan. Needing more room as the business developed, in 1873 he removed to the Sherman block on Washington Street, now occupied by Messrs. Powell & Plimpton. In 1879 a lease was made with Dr. C. W. Harvey of the property corner of Washington and South Division streets, and the present build-

> In 1884 the firm of Walbridge & Co. was organized, Mr. Harry Walbridge becoming a partner, and Mr. George A. Bell of Brooklyn, who had been a special partner since the business started in 1869, retaining his interest. January 1, 1887, Walbridge & Co. purchased the entire stock of shelf hardware, and the good will of the firm of Pratt & Co., who then retired from the hardware business after an honorable career of half a century.

ing was erected.

Walbridge & Co.'s trade has steadily increased in volume, and they now claim to do a larger hardware business than any other house in the State outside of New York City. In addition to their stores Nos. 317, 319, and 321 Washington Street, they occupy for the storage of heavy goods and surplus stock the four-story warehouse, No. 80 Main Street. About two years ago they leased the Fillmore Avenue foundry, and have since operated that establishment in addition to their hardware business.

Mr. Walbridge has always been a supporter of the Republican party. In the Garfield campaign, when three fine regiments of veterans were organized in this county, he was elected to command the brigade with the honorary title of Brigadier General. The "Erie County Union Veterans" rendered most efficient service, and their parades were acknowledged to be among the finest demonstrations of the campaign.

Mr. W. is firm in his belief that the principles of the Republican party will triumph, and that Harrison and Morton will be elected in November.

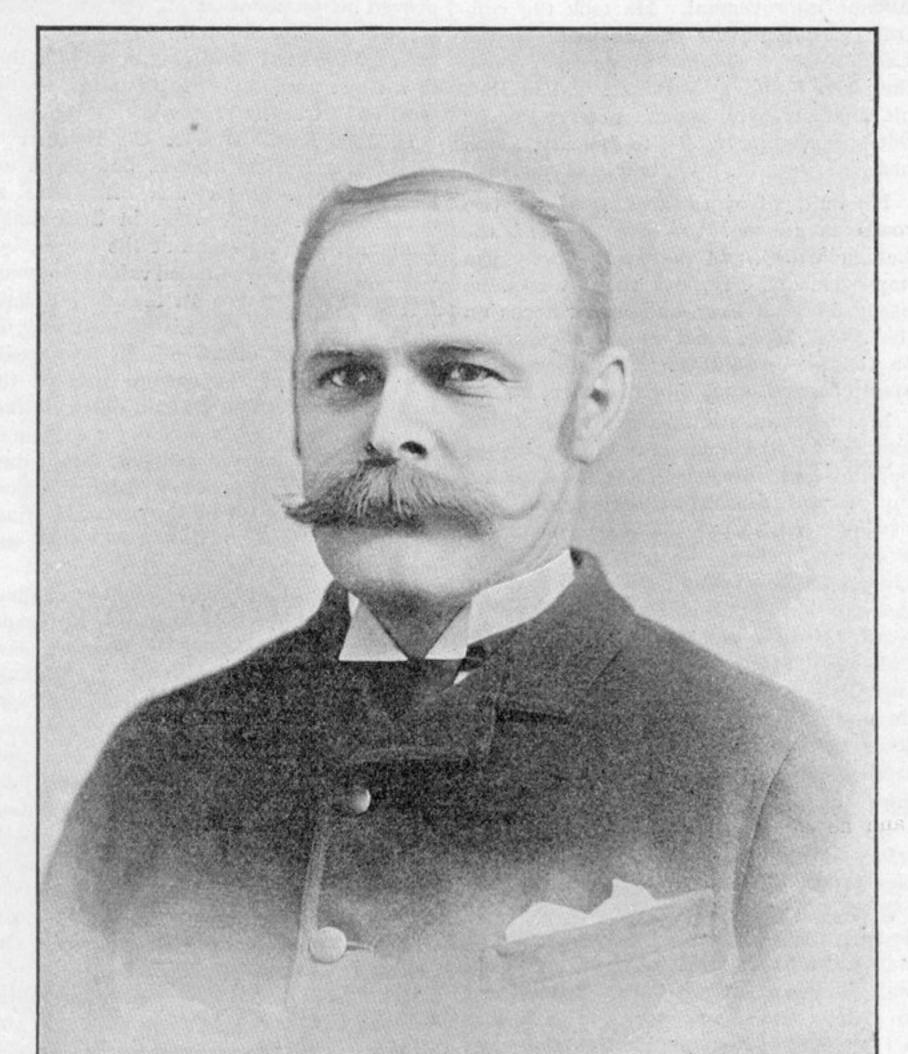

GEORGE ALFRED STRINGER.

abundant evidence to his sound judgment and great executive abilities. The receipts were over \$18,000, and after all expenses were paid there remained a balance of \$4,500 on hand. It was in that year, 1869, that Mr. Bell was the first choice of the Republican delegates for the Mayoralty. His unselfishness is shown in his reply to the chairman of the convention, declining the honor, and giving as his reason: "My duties in connection with the Exhibition engage every moment of my time, and are likely to do so for some weeks to come." That letter was printed in the Commercial Advertises of October 21, 1869, accompanied by an editorial from which the following is clipped:

"While we cannot help expressing profound regret, speaking for the party, at the decision arrived at by Mr. Bell, we cannot either help admitting that he decided wisely, so far as his own interests are concerned; for had he acceded to the very general wish, he would doubtless have been elected, and as he is one of that rare sect of men who cannot assume a duty without endeavoring conscientiously to discharge it, the tax upon his time involved in the Mayoralty would have been extremely detrimental to the large and important manufacturing establishment of which he is the proprietor and astute manager."

Mr. Bell was born on December 7, 1817. in Amisfield, Dumfriesshire, Scotland. At wright, and at 24 he sailed for this country. The next year, 1842, found him in Buffalo, employed at the Buffalo Steam Engine Works. name of Bell & McNish. They had little capital, but invaluable grit and experience, rine and tug engines.

HENRY SMITH.

JAMES MOONEY

JAMES MOONEY.

The fair reputation and social eminence which some men enjoy is founded upon the wealth they have accumulated, while the prominence of others is a just recognition of their deep devotion to some worthy cause. Rarely are the two reasons for distinction, so essentially different, found combined in the same individual.

Buffalo, however, presents at least one such instance. Ask any well-posted citizen to name a Buffalo man who has made a large fortune by judicious real-estate deals, and the answer will pretty certainly be James Mooney. Ask that same citizen to indicate the most ardent and untiring devotee to the Irish cause in the city, and again the answer will be James Mooney.

Mr. Mooney was born in Ardetegal, Queens County, Ireland, June 29, 1838. His parents belonged to the prosperous class of farmers, and the family was noted throughout the region for the patriotic impulses of its members. One ancestor had been executed in 1798 as "a rebel," and the wrong of his ignominious death nad never been forgiven.

When James was five years old his parents, deeming the new world more fruitful than the green fields of the Emerald Isle upon which had fallen the blight of British misrule, emigrated to America, settling at Dundas, Ontario. Here their son was educated in a private school, and here it was he first became familiar with the sad history of his native country, and through listening to the tales of cruel evictions and the tearful recital of sorrows and sufferings by the exiles, became deeply imbued with detestation of the system of misgovernment from which Ireland has so long suffered.

Later on the family came to Buffalo, and Mr Mooney finished his education in the public schools, and began his business career as an accountant for a Tonawanda lumber | began his carpet experience in the very firm. This was followed by a clerical pos- structure which now, forty years later, is ition in the office of the Receiver of Taxes occupied in its entirety by the firm in which and a few months of legal study in the office he is the senior partner. of the Hon. Charles D. Norton.

tious, a keen reader of human nature, and an excellent judge of property valuations, his real-estate ventures, with scarcely an exception, have been crowned with success. large Arcade Building, while his other carpets. property possessions are scattered through every ward in the city.

Although he has steadfastly refused to become a candidate for political office, Mr. Mooney has held many positions of honor and trust. He is one of the Commissioners of the State Reservation at Niagara Falls, Chairman of the Committee on Grounds and Roads of the Park Commission, President of the Real-estate and Brokers' Exchange, and a stockholder in a dozen corprises.

Although deeply sympathizing with the Irish people in their struggle for home-rule, it was not until 1879 that Mr. Mooney became a member of the Buffalo branch of the Land League. In that year Charles Stewart Parnell and John Dillon visited addressed nearly \$7,000 was subscribed. Two years later Mr. Mooney became the President of the Irish Land League of his wise, and progressive, and efficient ad- the branches of the order. Everywhere ministration is best told in the Hon. T. ing the oil country was the purchase of the old farm in Wyoming County where he had passed his boyhood. This property he still owns. This was in 1878. At that time it was thought that oil in paying quantities might be struck in that region. Mr. Matthews leased 15,000 acres in the vicinity of his own property in the interests of Rochester capitalists, and superintended the boring of the test-well. Oil was not struck, but the celebrated stratum of Wyoming salt was penetrated by the drill, and the great salt industry of Western New-York was the

Coming to Buffalo in 1881, Mr. Matthews organized the Buffalo Lubricating Oil Company, which immediately entered upon the manufacture of lubricating and illuminating oils. It was at this time that the contest with the Standard Oil Company began. Suit after suit was brought in the courts by the great monopoly against the new company, and it is said to have been stated by one of the Standard officials that a suit would be begun every month, and if this was not sufficient to destroy the new company, then every week.

Mr. Matthews's company, only one was decided in favor of the Standard Oil Company, and in that instance the plaintiff was awarded a verdict of six cents. Convinced that these suits were a part of a design to ruin his industry, Mr. Matthews brought suit against several prominent Standard officials for \$100,000 damages, and obtained a verdict of \$20,000. The Standard Oil Company subsequently obtained a new trial, during which facts were developed which led him to begin another suit, this time for \$250,000, against his opponents. This suit was kept in the courts for six years, and

ELIHU A. SPENCER.

Mr. E. A. Spencer was born at Fayetteville, Onondaga County, N. Y., in 1834, and moved with his parents to Buffalo in 1836. His father died soon after coming to Buffalo, leaving the mother with four small children to provide for; and at the early age of eight years the subject of our sketch went to work for the Rev. Dr. Lord on his farm on Delaware Avenue near where Hodge Avenue now commences. Two years later found him on the lakes as a cabin-boy. This occupation he followed until he became steward of one of the first-class steamers. At the age of twenty he left the Lakes, and through the kindness of a friend of his father's secured the place of conductor on the Mad River R. R., running between Sandusky and Dayton, Ohio. This position he held until induced to take a clerkship with Mr. R. Y. Kinney, a railroad contractor, who subsequently became his father-in-law.

Returning to Buffalo after about two years' absence, he found employment with the house of Sidney Shepard & Co., with whom he remained for upwards of fifteen years, retiring in 1868 to take the agency of the Amicable Life Insurance Co. of New-York. After having represented that company for about a month, and discovering that he had made a mistake in the choice of companies, he left it to take the agency of the Equitable Life Assurance Society of the United States, which company he has represented ever since, and is now the oldest active life insurance agent in this city if not in Western New-York. Mr. Spencer has been identified with the Buffalo Fire Department for many years, and was at one time a Fire Commissioner. He was also President of Neptune Hose Company, and

JAMES B. STAFFORD.

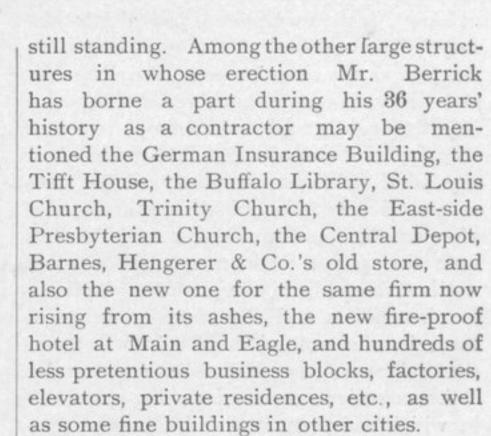

JAMES B. STAFFORD. "If Buffalo had 1,000 citizens like James B. Stafford, despite the lead which New-York already has, the metropolis of the Empire State would be on the shore of Lake Erie," recently remarked a Chicago man who knew something of the potency of pluck, push, and confidence in the building up of a city. This western estimate of one of Buffalo's most active citizens may be somewhat extravagant, but no one will deny that the progressive spirit and intrepid purpose displayed by Mr. Stafford in all his undertakings is the secret of his own remarkable success.

In the veins of Mr. Stafford English, Scotch, Irish, and French blood are mingled in about equal parts. Born in Dublin, Sept. 23, 1853, on the death of his mother, eight years later, he was brought to this country by his father, and coming to Buffalo, started in business as an errand-boy for S. N. Callender, the grocer. Subsequently he worked for a number of other grocery-houses, then carried on business for himself as a street-merchant, and still later was in the employ of Scheffer & Mc-Whorter, dealers in fish, game, and oysters. In the last-named position he displayed an aptitude which in due time attracted the attention of Mr. John H. Jones, a fish-dealer and capitalist, and eventually led to the formation of the firm known as Jones, Stafford & Co., the third member being Mr. O. A. Trevallee.

Business was begun in the 30x60 store at No. 354 Main Street, which subsequently became far-famed as the Fulton Market. About 18 months later the firm was reorganized and became Stafford & Torrey. This arrangement lasted about a year, and thereafter Mr. Stafford conducted the business alone for some years. Finally, one

Company and the American Business bitious to better his condition, Mr. Berrick, College, and is an officer in both at the in 1850, sailed from London for America, present time. He was likewise one of the and on arrival came at once to Buffalo. originators of Idlewood.

Mr. Stafford is married to Miss Harriet Holloway, and their home on Niagara abodes in the city.

STEPHEN F. SHERMAN.

Mr. Berrick has always been a large employer of labor, and the uniform excellence of his work is due to the fact that no matter how great the number of contracts in hand, every structure receives his personal supervision.

STEPHEN F. SHERMAN.

When Mr. Stephen F. Sherman, the manager of the Associated Elevators, first suggested to a number of local capitalists the expediency of constructing a set of railroad elevators of great capacity, to obviate the necessity of inconveniencing both shippers and railroads by storing in the cars sometimes for months the grain shipped by rail, he ushered in a new era in the elevating history of Buffalo. As the result of his suggestions, we have the three splendid structures known as the "International," the "Lake Shore," and the "Dakota" elevators, with an aggregate storage capacity of 3,250,000 bushels. Mr. Sherman was born in Palmyra, N. Y., December 12, 1848. He came to Buffalo in 1863, and entered the employ of the Western Elevating Company as an errand-boy. By in-

dustry and intelligence he rose from station to station until he became the secretary and treasurer of the company. In 1880 he resigned and organized the firm of Sherman Bros. & Co. Limited, with whom he remained until he left them to become the manager of the Associated Elevators. Mr. Sherman designed the "Lake Shore," the "International," and the "Dakota" elevators himself, and the perfect operation of the first two shows how thoroughly he has mastered some of the most difficult problems of the business. The "Dakota," not yet completed, will be the largest grain elevator in the world. It will cover a plot of land 100 by 306 feet, with bins 100 feet deep, and three towers, each 140 feet high. It will have frontages on the Blackwell Canal and Hatch Slip, with Buffalo Creek Railroad connections, thus affording complete rail and water facilities. It will have a storage capacity of 2,250,000 bushels, and will be provided with three marine and six inside elevators. It will have the Mallory system of belt conveyers, incandescent electric lights, steam fire-extinguishers, Frisbie grain-shovels, car-pullers, etc., with sufficient track room to load 20 cars without switching. It will have six canal deliverers and a capacity for elevating 175,000 bushels per day from vessels and 50,000 from cars. The noble structure will be a proud monument to Mr. Sherman's talents, as well as a source of pride to the city.

Mr. Sherman was married in 1870 to a daughter of the Hon. Charles G. Irish His home is on Linwood Avenue.

BUFFALO EN EXPRESS.

ESTABLISHED 1846.

From The Buffalo Express, Jan. 8, 1888. TEN YEARS' WORK.

On Monday morning, January 7th, 1878 the first number of THE BUFFALO EXPRESS was issued under its present management. That is ten full years ago, and the paper was then 32 years old. The decadal anniversary of the "new issue" seems to furnish a reasonable occasion for some remin-

iscent and perhaps personal reflections. The present editor's "salutation" began with a brief history of the paper. As he said then, THE EXPRESS had but precious little money at the start; but with a goodly stock of what constitutes a far more valuable capital - brains, courage, integrity, and industry - its founders soon achieved for the paper a degree of success which was quite satisfactory in those days - 1846. Politically it was warmly devoted to what was then generally known as the "Woollyhead" branch of the old Whig party. In process of time this nation was threatened with the imminent peril of dissolution of the Union, as the only alternative to the greater misfortune of a continued supremacy and an unlimited growth of our accursed system of human bondage. Then the glorious Republican party sprang full formed into existence. To avert both of these evils, to save the Union and destroy Slavery, was that party's divinely-appointed mission. The Express took a leading part and did manful work on the right side of that "irrepressible conflict," which, at length justly terminated, passed into history. Then misfortune came to the paper. As soon as the ascendancy of the Republican party was apparently secured beyond any dispute, The Express seemed to "lose its grip," so to speak. For its founders had separated in the meantime. Other elements of strength quickly departed, one after another, as honest men undertook to save the paper with means inadequate, until at length it became a mere plaything for journalists and the mouthpiece of a few scheming politicians who had fastened themselves to the Republican party by "the cohesive power of public plunder, in which sad predicament its present proprietor found and took it ten years ago. Ten weeks previous to that day he was

and had for fifteen years been the editor and managing proprietor of the Buffalo Commercial Advertiser, and he voluntary retired from that honorable, cherished, and lucrative position-"cheerfully," too, as he said in his valedictory—rather than sacrifice one atom of principle or self-respect, and though he supposed at the time that the step meant retirement from Buffalo journalism forever. "Man proposes, but God disposes." With many inducements to leave Buffalo, with tempting opportunities in wider fields of labor, this obstinate man was, after all, persuaded to remain "at home," and in the field where he was most familiar with public matters - matters whereof an editor who understands his business and appreciates his duties should not fail to speak his plainest.

No sooner resolved than done. The Ex-PRESS certainly afforded a fine scope for the exercise of his utmost abilities, in the task of regeneration, and it fell easily into his hands. So much settled, the question then was: "What will he do with it?" In a preliminary announcement he had given notice that he took possession of THE Express with the settled purpose of making it the neatest and brightest, bravest, best, and cheapest newspaper ever published in Buffalo, steadfastly Republican as to political principles, but absolutely independent in reference to our municipal government -the "organ" of no man or set of men, but in fact worthy to be styled "The People's Paper."

He knew that this had a boastful sound, but it was not a boast. He stated it only as a "purpose," not as a fact. He might fail of achieving success, but at least he meant to deserve it. He did not deem it needful to specify those Republican principles to which he intended to be steadfast. "If our interpretation of the party's faith and doctrine is not very well known already," he said, "the fault is not ours. At the separation."

and within a year, before he was 20, while | ence with Mr. Thomas, he left the good | Mr. Wheeler to withdraw altogether from | An incident of their business was the purchase of a controlling interest in The Ex-PRESS, and they conducted both of the Republican papers in Buffalo during the exciting campaign of 1872 and the first year of Grant's second term. Then they sold out THE EXPRESS. The partnership continued successful and harmonious until the fall of 1877, when another unfortunate political misunderstanding occurred, and they separated, Mr. Warren taking the business, and the other one, who had been editor of the Commercial all the time, taking the Washington Block as his share of the partnership property.

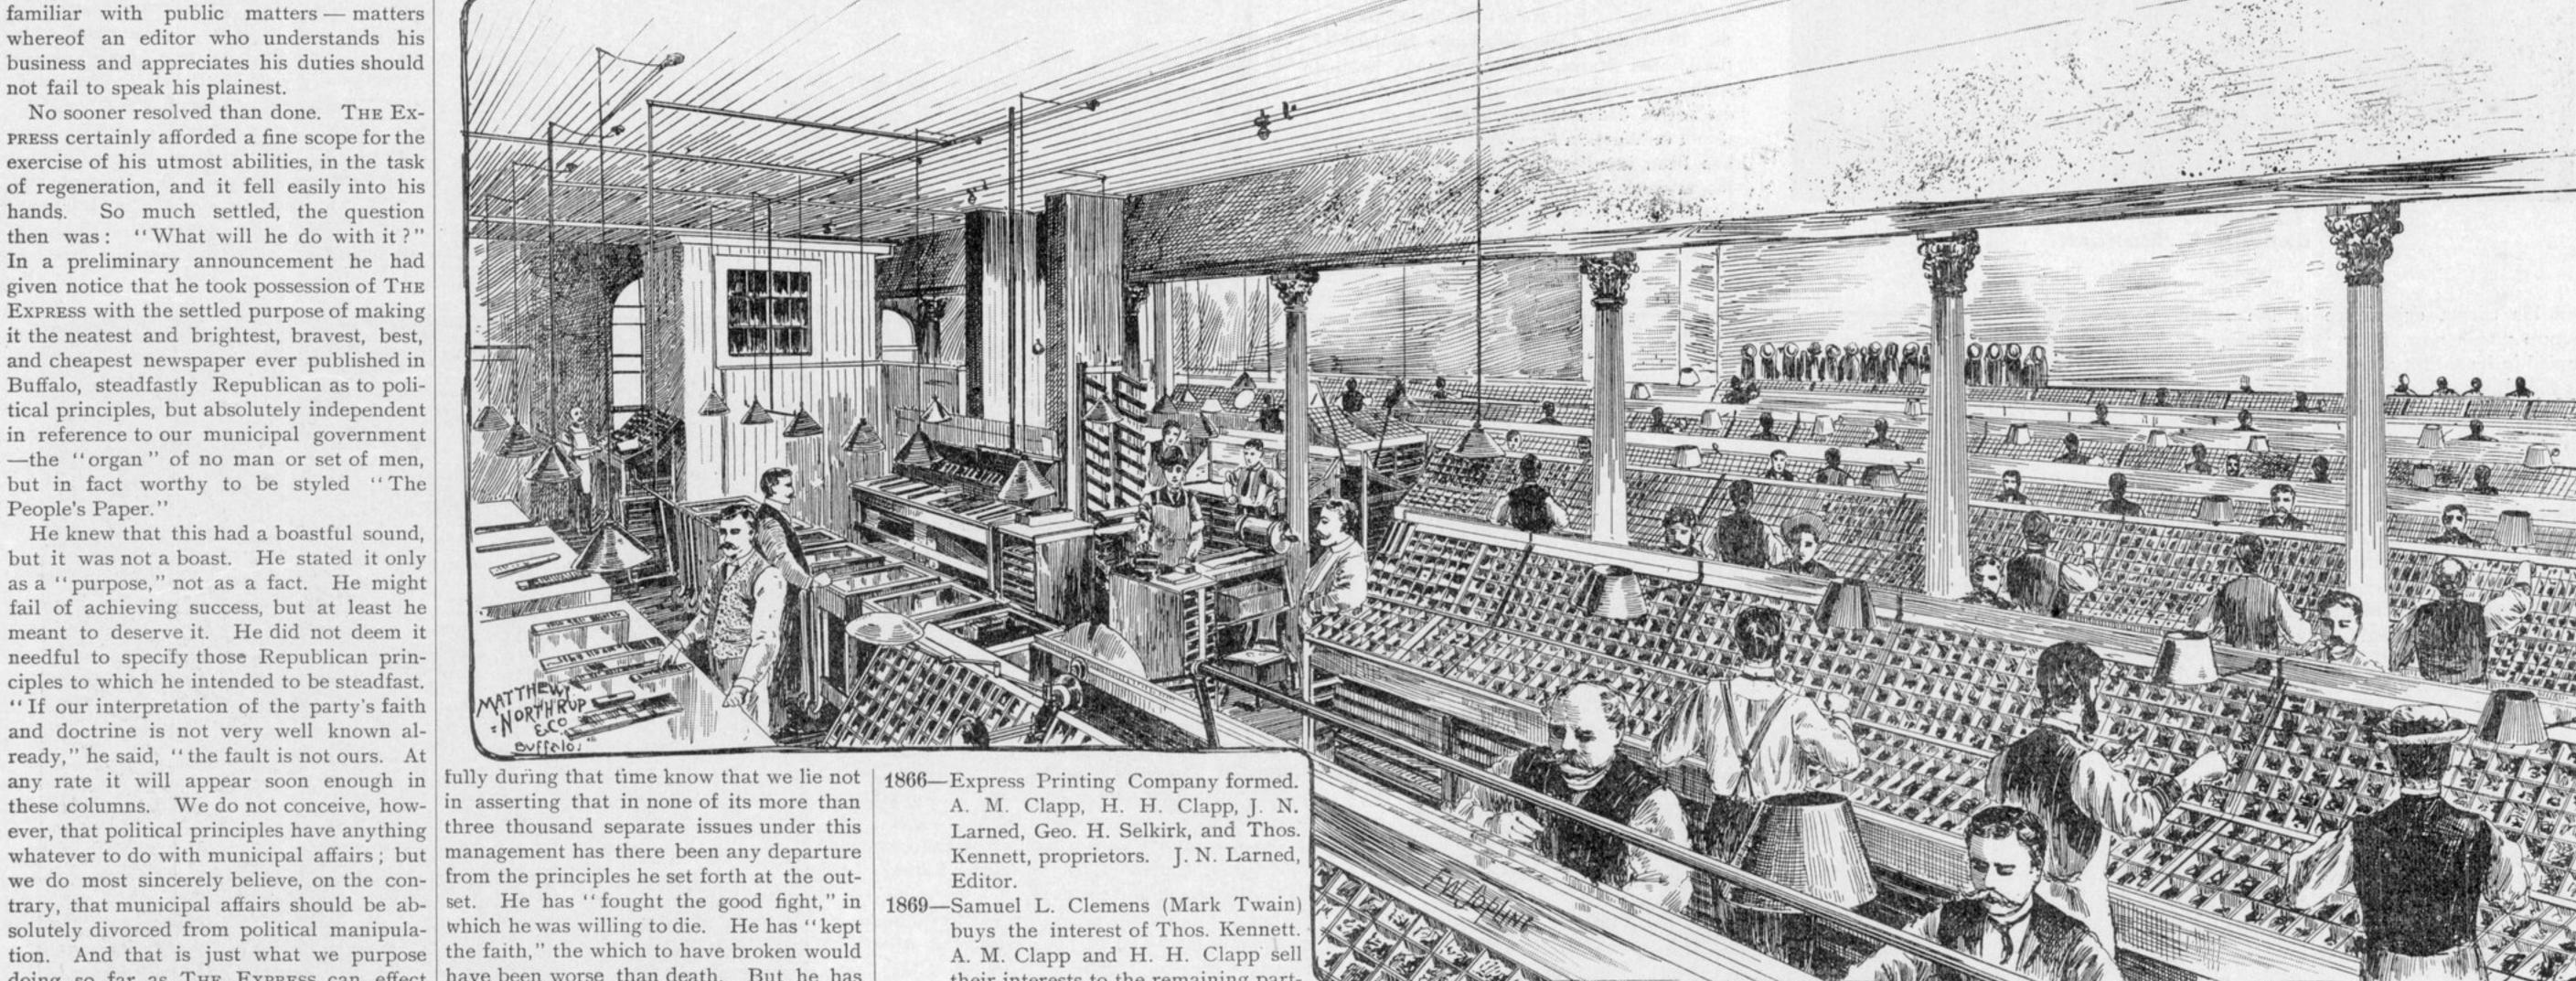

> Mr. Matthews bought THE Express, which had sadly deteriorated, and in conjunction with some younger men, also experts, established at the same time the business which soon became extensive and famous as the great Art-Printing works of Matthews, Northrup & Co. To this concern THE Ex-PRESS is indebted for the entire manufacture - mechanical and artistic - of the present "Extra Number." Regenerating the paper was one thing,

After a few weeks of restless inactivity

and not difficult, but making it profitable was quite another. It took a long pull and a hard one to bring THE EXPRESS up to the standard of financial strength necessary to a successful and useful newspaper. Five years ago its present sole proprietor established THE SUNDAY EXPRESS, which won its way into popular favor with amazing

Mr. Matthews has never held political office. In the twenty-five years of his editorial life no one in any way connected with him ever applied for or received a political appointment. The only public function he ever discharged was as one of the three Inspectors of the Special Election ordered by the Legislature for the Erie Railway, when the Gould-Fiske usurpation was upset, and for this unsought honor - the Inspectors were appointed by Gov. Hoffman - he was probably indebted to the recommendation of his friend Nelson K. Hopkins, then State Comptroller. The only political distinction he ever attained was in going to the National Republican Conventions of 1872 and 1876 as a Delegate-at-large from New-York, and for this unexpected honor he was undoubtedly indebted to the expert efforts of his then partner, the late James D. Warren; in fact the other member of the former firm was always an indifferent politician and so remains. His first vote was cast for John C. Fremont, and he has voted every Republican electoral ticket. He doesn't believe in applying unyielding partisanship to municipal affairs. He believes that the City's business should be managed on business principles, in the interest of the people, and THE EXPRESS is conducted with a faithful regard to this

In 1851, Mr. Matthews was married to Harriet Wells of Westfield, New-York. She died last February, beloved and mourned by all who knew her. They had but two children left, Geo. E. Matthews of the firm of Matthews, Northrup & Co., and Frances Amy Matthews.

JAMES N. MATTHEWS.

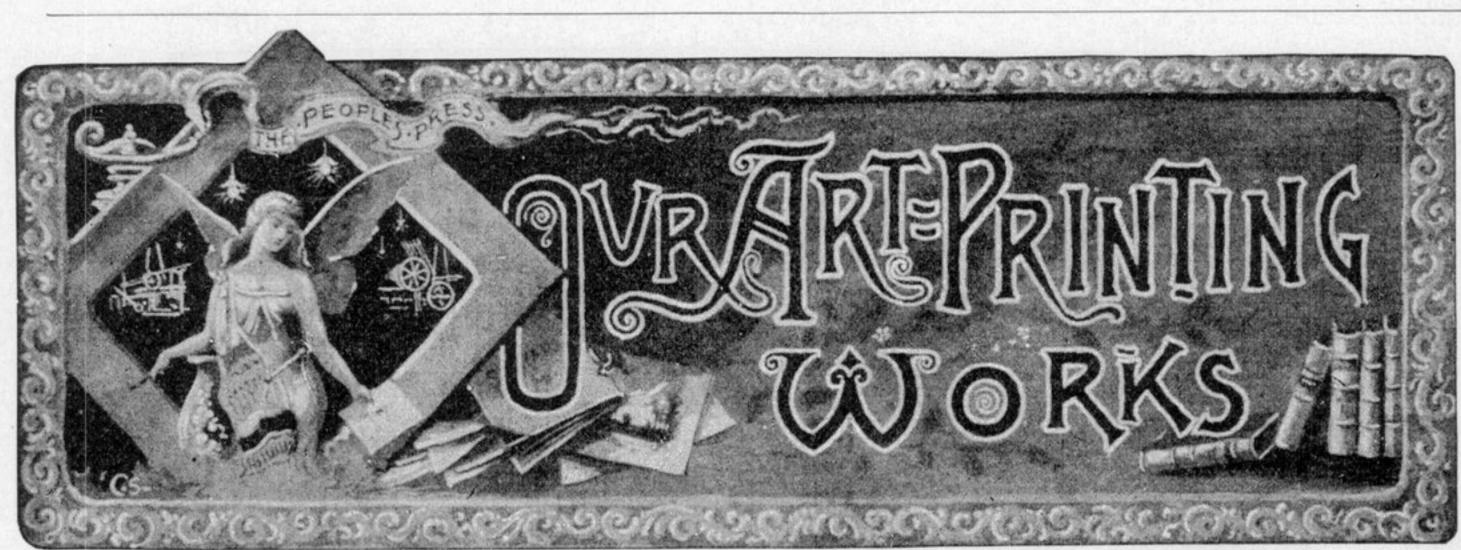

The subject of this sketch is the editor and proprietor of The Buffalo Express. He was born November 21, 1828, in a very small, very old, and very dull town called Bungay, county of Suffolk, England. At an early age, after acquiring rapidly in a public school the rudiments of an education, he was apprenticed to the printing and book-binding business, in which he became unusually skillful some years before his term expired. In his eighteenth year he came to this country, direct to Buffalo, and has lived here ever since. In a few months he entered the printing office of Messrs. Jewett, Thomas & Co. as an apprentice,

school. THE NEW SCOTT PERFECTING-PRESS, BUILT FOR "THE BUFFALO EXPRESS" BY WALTER SCOTT & CO. And Exhibited at Work in the International Industrial Fair.

THE PRINTER'S ART.—Of all known I ways of spreading the knowledge of discoveries or inventions, the fame of cities, or the deeds of men, "the art of all arts preservative" is to-day, as it has been for more than 400 years, pre-eminent. Nor will it be thought strange if you, kind reader, are one of the many whose first knowledge of fair Buffalo, "Queen City of the Lakes," was due to the excellence of some of the many specimens of the typographic art sent forth daily from her gates. Therefore are you, without further ceremony, cordially invited to join in an inspection of one of its modern dwellings - a model and mammoth printinghouse.

Such, in fact, is the establishment of Matthews, Northrup & Co., of Buffalo, N. Y., U. S. A. In the "Washington Block," the home of The Express - a fine exterior view of which is presented herewith - this concern has its extensive plant, the owner and editor of this paper being also the head of the printing company.

This great hive, in which no drones are tolerated, is a building four stories high, with an ample basement, having a frontage of 165 feet and a depth of over 100 feet on Washington Street, and 165 feet frontage on Exchange Street. Fifty feet of the block on Exchange Street rises five stories above the basement, and has a depth of 125 feet. To the visitor desiring to learn something of the various processes in the many departments into which the workers in this miniature world are divided, the 'Open Sesame" is through the business office. Entering the ground floor on the Washington-street front the stranger finds himself in the general counting-room. On making the necessary inquiry, he is soon transacting his business with the proper party. To you, kind reader, who have accepted an invitation to learn some of the mysteries of this temple of art, there is extended a hearty greeting, with a sincere wish that your visit may not be without pleasure or profit.

Before you, as you enter, is the general accounting office, where are recorded all the transactions between the numerous departments of this vast establishment and the world outside. It is a large, welllighted room, the desks of the book-keepers and clerks here at work being conveniently arranged within heavy ash counters and partitions, the latter having large glass panels. Beyond the desk section on one side of the room is a fire-proof vault for the books, safe, etc., and opposite to this a broad stairway leading to the second floor. In the rear of all is the main shipping room, adjoining a freight elevator, which is always in motion, carrying raw materials to the work-rooms above or returning with the finished product ready for shipment to the customer.

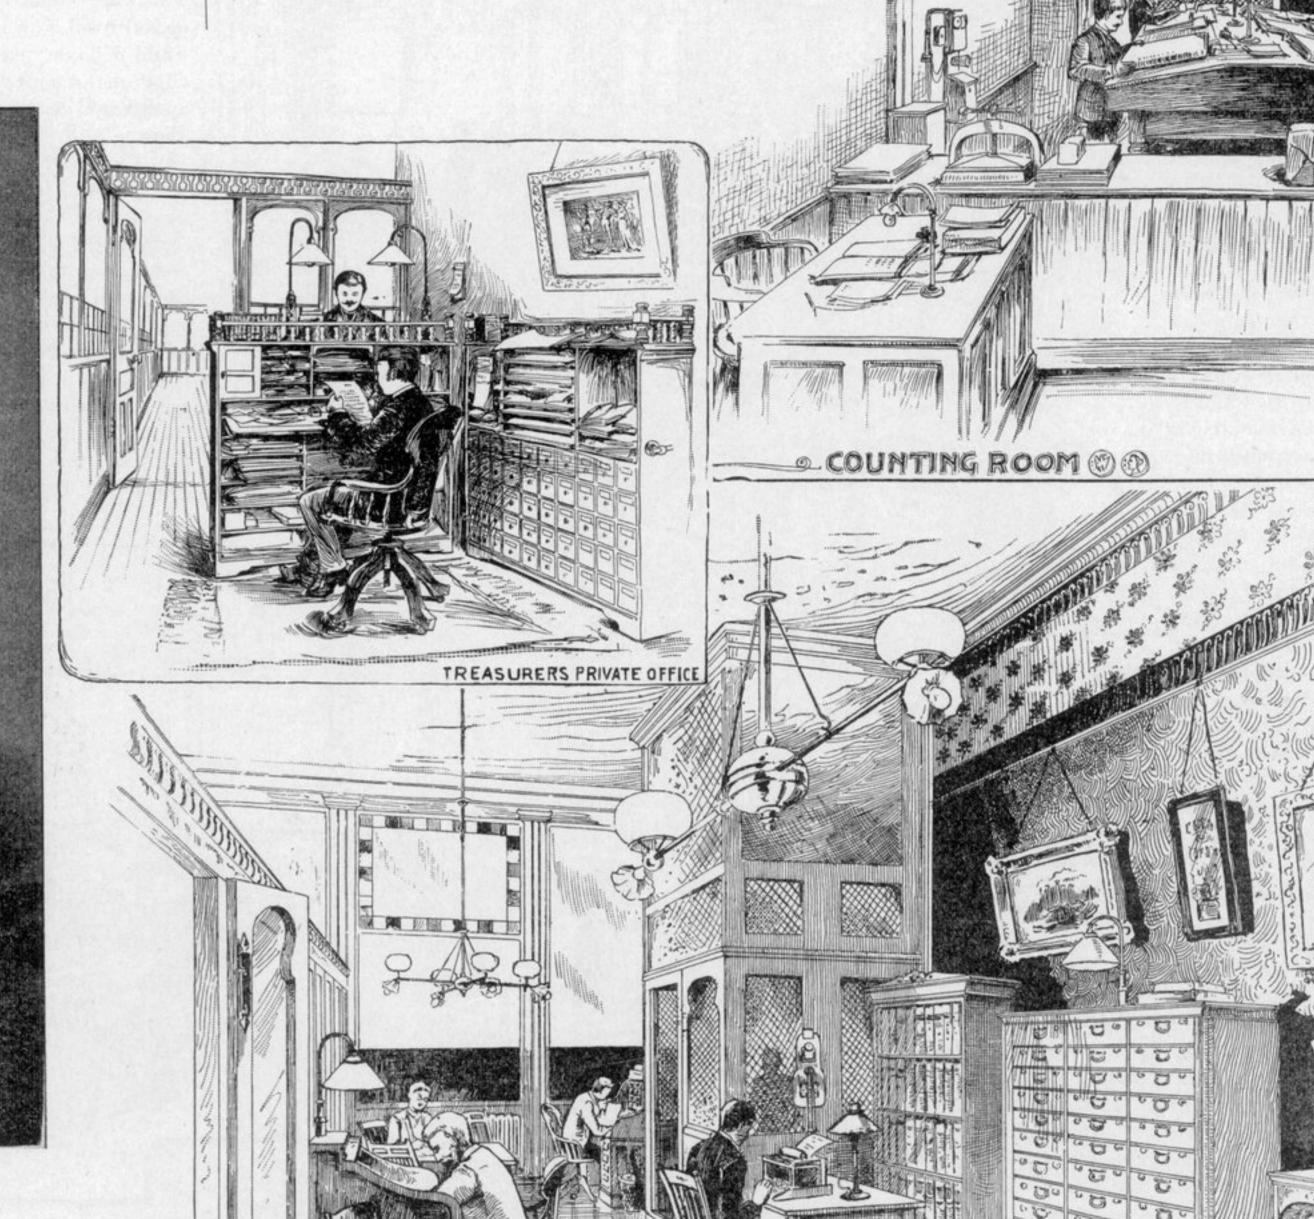

Standing near the front doorway, noting the taste and convenience with which this department has been arranged, you can see through a broad ceiling-high entrance on the left what appears to be its counterpart. Passing through you find yourself in a spacious apartment very like the countingroom in size and cheerfulness. Here are located the private offices of the treasurer, general manager, superintendent of printing, and their assistants; the corresponding and mailing department, all appropriately divided by neat partitions of polished ash, with panelings of plain and colored glass. Here also are kept in convenient cabinets beautiful samples of printing, ranging from the plainest circular or business-card to handsome guide-books of travel and catalogues bound with elegantly illuminated covers. On the decorated walls are also scattered a variety of specimens from the various branches of the establishment.

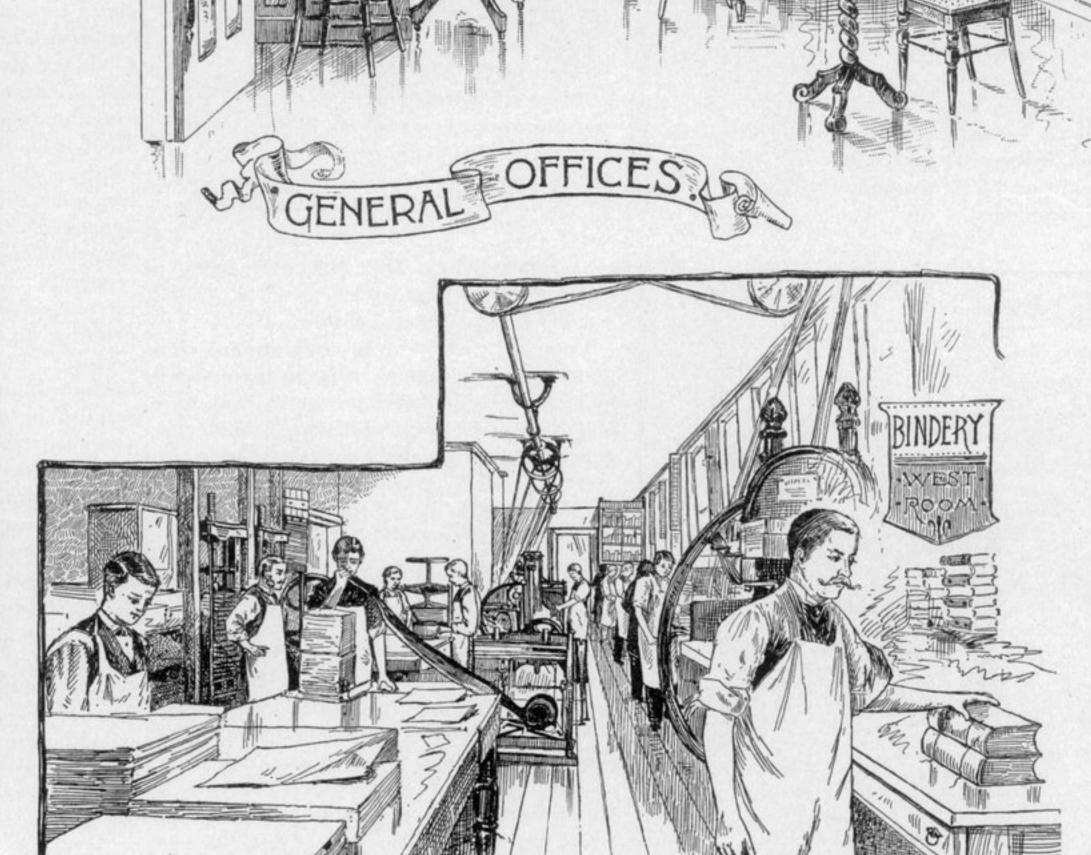

At the back end of this floor, completely cut off from the offices above described by a glass partition extending to the ceiling, is the private office of the senior member of the firm. This is a very commodious room some 30 feet square, with a hardwood floor covered with rugs in Oriental patterns. The general tone of the place savors of quiet comfort. The surroundings are suitable for a man who works hard with an active brain. At one side is a broad open fire-place surmounted by a handsome mantel, suggesting an air of warmth that but fairly foreshadows the courteous greeting sure to be accorded all who enter this "sanctum."

Returning to the office of the general manager on this floor, after scanning on all sides some of the beautiful specimens of fine workmanship for which this house has become justly celebrated, the visitor is invited to step into the car of a swiftly-moving hydraulic passenger elevator close at hand. An instant later the upper floor is reached, and you enter the Art Department. The "Studio" is sufficiently elevated above the busy street to be free of annoyance from the din below, faint echoes of which occasionally serve as a reminder of life in the world without, to which the processes within lend such valuable assistance. Here are quartered a corps of artists whose fertile minds and quick-moving pencils rapidly elaborate on paper the crude idea of the customer. Designs for illuminated covers, sketches of interiors in some great business establishment, or bits of landscape for illustrating a tourist book, are in various stages toward completion on the draughting-boards before the artists. In all parts of the room, on walls and desks, are specimens of completed productions from the presses, the basis of which was first wrought here. Here also are noticed many of the leading art publications, containing valuable funds of information; for the artists have all available aids toward keeping up with the times. Naturally enough, the unspoken comment as one turns away from the Studio is to the effect that if appropriate surroundings can speed the evolution of bright ideas, surely here are all conditions favorable.

Having in imagination completed one of the many sketches with which this tour is illustrated (all of which were drawn here), look in upon the Photographers. contents of which are made the moulds. Upon these are placed the cuts, or type, and a heavy hydraulic press quickly makes their counterpart reversed. Large electric baths, charged by swiftly revolving dynamos, speedily deposit a copper facing in the moulds, and from a monster cauldron of liquid metal comes the substance that gives the plates their backbone. On all sides are curious machines, that square and trim the plates and cut away any superflous metal as if it were so much chaff; while at conveniently-arranged benches before the windows are the "finishers," who deftly inspect. and correct each plate before it is pronounced ready for use.

With the story ready and the scenes it describes duly illustrated, types are needed to tell the tale. The Composing-Room, adjoining the Engraving Department, is 50x 75 feet, roomy, and perfectly lighted by many windows and skylights. Here are rows of "frames," almost without number, each one filled with "cases" containing all that is newest and best in the countless styles of metal letters in vogue to-day. There are artists in type as well as with pencil and graver, and in this company of more than half a hundred workers there are many skillful printers, In typography there is no limit to ingenuity and skill; and with the aids in the way of fancy ornaments, borders, etc., the products of the modern type foundry, our artist-compositor produces results so perfectly counterfeiting the engraver's art as often to defy detection by any but the most expert eye. In this department, in addition to the job and book work of every description, is done the composition for several periodicals published by this house and other firms, including the is necessary, except a plain statement of Department, already described. These regular publications, in themselves furnish-Again, by the aid of a somewhat elastic | ing work enough for an ordinary printing

Each compartment and every plate therein is numbered, the corresponding numbers being marked on the prints contained in the big volumes in the Proof-Room "library," before described.

But there is yet more to see. Taking the elevator again, stop at the third floor, and inspect one of the largest branches of all the Bindery. Five large, airy, well-lighted rooms (all connected by large openings with iron-plated doors) present a variety of scene that is ample excuse for the fascination of the eye. In the Folding-Room piles of freshly-printed sheets are rapidly melting away beneath the nimble fingers of many bright-eyed young women, all busy as bees in a hive. In another department the folded sheets are being sewed together into the first semblance of the book or pamphlet. The backing department, where much of the work is done by machinery, comes next, and then the superfluous material is trimmed off by the cutting machines, and the covers are put on. No small portion of the work

in binderies nowadays is done by machinery, and all here found is of the latest approved patterns. A monster hydraulic press, with power capacity for a squeeze of seven hundred tons, takes from the paper any impression left by the types. A heavy embossing press is constantly at work stamping covers, book after they are ready for the covers. In the blank-book and stationery department, from which go forth many of the account books and blank forms used in the local banking-houses, counting-rooms and railroad offices, are smooth-running ruling and numbering machines, perforators, wire stitchers, book-sewing machines, and other labor-saving devices that increase the capaon the busy freight elevator and carry the city and raise the standard of the work

This one, thus hastily visited, is among pleted daily—such as railroad guide-books and folders, school publications, general quantity of any one of its products, all of which, however, will bear the closest criticother houses, without fear or favor.

Messrs. Matthews, Northrup & Co., Buffalo, N. Y. :

Dear Sirs: I wish to thank as well as congratulate you on the geographical correctness and superb artistic finish of our new Western & Atlantic folder map. It is the best railroad map I have ever seen, and I take pleasure in writing to you what I Gentlemen: Your sample copies of the have several times said to others, that I Journal were duly received, and we wish to think that no other house in America compares with yours in Map-making.

With kindest regards, yours very truly, JOSEPH M. BROWN, General Passenger Agent W. & A. R. R.

St. Louis, Mo., Nov. 14, 1887. Matthews, Northrup & Co., Buffalo, N. Y .: Gentlemen: I desire to say that we specially significant in connection with the are more than pleased with the map of the Cotton Belt Route, and consider it the handsomest and best map ever gotten up by any one, and we thank you for the pains which you have taken with the work, and can assure you that whenever we have anything which we can send so far from home, Matthews, Northrup & Co. shall not be forgotten. Yours truly,

E. W. LABEAUME, A. G. P. A. St. Louis, Arkansas & Texas R'y. This was a large wall map of the Southwest, engraved and printed in colors and

mounted on rollers. In taking leave of an establishment so more than a year's work for two machines | thoroughly equipped that every requisite raw materials alone excepted - for letterpress, color, and illustrated work of the very best style, is furnished on the premises a retrospective view will prove of interest. is careful workmanship more necessary | The separate departments are as follows: than in the production of illustrated stove Designing; photo-engraving and photo-zinc catalogues. For this class of work a repu- etching; wood, metal, and relief-line engraving; electrotyping and stereotyping; type-setting (two departments); press-room (three departments); bindery (five departments). More than an acre and a half of partments, in which over 200 people, find employment. All of them, whether managers, superintendents, artists, photographers, foremen, pressmen, or compositors, are striving together to turn out work which shall be unexcelled anywhere.

The facilities and talents here brought together represent a very heavy investment, and it may be confidently believed that even this hasty examination of their resources will amply justify the assertion that the Art-Printing Works of Messrs. Matthews, Northrup & Co. must be ranked with the most complete concerns of the kind in the world.

purpose then was to start in business for himself as soon as possible. Thus perience in New-York he returned to Buffalo and began business for himself as a lithographer. The venture, at first on a small scale, over the corner of North nia. Division and Washington streets, prospered from the beginning, and has grown to include the many branches of engraving, 1842, and Frederick C. M. in 1846. The lithographing, book and job printing, and binding. In 1886 the company of which Mr. Gies is the head erected the extensive buildings which it now occupies, at the corner of Swan and Center streets. Here Mr. Gies gives close personal attention and supervision to the large business which his thorough ability and industry have built up.

RUFUS M. CHOATE.

The travelling public needs no introduction to Mr. Rufus M. Choate, the popular passenger agent of the Western Transpor- tioned at Fortress Monroe. Mr. Lautz tation and Union Steamboat Companies, accompanied Gen. Butler's expedition to who for over a quarter of century has been Fort Hatteras, N. C., where the first ticketing westward-bound lake tourists to prisoners were taken. He was an eye-Chicago and beyond.

county, October 5, 1840. His common school education was supplemented by a months' instruction in business methods at Bryant & Stratton's College in this city. In 1860 the ambitious young man went west; but returned the following year. He was among the first to respond to the call of his country for three months' volunteers to suppress the Rebellion, and together with the gallant company of Clarence boys proceeded at once to the front. At the close of a term of patriotic military service he was honorably discharged. Upon his return to Buffalo he became identified with the transportation business as an employee of the late Charles Ensign. His aptitude for this calling led to a rapid promotion and in due time he was appointed general passenger agent for all the Chicago lines. In the year 1884 Mr. Choate entered into carry on a general real estate, insurance, and ticket business at No. 122 Exchange

Street. Mr. Choate is a large owner of real estate in the Thirteenth Ward, and his house and grounds are the finest in that section of the city. He is untiring in his efforts to secure for the southeastern portion of the city rapid transit, better drainage facilities, and the projected \$100,000 park-all of which he expects to see secured within the next five years or sooner.

FERNANDO J. RIESTER.

Mr. Riester is the proprietor of the Buffalo Stained Glass Works, and a successday of March, 1840, and is a native of Central France. Emigrating to the United has remained here ever since. In 1856 he entered upon the study of his art under the a natural aptitude for it, Mr. Riester soon became proficient in its various details. He worked at the business as an employee until and has since been engaged in the production of artistic stained glass. In January of the present year he became sole owner the business of heating and ventilating 16

CHARLES LAUTZ.

THE LAUTZ BROTHERS. It is hardly necessary to say that the it was that after a year's profitable ex- faces here presented are those of three of the Lautz Brothers. Few men are known so well. Uprightness and enterprise have made them known from Maine to Califor-

> The three were born in Dieburg, Germany, J. Adam Lautz in 1840, Charles in family came to this country and to Buffalo in 1853. Their father, Wm. Lautz, was a candlemaker and began business at once. After buying a \$5 kettle, he had \$9 left for capital. He used to make the candles at night, and in the daytime the boys used to sell them and buy raw material for another night's work.

With the aid of a small iron wash-kettle and a kitchen stove, the elder Mr. Lautz branched out into soap-making. From that day to this the Lautzes have prospered.

Their great soap factory on Hanover Street has the capacity for turning out 1,200,000 pounds of soap a week. The firm have branch offices in New-York, Philadelphia, and San Francisco, and agents all over the country. The Lautz Brothers are also interested in the Niagara Starch Works, Wesp, Lautz Bros. & Co.; the Niagara Monument Works, Lautz & Co., and the Niagara Tool Factory.

The Lautzes are public-spirited citizens as well as energetic business men. They have been especially connected with the growth of Buffalo's musical organizations; in fact, there has been hardly a single important musical event in the city for years in which they have not taken an active part.

Mr. J. Adam Lautz went to New-York in 1860, when 20 years old, and responded to the first call of President Lincoln for 75, 000 men, joining the 20th New-York State Volunteer Regiment, which was first stawitness of the burning of Hampton, the Mr. Choate was born in Clarence, this Merrimac-Cumberland fight, the blowingup of the Congress, and the Monitor-Merrimac fight. He was engaged in the Seven course at the Clarence Academy, and a few Days' battles in the Peninsula, the second battle of Bull Run, the battles of South Mountain and Antietam, the first, second, and third Fredericksburg fights, Gettysburg, and many lesser engagements.

Mr. Lautz was one of the organizers of the Orpheus Singing Society and was before that an active member of the Liedertafel. He is president of the German Young Men's Association, a member of the Merchants' Exchange, president of the Ziegele Brewing Company, and holds a number of other offices.

connected with the erection of Music Hall, and is at present one of the building committee of that institution. He was for several terms president of the Buffalo Catholic Institute, is one of the directors of the Buf-

sion. He was one of the organizers of the blacks' Home. old Philharmonic Quartette, and is now President of the Buffalo Orchestra Association. He is also first vice-president of the Buffalo Musical Association, and has been baritone soloist at St. Paul's for the last 13 years. Among his business enterprises is the Queen City Cyclorama Company, of which he is President. Mr. Lautz served for a year and a half on the local board of Civil-service Commissioners.

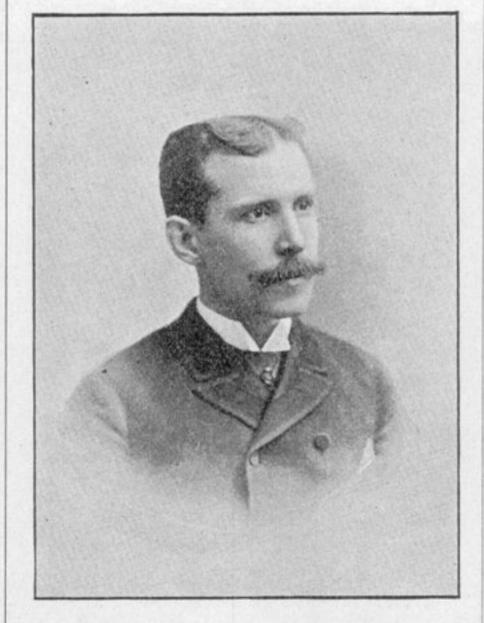

C. K. SUMMERHAYS.

The subject of this sketch was born in Rochester some 29 years ago, and began in to Buffalo to open a branch store for his soon forgotten. The situation is ideal—the tional Exposition at Toronto; in 1887, the W. A. Case & Son.

J. ADAM LAUTZ.

employers. Two years later he succeeded them in this establishment, and has since conducted the business himself, doing a yearly business of from \$75,000 to \$100,000 and employing from 40 to 50 men.

Though only five years a resident, he is widely known, and his list of references includes some of the most prominent public and private buildings and residences in the city. Within the year Mr. Summerhays has heated the Niagara Hotel, the Burt, Lewis, Tucker, Courier Company, John C. Jewett, Cosack & Company, and other buildings and many private homes, among which are the new houses of Dr. M. D. Mann, George H. Dunbar, C. W. Miller, L. G. Millard of Indianapolis, George Goetz, Harry Ramsdell, and the offices and homes of Green & Wicks, the architects. His business is steam and hot-water heating only, and all work is superintended by one of the best steam engineers in the country, Mr. A. Milligan.

ROBERT S. DONALDSON.

The 33,000 depositors in the Erie County Savings Bank will be glad to possess a good picture of the custodian of their funds, Mr. Robert S. Donaldson, the secretary and treasurer of the institution, and will be interested in learning something of his personal history. Mr. Donaldson was born in Buffalo,

September 20, 1851, and was educated in the grammar schools of this city, followed by two years in the Central School. He then entered Bryant & Stratton's Business College, where in six months' time he completed the prescribed course. On the 11th of March, 1868, he entered the Erie County Savings Bank as a clerk, and has remained there ever since. His industry, business Mr. Charles Lautz has been prominently aptitude, excellent personal habits, sound judgment, and deep devotion to the interests of the institution duly impressed the officers and directors, and promotion followed promotion until on the 6th of November, 1886, he was elected secretary a co-partnership with Mr. J. E. Walsh to falo Business-men's Association, and is and treasurer to fill the vacancy occasioned treasurer of the Villa Park Land Company. by the death of Cyrus P. Lee. A more Mr. F. C. HENRY F. ROESSER.

Unquestionably one of the very best hotels in this country, taking into account architectural beauty, elegance of interior finishing, convenience of arrangement, efficiency of service, and excellence of cuisine, is the Niagara. It is a massive structure, five stories high, in the Colonial style, of pressed bricks and Medina sandstone. It is situated at the corner of Seventh Street and Porter Avenue, upon the highest point of land in the city, known as Prospect Hill, and on one of the principal parkways. Prospect Park is on the right and "The Front" on the left. The view from the Niagara is indescribably fine. The broad sweep of the waters of Lake Erie in the distance, the gleaming current of the great river near at hand, the shores of Canada

ed oak, with polished hard-wood floors covered with oriental rugs. The kitchen and bakery are in buildings separated from the hotel. Steam and odors can not penetrate the main building.

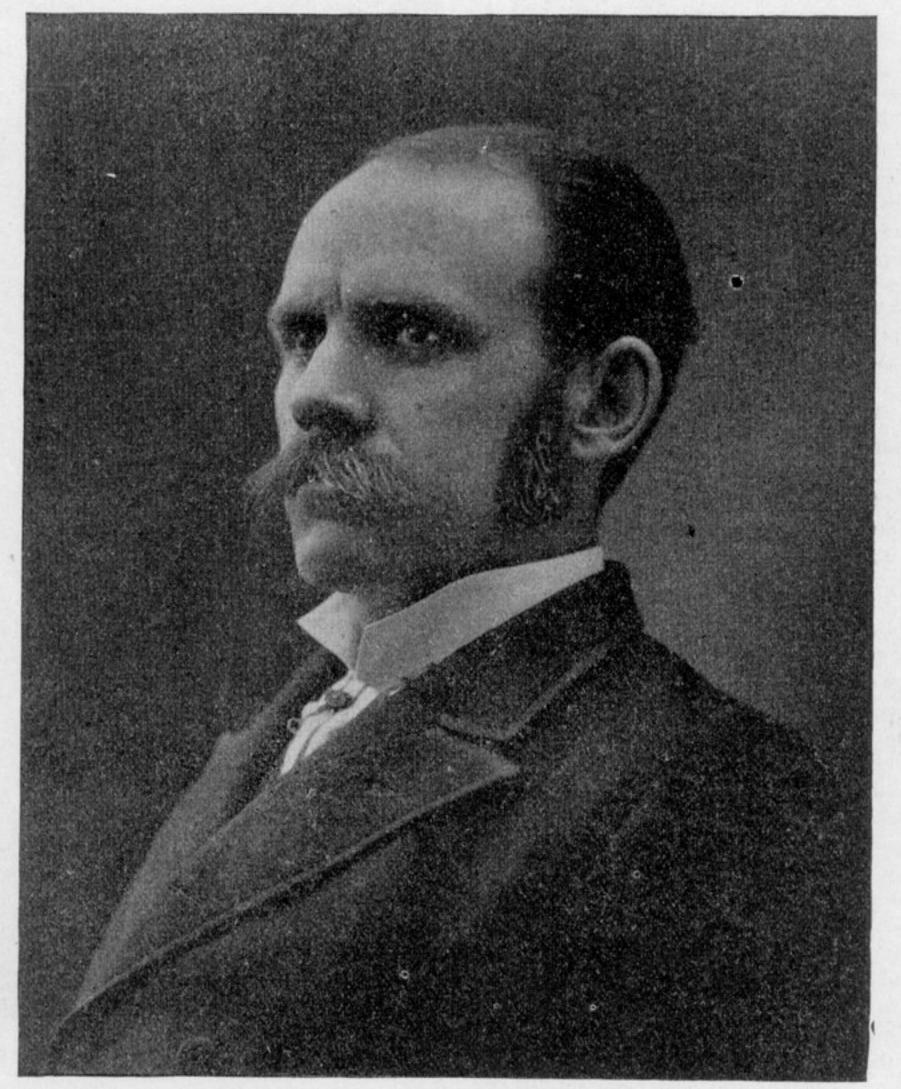

The management of the house is in the hands of Mr. Henry F. Roesser, a wellknown hotel man, formerly manager of the Palace Hotel, Buffalo, and more recently of the St. James Hotel, Gilsey House, and Hotel Brunswick, New-York City. Mr. Roesser is one of the most affable of men, and has a host of friends among the hotelpatronizing public. Under his management the Niagara is a model in all departments of its service, and the more experience the guest has had of famous hotels the more there is in existence.

H. McMICHAEL.

triumphs will be found of interest.

W. A. CASE.

Probably no man among those who have been long engaged in trade in this city has a larger circle of friends and acquaintances than W. A. Case. Taking a prominent part in the business life of Buffalo, especially in the earlier years of the city's development, he has gained a reputation for integrity and business foresight second to none. Mr. Case was born at Hammond, a little village in St. Lawrence County, a few miles from Ogdensburg, in 1824. While he was still a child his parents removed to Watertown, where they resided for several years. When he had arrived at the age of eight, his parents again removed, this time to Schenectady. Here he attended school until he was 14 years of age, certain he is to recognize and appreciate at which time he was employed by his father the indisputable fact that the Niagara to- to work upon the farm. Its bench

The Hon. Charles Daniels. The senior Justice is the Hon. Charles Daniels, who was born March 24, 1825, in New-York, of Welsh parents. Early left to shift for himself, he was apprenticed to a shoemaker, and worked at that trade after coming to Buffalo in 1842. He began the study of law while pegging shoes; later he managed to take a classical course at Canandaigua, and was admitted to the bar at the age of 22. He became a memated in 1849. He then went to Mississippi. ber of the Buffalo firm of Cook & Daniels, which lasted until 1850, after which time he continued in business alone. He was elected to the Supreme Bench November 3, 1863, to fill a vacancy caused by the death of the Hon. James G. Hoyt, having filled the place by appointment of Gov. Horatio Seymour from October 9th. He was re- in 1863 was elected acting Mayor, and held elected in 1869, and again without opposition in 1877. He was appointed Associate Justice of the General Term, First Department, by Governor Dix in December, 1873, holding the office for two years. In 1880 he was reappointed to the same position by Governor Cornell. In 1886 he received the Republican nomination for Associate 1887 Judge of the Court of Appeals, but was defeated by Rufus W. Peckham. Judge Daniels has earned a very high reputation as a jurist, both with the bar and the people. He is an indefatigable worker. His term expires in 1891.

The Hon. George Barker.

This able and distinguished jurist was born in the town of Venice, Cayuga Co., Nov. 6, 1823. He obtained his education He was born of American parents of Scotch at the common and select schools near his father's home, and at the Aurora Academy, Cayuga Co. His legal studies he pursued in the office of David Wright of Auburn, and was admitted to the bar in that city in 1847. In January, 1848, he began practice in Fredonia, where he has since resided. Of this village he was president in 1853, 1857, and 1858. He was elected District Attorney in 1853 and again in 1862. He was also a member of the Constitutional Convention in 1867, and as a member of that body held a place on the important committees on the Judiciary and on the Legislature and its organization. In 1867 he was elected to the Supreme Court for the term of eight years, and at his re-election in 1875 he had no competitor, having been nominated by the conventions of both parties.

The Hon. Albert Haight.

One of the youngest as well as one of the soundest and most able of the Justices of the Supreme Court is Albert Haight. He was born at Ellicottville, Cattaraugus Co., Feb. 20, 1842, and his boyhood was spent on a farm near Aurora, this county. After admission to the bar, Nov. 18, 1863, at the early age of 21, he began the practice of his profession, continuing it until 1872, when he was elected County Judge of Erie County. Previous to this election, Mr. Haight had been for three years a member of the Board of Supervisors of the county, and a clerk of the Surrogate's Court for one year. He was elected County Judge at the age of 30, and four years later was elected to the bench of the Supreme Court.

The Hon. Henry A. Childs.

This much esteemed Justice was born at Carleton, Orleans County, July 17, 1836. He received a common school and academic education, and in 1857 began to study law with Judge B. L. Bessack of Albion. He was admitted to the bar four years later, and from that date until his election to the Supreme Court bench engaged in the practice of his profession. In 1865 he was elected District Attorney of Orleans County, and served for three terms. In 1874 he formed a partnership with Senator Pitts, and the firm continued one of the most successful of Western New-York, until Judge Childs took his place on the bench of the Supreme Court at the beginning of 1884, where he has since made an enviable reputation as a just and learned judge. He resides at Medina.

The Hon. L. L. Lewis.

For years before he became a Supreme Court Justice, the Hon. L. L. Lewis was one of the leaders of the Buffalo bar. He was born at Mentz, Cayuga County, this State, May 9, 1825; his ancestors were of Welsh descent, and his grandfather was one of the pioneers of Central New-York. He received a common-school education, and at 18 began the study of the law with Hulbert & Hall of Auburn, and finished with the distinguished firm of Seward & Blatchford of the same place. Admitted to the bar in 1848, he came at once to Buffalo and began practice. In 1852 a partnership was formed with Mr. C. O. Pool, which lasted three years. After brief association with Mr. Edwards and Mr. George Wadsworth, a partnership was formed with William H. Gurney, which lasted twelve years, during a part of which time Mr. A. G. Rice was a partner. In 1882 Mr. Lewis became associated with Mr. Adelbert Moot and Mr. George L. Lewis, his eldest son, under the name of Lewis, Moot & Lewis. Judge Lewis has served two terms in the State Senate, being first elected in 1869. He was elected a Supreme Court Justice in 1882. Long conspicuous for ability at the bar, he has given proof of judicial qualifications on the bench.

The Hon. Thomas Corlett.

The Isle of Man was the birthplace of Thomas Corlett, about the year 1826. When an infant his parents came to this country and settled at Attica, Wyoming County. His legal education was acquired in the office of the Hon. W. Riley Smith of Attica. He was admitted to practice in 1848 at the Buffalo General Term, and opened an office at Attica. A partnership was formed with Andrew J. Lorish, who had been a student in Mr. Corlett's office. This connection was dissolved in 1868, when Mr. Corlett came to Buffalo and became associated in practice with the Hon. Charles F. Tabor. The firm of Corlett & Tabor dissolved in 1874, and in 1878 that of Corlett & Hatch was formed, the junior partner being now the Hon. Edward W. Hatch of the Superior Court. In 1883 Mr. Corlett was elected a Justice of the Supreme Court, a merited honor after a successful professional career.

THE SUPERIOR COURT.

judiciary grew out of the Recorder's Court of the city of Buffalo, which was organized under an Act of the Legislature in 1839. Its origin was owing to the fact that the N this page are portraits of the Judges | Circuit Court, Oyer and Terminer, and of the several Courts (not Federal) General Sessions were inadequate to do the largest majority ever given to a Democrat. has been always occupied by judges of learning and ability.

> The Hon. Charles Beckwith. The present Presiding Judge of the Superior Court is the Hon. Charles Beckwith. He was born in Genesee County, this State, and in 1836, when but a child, was taken by his parents to Kalamazoo, Michigan. He saw a good deal of the toils and privations of frontier life. He prepared for college, entered Michigan University, and gradu-

Not long after, Mr. Beckwith came to Buffalo. In 1860 he was elected Alderman from the Fifth Ward and served four years. In politics he has always been a Democrat. He was twice President of the Council, and office for several months during the period of the memorable drafts and riots. In the fall of 1863 he was elected City Attorney, and held the office for one term. He was elected Judge of the Superior Court in the fall of 1877, becoming Chief Judge on the retirement of the Hon. James M. Smith in

where in 1852 he was admitted to the bar.

Judge Beckwith is one of the most scholarly men who have occupied the local bench, and is known as a safe counsellor and a careful judge. His opinions in General Term are exhaustive and thorough. He is the soul of courtesy at all times, and a universal favorite.

* The Hon. Robert C. Titus.

The Hon. Jacob Stern.

The Surrogate's Court of Erie County dates back to 1808, when the first Surrogate located in Buffalo. The Hon. Archibald S. Clark was appointed for an unlimited period by the Council of Appointment, under the first Constitution of the State, and served for the then Niagara County. The present incumbent of the office of Surrogate of Erie County, the Hon. Jacob Stern is one of the youngest men who has held that office. He was born in this city in 1851, and after attending the public schools entered the Surrogate's office under the late Jonathan Hascall, then Surrogate, He remained in the office a year and a half and then spent two years in the machine shop of David Bell as an apprentice. At the end of that time he re-entered the Surrogate's office as clerk. He was admitted to the bar in 1876, but remained in the Surrogate's office until 1880, when he resigned to engage in the practice of his profession. He was elected to his present position in 1883. He is a model Surrogate.

J. LANSING MOORE.

No Buffalonian has extended more substantial aid to the people of this city in their efforts to keep cool than Mr. J. Lansing Moore, the general manager of the Buffalo Ice Company. For a score of years he has been foremost in the business of supplying the demand for the greatest of hot-weather luxuries, and it is chiefly to his energy in seeking and developing new sources of supply that the public owe the splendid quality of the ice and the low prices for it which are enjoyed here.

Mr. Moore's ancestors on both sides were among the earliest colonists of Massachusetts and Connecticut, and they came to Onondaga County, this State, with oxteams and following blazed roads, at a day when white settlers were few and far between. Mr. Moore was born in Skaneateles, Onondaga County, N. Y., March 4, 1845, and during his boyhood worked on a farm and clerked in hardware and grocery stores. Later on he went to the oil region and from there came to Buffalo January 10, 1867, together with his wife and child, with the firm determination to cease playing the profitless role of a rolling stone. Here he first entered the employ of A. J. Briggs, who was engaged in the ice business, and remained with him four years in a subordinate posi- of Puritan descent. The town of Cicero, tion. qua enterprise has kept pace with the Assembly, and the stock carried by Mr. Otis at his pavilion on the grounds this

year is valued at about \$10,000. From time to time Mr. Otis has dipped into the publishing business, and some of his ventures have been very successful. Looking back over his thirty years' experience, he can point with pride to the fact that while at no time have his profits been enormous, yet his business has always yielded a fair income. This is particularly gratifying from the fact that during this entire term he has resolutely refused to deal in the sensational literature and the unwholesome works of fiction which are the chief dependence of many of the bookstores and news-depots of the day.

A life-long Methodist, and a tireless worker in the field, for 25 years Mr. Otis has been a Sunday-school superintendent, and for a still longer time one of the most active promoters of church extension. There are few Methodist Episcopal churches in Buffalo in the erection of which he has not had some part.

CYRUS K. PORTER.

One of the best known architects of the city is Cyrus Kinne Porter. Mr. Porter is he resolved to learn the trade of a joiner. with a partner, opened an office in Brant- August 9th. The party divided into three

soon after entered into partnership with H. to the farther station at Ottumwa. From

In this city he has designed more business blocks and more dwellings than could be enumerated in a column. The Coal and Iron Exchange and the Brayley house at the corner of Main and Tupper streets are fair examples of his skill in these directions. Mr. Porter's greatest successes have been in ecclesiastical architecture. The new Trinity Church on Delaware Avenue is justly regarded as a specimen of his best work.

Mr. Porter is now associated with his son under the firm name of Cyrus K. Porter & Son. Their place of business is in the American Block, at room No. 43.

SOAP MANUFACTURE.

A Great and Growing Trade Sprung from Small Beginnings.

DUFFALO ought to keep her hands D clean, for she turns out about 1,500, 000 pounds of soap every week. There are only three or four American cities where soap-making is a large industry, and Buffalo is one of them. As one of the leading soap-makers said the other day, "If a cake of soap has 'Buffalo' stamped Of the Buffalo booksellers of 30 years on it that is a great point in its favor all

Mr. Baker was assigned with the dictum of the famous astronomical photographer, De la Rue. At the moment of totality Mr. Baker insisted on violating exposure of the plate. In consequence his section of the party obtained much the best

In '71 Mr. Baker again came before the photographers with a novel effect. He illustrated the Philadelphia Photographer, this time with a photograph diametrically opposite in lighting to the Rembrandt, an effect, in its turn, original and greatly admired.

In the year '73 the National Photographic Association was to meet in a neighboring city, but was disappointed, as no building could be found there suitable for the purpose. No photographer was willing to assume the responsibility, until Mr. Baker came to the rescue. He invited the Association to Buffalo, hired the Pearl Street Kink for the exhibit, performed, unaided, the duties of local secretary, and, further, interested many prominent artists, who contributed papers on the æsthetics of photography. The record of the meetings remains a body of information and reference which photographers yet study. Mr. Baker's own paper, illustrated with stereoptican views prepared by himself, the illustrations were in demand.

> THE EXPRESS is indebted to Mr. Baker, not only for the lovely child's portrait shown herewith, but also for the zeal and energy with which he has completed the many portraits made purposely for the present Extra" Number.

> Besides the labors enumerated above, Mr. Baker has constantly labored with his pen for the advancement of photography. His writings, though generally in short papers, if collected would form a large volume most valuable for reference.

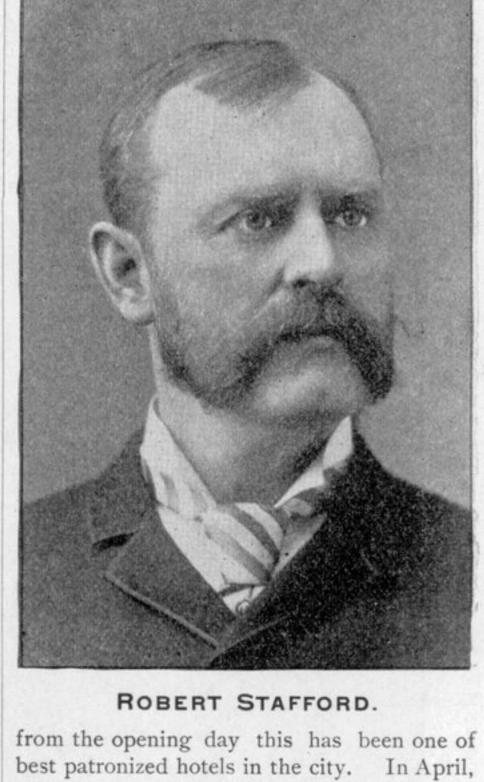

public, he is constantly on the lookout for novelties in his art. In the interest of his business he has made several trips across the ocean, where he has ransacked most of the art collections of the Old World to obtain valuable additions to his stock. It is said by travelers conversant with the subject that there is not a store in America, or even in Europe, so artistically arranged, or one which embodies so much of the beautiful in decorative art within its walls as that of Edward H. Jennings of Buffalo. When Henry Irving and Ellen Terry were in the city they visited the art rooms, as do most that it surpassed anything of the kind they had seen. The celebrated Whistler collection of fine etchings was then on exhibition, and Mr. Irving, who had seen the similarly named exhibition in London, pronounced it infer-

OLIVER S. GARRETSON.

OLIVER S. GARRETSON. High on the list of Buffalo's inventors engrave the name of Oliver S. Garretson. Born of a family which had displayed inventive genius for two successive generations, the son has eclipsed the records of his ancestors. Isaac Garretson, the grandfather, was the inventor of the first machine ever made to cut and head nails at one operation. The letters patent are still in the possession of the grandson. John G. Garretson was also an inventor of several important devices, and the subject

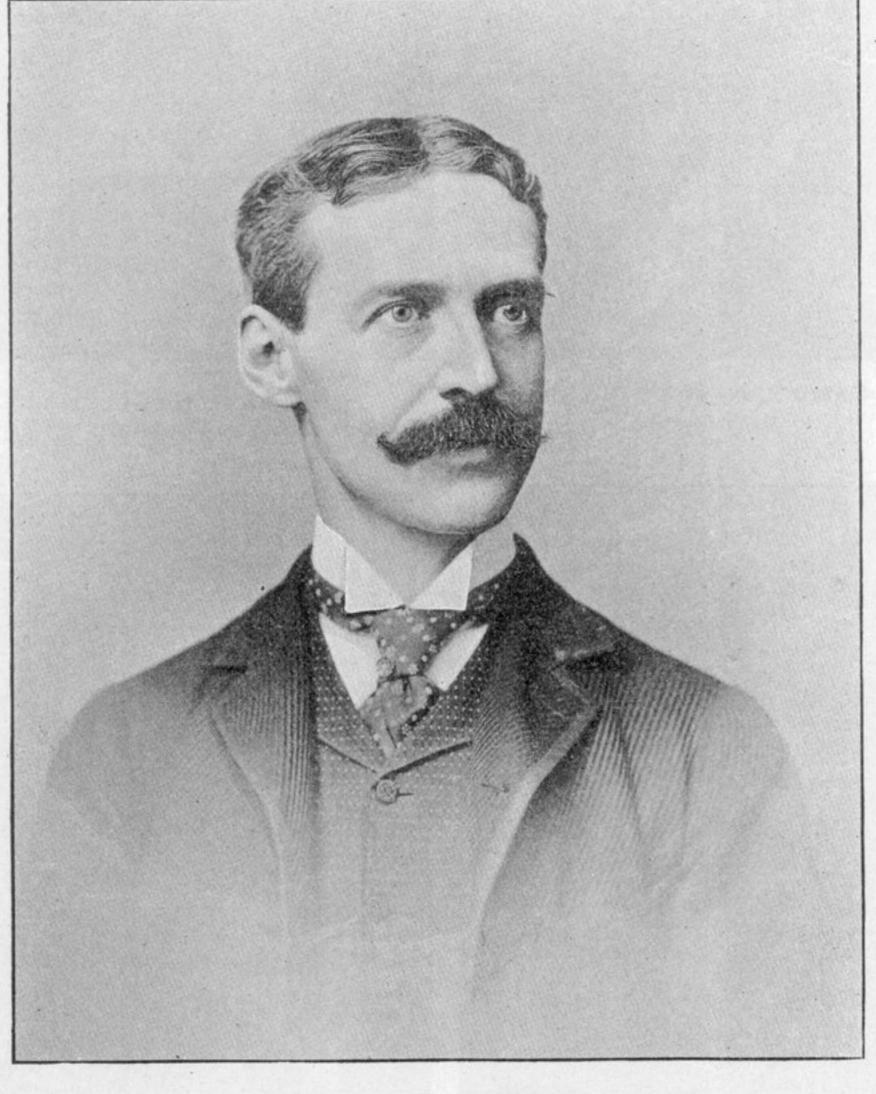

1884, he leased the Stafford House (then the Bonney House), refurnished and refitted it throughout, gave it his name, and shortly afterward sold the lease at a large advance. A few months later he likewise transferred to others the furniture and lease of the Mansion, and after a few months of retirement from the hotel business, in January, 1885, again appeared in his accustomed role, as the landlord of the Tifft House. On the 1st of May, 1886, the Tifft passed into other hands, and a month later Mr. Stafford, in company with Mr. H. P. Whittaker and Mr. W. J. Mann, under the firm-name of Stafford & Co., leased the structure known as the "Young" Men's Association Building," which wasremodelled and opened as a hotel known as-"The Richmond," February 23, 1887. The holocaust which swept this structure out of existence a few weeks later is still fresh in the public mind.

A few months later Messrs. Stafford and Whittaker again became the proprietors of the Mansion, which under their efficient management is enjoying a new lease of prosperity.

How Petroleum is Made Into Illuminating Oils.

ATLAS REFINING COMPANY

Abstruse Chemical Operations Are Every-Day Affairs.

By EDWIN R. LAWRENCE.

THE Atlas Refining Company has offices in the Coal & Iron Exchange, Nos. 255 to 259 Washington Street. Its refinery and works are located on Elk Street near Babcock, running back to an arm of Buffalo Creek, and covering about 60 acres, including the late annexation of the Lubricating Oil Company's property. It is one of the largest interests of the Standard Oil Company, and one of the most consequential in the city of Buffalo.

The discovery of petroleum in Pennsylvania lent a great impetus to the mining and manufacturing industries of this section of the country and added another important article to the list of exports from the United States. Though the use of refined oil for illuminating purposes has been in some measure suppressed of late years by the introduction of gas and electricity, still it remains the light of the villages and farming districts and of the poor man everywhere, and the manufacture of commercial products from petroleum is to-day one of the leading industries of the land.

Buffalo's list of manufactures would be incomplete without an oil refinery, and it has been the site of establishment for several, among which the Atlas Refinery stands preeminent for size, wealth, and quantity of output.

For several years the only petroleum product considered of value was kerosene. The volatile and the heavy products were either used as fuel or thrown away. As the profits of the business became lessened by competition, attempts were made to utilize these by-products, and the result has been that to-day there are several departments in the oil-refining business, each distinct in itself; that is, each department is a separ-

ate business. The Atlas Refining Company is one of three similar institutions in the country owned and controlled by the Standard Oil Company, which may be styled complete refineries, having works and appliances to manufacture all the direct products and all the by-products obtained by refining petroleum. It has one more department than the Brooklyn refinery-a car-shop, and when the industry of manufacturing compound lubricating oils from paraffine has been added to its list of departments the Buffalo works will be equally comprehensive with that of Cleveland.

Where the Oil Comes From.

Crude oil is received here by a pipe-line coming direct from the Bradford region. by a single pump, which forces the oil uphill | ticle. to the watershed in Cattaraugus County,

The oil is received by the National Transit Company and conducted to its storage is piped as fast as wanted to the crude storhave a capacity of 35,000 barrels.

first delivered to the refinery department for refining illuminating oils.

The Various Departments.

This process consists in filling huge boiler-like receptacles, holding several hundred barrels each, called stills, with crude oil, and firing them with coal substantially in the same way that water is heated in a From this distillation are secured crude

naphtha, distillates, and a heavy residuum. The crude naphtha is delivered to the Naphtha Department.

The distillate, by a further process of refining, which includes the use of steam and chemicals, is made into illuminating oils of all grades, which are shipped from Buffalo and exported to England, Germany, Australia, and the South Pacific Islands, and also distributed for home consumption in the Eastern and Western States.

The heavy residuum is delivered to the Paraffine Department.

The products resulting from refining are carried to their destination either in bulk (by tank-cars) or in packages (oak barrels holding 50 gallons each.) One department of the Atlas Works is the Car and Boiler Shop, where tank-line cars are built and tanks for distributing oil in bulk are made and repaired. Many of the Union Tank Line Company's cars are built here and a large proportion of their disabled cars are brought here for repairs.

Another important department is the Cooper Shop, where heavy oak barrels used as packages for kerosene, naphtha, and gasolene are manufactured by special machinery and distributed to the jobbers.

The sulphuric acid used in the processes of refining is restored at the Acid Works. This completes the list of six distinct departments comprised under the name "Atlas Refinery," each of which gives employment to scores of men and is a whole factory in itself. It is only by a perfect and thorough-going system of management that these various interests can be handled as one enterprise, and under a single-headed

It was the fortunate privilege of a reporter for The Express to be conducted through the works of the Atlas Refining Company a few days ago, and to witness the various interesting and highly-complicated processes which are there conducted, in which the secrets of chemistry play a large part, and not a few secrets are inviolably kept by the inventors thereof. A review of what was there disclosed may be better understood in connection with the The line is 85 miles long, and is operated fine engravings which accompany this ar-

The First Process.

The Atlas Works has 19 stills. A new "bench" of six stills, a condensing-box, and a tail-house were building when the retanks situated across the Buffalo Creek porter made his visit. The average capa-Railroad, on property adjoining the Atlas city of these stills is 600 barrels. They Company's possessions. These tanks are are cylindrical in shape, made of boilerfour in number, with a total capacity of iron, and lie on their sides. They are 135,000 barrels. From these tanks the oil bricked in, with an arched fire-box underneath. The stills are filled by steamage tanks of the Atlas Company, which pumps, of which a multitude are located in different quarters of the grounds. When From the storage tanks the petroleum is | filled, the fire is kindled and the stills are heated until the contents are thoroughly distilled. It takes from 60 hours to four

> The vapors arising from this combustion are conducted through worms of pipe submerged in running water. The water is held in a long box termed a "condensingbox," and the Atlas Company boasts the largest condensing-box in the world. Its capacity is 12.000 barrels of water. The vapors circulating through the worms are condensed into liquid and trickle out at the tail-house, where the streams are tested for gravity and directed to their proper destinaion. The first vapors to pass off from the stills form gasolene and naphtha. By an ingenious arrangement of stop-cocks and feedpipes, these distillates are separated from their successors and turned into the channels leading to the Naphtha Department.

days to empty a still.

Making Naphtha.

The Naphtha Department is supplied not only with the crude naphtha resulting from the process of distillation in the Atlas Refinery, but also with crude naphtha obtained from other refineries outside of Buffalo. In the process of distillation and refining with chemicals various grades of naphtha are produced. These refined products are designated gasolenes, of high gravity; deodorized stove naphthas; gas naphthas; and naphthas for various special manufacturing purposes. The first thing done to the naphtha when drawn from the storage-tank to which it has been sent by the expert at the tail-house, is to re-distill it in steam stills. These stills are covered with asbestos. The first product here is a gasolene which is used for making gas. It is exceedingly volatile, and dangerous to handle. The "second cut" furnishes the stove naphthas or stove gasolenes which have about 70 or 74 degrees gravity and are used extensively for culinary purposes.

Incidentally it may be said that the consumption of stove naphtha is increasing enormously. For use in summer in cookingstoves it is esteemed both an economy and

a luxury The residuum of the naphtha stills is benzine, gravity 63 degrees, which is sold principally in small interior towns for use in the manufacture of illuminating gas.

The Atlas Company has three naphtha stills of a total capacity of 1,600 barrels. The naphtha filling-house is separated from other parts of the works, and great care is exercised in handling the product. The crude naphtha brought from Olean in tankcars is unloaded here, and passes through all the processes that have been described.

Illuminating Oils.

To return to the petroleum stills: After

deodorize it and cleanse it from impurities. at once. Sulphuric acid and caustic soda are used about 5 per cent. of each. The acid removes a number of foreign substances from the oil by decomposing some and uniting with others. An admixture of soda precipdrawn off as sediment at the bottom.

'sludge' acid, and goes to the Acid Works, which will be referred to further on.

The result of this treatment in the agitators is to eliminate the offensive odor of crude petroleum and to render the oil transparent. To still further purify it, the oil is run from the agitators into "bleaching tanks" — shallow receptacles with glass skylights and clapper-doors in the roof that can be opened and shut at pleasure. Here the sun acts upon the fluid, and any impurities that may not have been precipitated in the agitators are permitted to settle to the

It is enviable reputation enjoyed by the Atlas

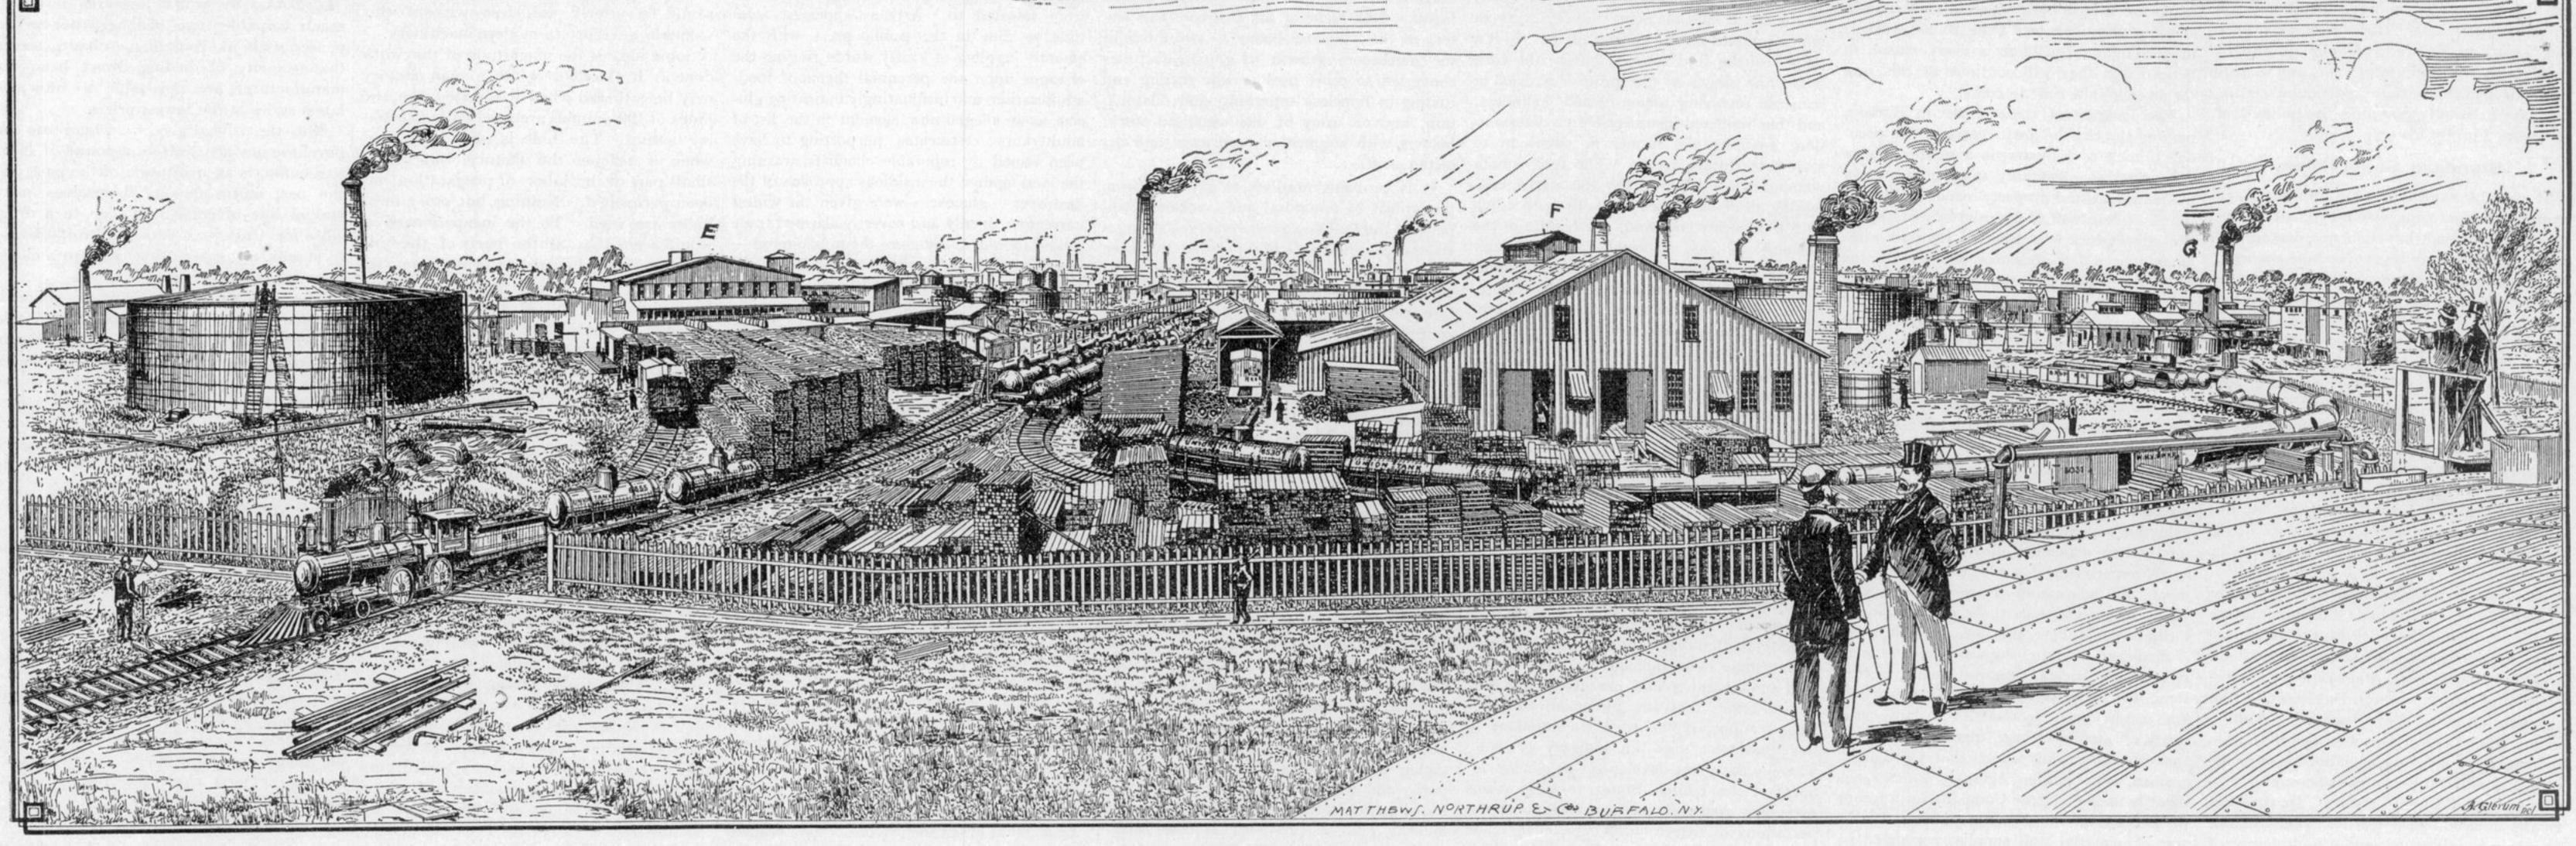

The Atlas Company has a wide reputation for uniformity and reliability, and this is not easy to sustain. The difficulties of obtaining uniformity may be realized when it is understood how unstable a base petro-The Acid Works are located in long leum is. Different fields of oil vary in The process is a secret one, and the be seen that the rules of refining can never knowledge of it brings a snug salary to the be exactly defined, but must vary with

Precautions Against Accident.

The dangers of oil-refining are greater than in ordinary business. Two things have constantly to be guarded against-explosions and fires. The special precautions Very little is allowed to go to waste about against fire in the building devoted to the an oil refinery, greasy and sloppy though manufacture of paraffine have been menthe business is. It has been shown how tioned. These are but a small part of the from Buffalo to all parts of the United tion. This alone is a great saving, for the successive distillates are utilized, preventive devices in use by the Atlas Re-

ciently to permit the oil to be drawn off at

whence gravity carries it the remainder of the distance. The line connects with other stract of the manifold operations which are the distance. The line connects with other stract of the manifold operations which are the distance of the d

en buildings, and there are plenty of powerful steam-pumps on the ground.

The Atlas Company has been generally fortunate in immunity from accidents. One tank has blown up, and not long ago a still exploded, killing a fireman who was wheeling a load of coal in front of it. Such accidents are painfully common in less carefully managed refineries.

Magnitude of the Business.

The Atlas Refining Company has been established here since 1882. It has grown every year since starting under the Standard's management, and still continues to grow. The Lubricating Oil Company's plant, adjoining on Elk Street, has but recently become annexed to the Atlas Works, and when in full operation the combined plant here will be one of the most complete of the Standard's interests.

The whole plant gives employment to from 400 to 600 men, most of whom have come to Buffalo in connection with the Atlas Company's business and have located here as permanent citizens. Many of the workmen are experts, possessed of more than average intelligence and ability, and earning larger salaries than are ordinarily paid. The Atlas Refining Company pays out every year for salaries to its employees about \$300,000, and for material bought in Buffalo about \$20,000 a month, making a total of about half a million annually disbursed in this city to its benefit. The company sells but about 5 per cent. of its products in Buffalo and vicinity, so that the material gain to Buffalo by the location of the Atlas Works here is no inconsiderable

Shipping.

One of the greatest advantages afforded by Buffalo, and the chief reason why this point was selected as a favorable location for an oil refinery, is its unexcelled shipping facilities. Shipping is done almost entirely by railroads, and the Atlas grounds are entered by a branch of the Buffalo Creek Railroad, giving it direct outlet upon the iron roadways of the continent. Most of the shipments are made in winter, the demand for oils being greatest then. Foreign shipments go on in summer as well as in winter. Shipments for domestic use are made generally in bulk, i. e., in tank-cars, to stations where barrels are filled and sent out to the trade, and thither empty barrels come to be replenished. When the barrels become worn out they are replaced by new, but an oaken oil-barrel has a long as well as a greasy life.

The shipments run from 20 to 80 car-loads a day, either in bulk or in barrel.

Fuel.

Next to the American Glucose Company's works on the Hamburg, the Atlas Refining Company's plant is the largest consumer of coal in the city of Buffalo. Under the 21 boilers during the last six months, 7,000 tons of bituminous coal were burned-at the rate of 14,000 tons a year. Besides what the boilers consume, about 900 or 1,000 tons a month are used in firing the stills, making a total consumption of about 30,000 tons annually. This is one of the greatest items of expense on the Atlas Company's books.

In addition to this mountain of coalequivalent to 50 train-loads of 30 twentyton cars each-a considerable amount of tar-still coke is mixed with slack coal and burned.

Naturally the employment of natural gas has suggested itself to Manager Southard, but in order not to disturb the supply for private consumers in the city it was not thought advisable to tap the pipes for manufacturing purposes until last July, when the consumption of the gas-fuel in private families was greatly reduced and the Natural-gas Company had a surplus crowding its mains. Then connections were made and two or three "benches" of stills were fired by this volatile sister of oil. It is needless to say that the fuel gives perfect satisfaction, and would be used continuously, no doubt, were it not for fear of robbing the citizens' hearths.

The Output.

The quality of oil differs according to the State or country to which it is sent. State laws vary, for one thing: New-York requires a high-grade white oil 150 degrees fire test; Indiana is even more particular; New-England is not so scrupulous about the high test, but calls for a fine color. The oil sent abroad is mostly a low-grade oil. Germany's test is 69 degrees by the Abel cup, equivalent to 115 degrees American test; England calls for 117 degrees; Australia and the South Pacific Islands want a higher test, about 130 degrees, and a canary color, and so on. The Atlas Refinery is all the time trying to elevate the grade of its oil and to cater more to domestic trade. Orders are received by the wires of the

National Transit Company and confirmed

The Management.

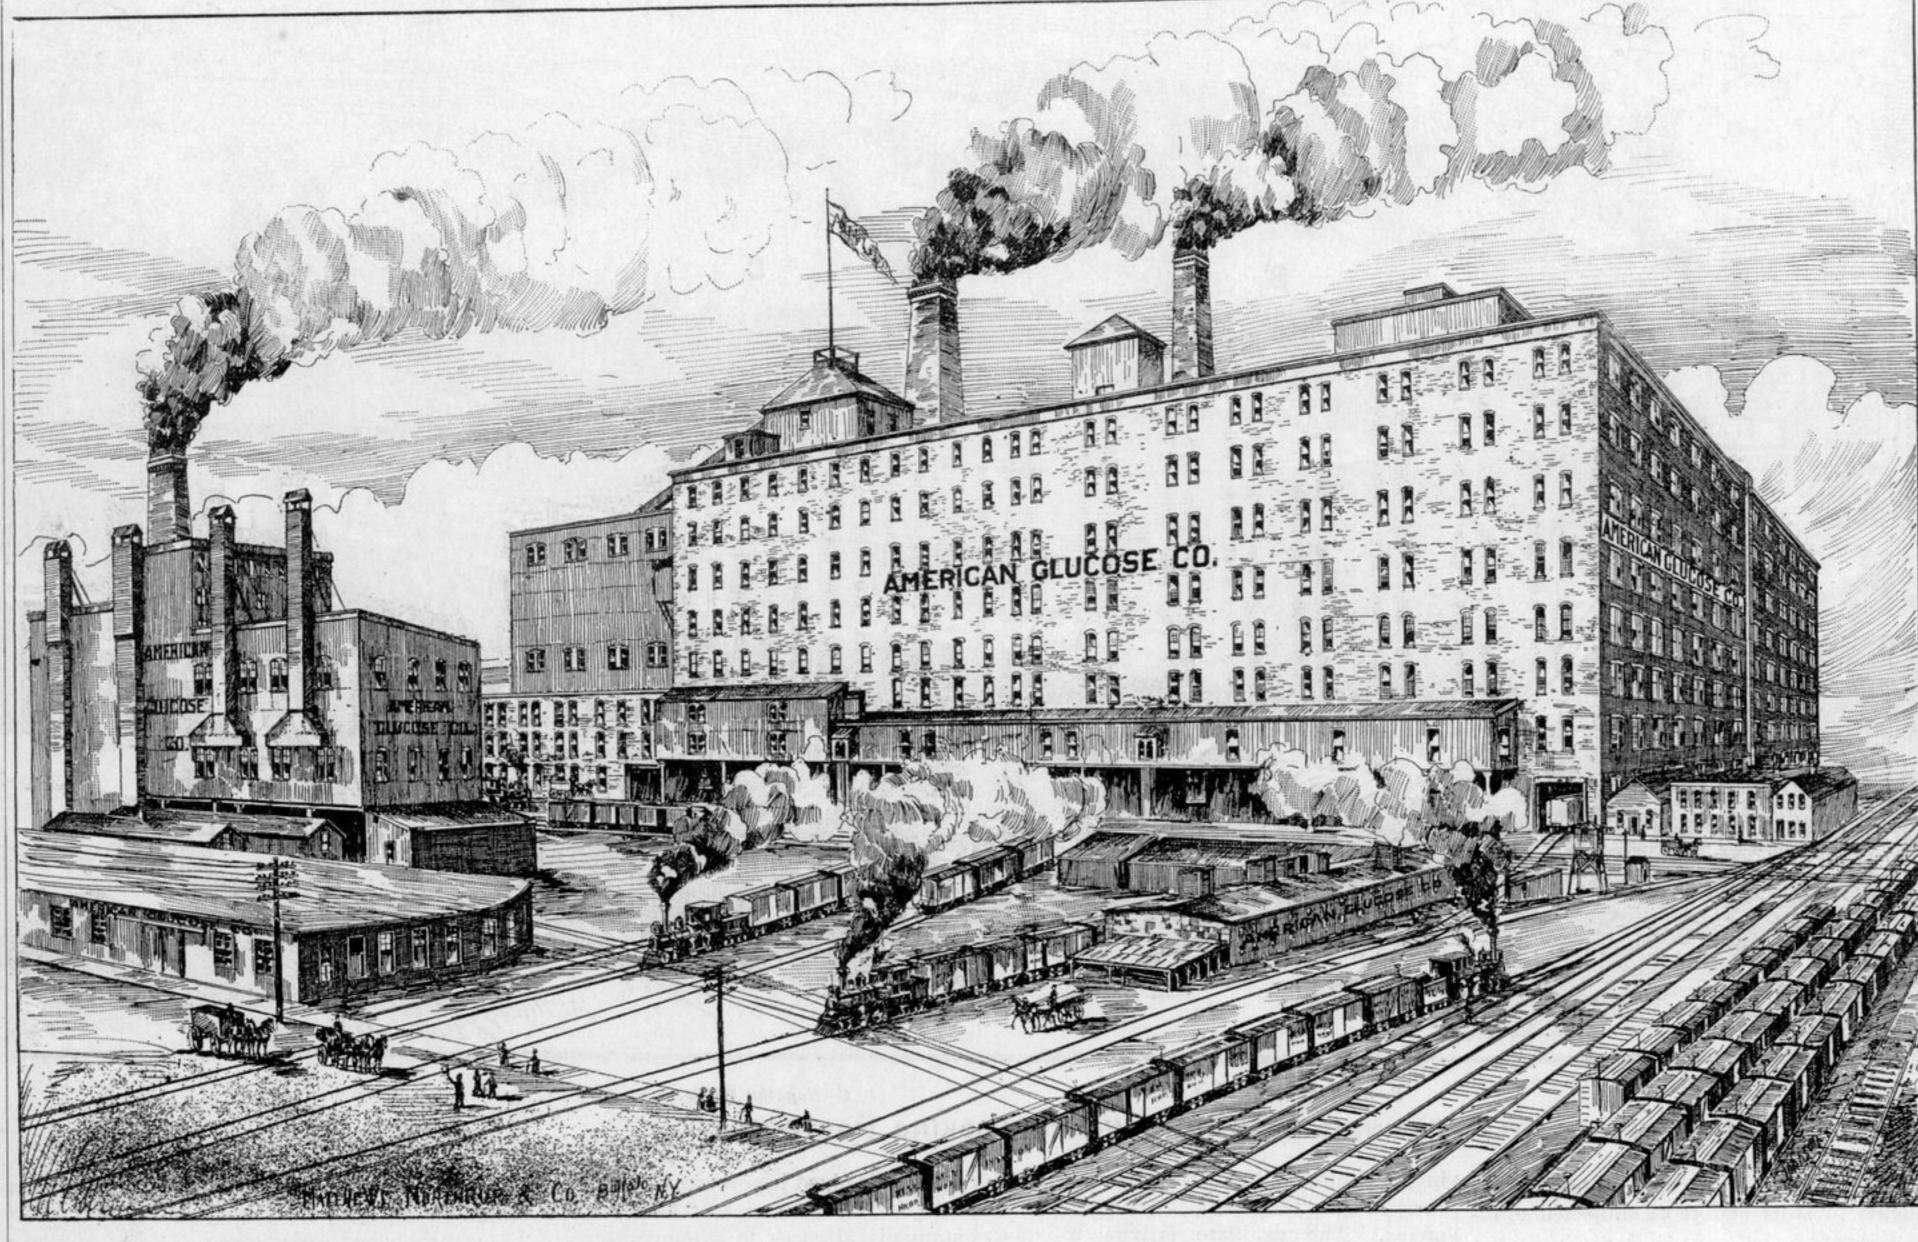

George F. Southard, the general manager of the Atlas Refining Company, is an experienced business man, of long acquaintance with coal, iron, and oil interests, and an untiring worker. To him much of the credit of the Buffalo refinery's high standing on the Standard's manufacturing records must be attributed. His aim is, as it ever has been, to secure a higher quality of product at a minimum of cost, and in this he modestly disclaims any particular credit, but says he is only pursuing the policy laid down for him by his employers.

Standard Supervision.

It may be said here that the Standard exercises a rigid supervision over all its interests, to the end that economy, exactitude, and excellence may be everywhere secured. Every refinery in the country is required to make up not only a semi-annual statement of its affairs, but to keep such a set of books that monthly, weekly, and even daily statements can be made of men employed, goods manufactured and sold, stock on hand, etc. Such statements are made and submitted by the foremen of each department every day to the General Manager, and by him telegraphed to the head office of the Man-Company in New-York City. Any day the directors may know exactly what is being

tories regularly, that the managers may see what is being done in other cities. If a re-Standard is looked upon as a formidable whereby a number of minor industries are in competitor.

the country.

BUILDINGS OF THE AMERICAN GLUCOSE COMPANY.

One of the Great and Typical Buffalo Enterprises.

Its History, Methods, Results, and

Future Outlook.

A LTHOUGH the manufacture of glucose A has been practiced on a large scale in European countries -- notably in Germany -- for nearly three-quarters of a century, yet Buffalo has to-day the largest and most complete establishment of its kind in the world. Our engraving gives a photographic view of the mammoth plant of the AMERICAN GLUCOSE COMPANY as seen from the tracks of the Lackawanna Railroad. The main building, eight stories in height, has, with its dependencies, a frontage of 225 feet on Scott Street, extending to the corner of Market, and a depth of 180 feet, reaching to the banks of the Hamburg Canal, while the feeddrying establishment, warehouses, machineshops, and other subordinate structures, occupy the south-side of Scott Street directly opposite the main property, and with their respective railroad tracks and freighting facilities stretch nearly to Perry Street, 300 feet or more to the southward.

Not in size or capacity alone are these works the most extensive of their kind in existence, but in quality of product as well, they are without a rival or a peer, domestic or foreign. "Buffalo Glucose" is an acknowledged standard of excellence and of values to the trade, and has made this city's name a familiar word in every State in the Union and in not a few of the great importing houses of Europe, South America, and Australia. From New-York to San Francisco, and from St. Paul to New-Orleans the "American Glucose Co., Buffalo, N. Y., is quoted daily in every centre of trade, and not an important railroad in the country but has hauled thousands of tons of the product of this colossal industry, or of its western

The history of the business in Buffalo would present a phenomenal instance of the possibilities that wait upon energy, enterprise, and skill, were the results accomplished not so obviously the natural outcome of unflaging industry and acute business sagacity. Fif teen years ago the extent of the infant enterprise was measured by a daily consumption of but 500 bushels of corn. Outside of New-York and a few other eastern cities its existence was hardly known, while locally it is doubtful if 500 people, aside from those directly interested, had even heard its name. From this small beginning it has attained proportions which within the past decade have at times involved a daily consumption of over 20,000 bushels of corn in this city alone; and although changing conditions of business and the steady westward movement of trade and population have necessitated the transfer of a portion of the company's capacity to western fields, yet the Scott-street works alone have been operated continuously at a capacity never less than 10,000 bushels of corn daily; and there is every reason to believe that they will continue at this rate for an indefinite time to come. The location of these works in Buffalo,

making the city the great centre of this peculiar branch of industry, is a matter replete with interest-pecuniary interest-to every business-man and property-owner within our gates. The extent of material benefits which the city derives can best be realized after examining a few statistics obtained by the EXPRESS from the Company's books. The daily consumption of corn, which is the raw material used, is, as already stated, 10,000 bushels, or in other words 20 carloads-equal to one full train-load-per day for 300 days in the year, or 3,000,000 bushels per annum. The annual product of the works, including Glucose, Syrups, Grape-sugar, and Animalfood products reaches 150,000,000 pounds. That the plant comprehends the investment ufacturers' Committee of the Standard of large capital goes without saying, and in estimating the actual cost its present cash valuation may be more than doubled to cover done at any concern under their control in the money expended during the years of costly experiment devoted to the develop-Not only is this accounting made for the ment and adaptation of the art-an item benefit of the head officials, but comparative whose magnitude only those engaged in the tables are furnished each of the manufac- business can fully appreciate. "Glucose, or Starch-Sugar, made from Indian corn, represents one distinct class of sugars, as cane-sugar does the other."

"In conclusion, then, the following facts appear as the result of the present investiga-

" First .- That the manufacture of sugar from starch is a long established industry, scientifically valuable and commercially important."

" Second .- That the processes which it employs at the present time are unobjectionable in their character, and leave the product uncontaminated."

"Third. - That the starch-sugar thus made and sent into commerce is of exceptional purity and uniformity of composition, and contains no injurious substances."

yet starch-sugar is in no way inferior to canesugar in healthfulness, there being no evidence before the committee that maize starchmented, has any deleterious effect upon the

system, even when taken in large quantities." ings accord with those of European scien- The paper upon the walls of a house in tists; and since the promulgation of the these days forms so important a part of above-quoted dicta (January, 1884,) attacks the interior finishings and constitutes so upon glucose in depreciation of its value as a great a factor in the general effect that food-product have been practically abanignorant or wilfully prejudiced. While it sustains its full share of the natural hostility of competing interests in the struggle for trade, yet the public at large - that supreme court of last resort - has pronounced in its favor in that eminently practical manner which affords the final and surest test of merit, and which would offset volumes of adverse criticism—it sustains the industry and consumes the product.

in Their Manufacture.

HOFFELD & CO. began the manu 1 . facture of leather belting in 1878. Gingras, who personally superintended the Formerly, French confections-in which business, there were but three workmen in soon take up the entire building.

The manufacture of belting is one of whether or not glucose is wholesome and its which the ordinary man knows little or nothing. He has a vague sort of a notion that such an article is made somewhere and that the manufacture consists While passing through the probationary mainly in tanning the hides employed in period which all candidates for public favor | the product. He does not think that belttireless detraction and virulent abuse, insti- and doubtless believes that power could be gated mainly by competitors who, descrying a transmitted very easily without it. All of formidable rival in the sugar market, sought | these ideas are fallacious. The manufacbuilding and use of machinery. Belting is absolutely necessary in many instances to many industries now immensely profitable would be utterly valueless without this valuable auxiliary to modern machinery.

> Some idea of the magnitude of the work may be gathered when it is stated that the hides of 100 animals are used daily in makbeen performed. Nothing but oak-tanned would seem that all the parts of the hide were capable of being used in the manufacture. Not so. A large portion is useless the hide there are three grades. The hides have to be trimmed and shaved until only the desirable portions remain. About one third of the hide is thus rendered unavailable. The part used for belting has to be stretched, and glossed, and cut into the requisite widths, placed in the presses, and subjected to a variety of operations before it comes out as the finished belting. Mr. Gingras has lately invented a new kind of belt which promises to supersede many of the older kinds. It is an ordinary leather belt covered with cotton. This firm also has a machine-shop at-

tached to the establishment, and all of their machinery is made and repaired on the spot. The waste is utilized in a variety of ways. The larger pieces are split and worked up into insoles, the pieces too small for this use are used for trunk handles, and the still smaller pieces are split and worked up into boot and shoe heels. Other pieces are made into carriage washers, of which Chairman, Prof. George F. Barker of the the firm is patentee, and the scraps are

used for fuel in the furnace. Hoffeld & Co. also deal in rubber belting

This company is to have an exhibit at the Fair and an opportunity will be given After exhaustive experiments, extending to all to see the various kinds of belting in

WALL PAPER.

No American Manufactory Thereof West of Buffalo.

THE art of interior decoration has long

I since gone beyond the feeble attempts

of the primitive paperhanger of a generation ago. The possibilities of wall paper as a beautifier have developed to such an extent that to-day we have artists who make a specialty of producing patterns and designs in this article alone. The old-time hanger, with the paste-brush and the stepladder, has been supplanted, and in his stead we have the dealer in wall paper, house decorations, and hangings, who takes the contract for furnishing a house throughout, and performs his work in a thoroughly artistic and pleasing manner. M. H. Birge, Sons & Co. have long made a specialty of doing this kind of work, and to-day they stand at the head of dealers "Fourth. - That, though having only about in decorative wall paper and furnishings in two thirds the sweetening power of cane-sugar, this city. The firm was founded in 1834, and since the day of its founding has made the decorative art in wall papers and hangings the main feature of its business. The sugar, either in its normal condition or fer- firm has long been before the public as a manufacturer of fine grades of wall paper and has ever been known as the leader in It is now generally known that these find- the business in this part of the country. great care must be exercised in securing doned, save from sources the most grossly appropriate and suitable designs and artistic coloring. This firm pays special attention to these points, and their goods are noted for these particular features.

> Birge, Sons & Co. recognized the fact some years ago, that to produce harmonious results in furnishing a room, the draperies and furniture must be chosen with special reference to the wall decorations. They therefore added the drapery department, which has now became a leading feature of the business, and where may be found the richest of curtains, portieres, and upholstery fabrics.

People have come to realize more and more that the best results in house furnishing are obtained when the entire work is planned and carried out by one mind - and any one who commits such work to the care of this firm is sure to secure an artistic

As manufacturers of wall paper the firm of M. H. Birge, Sons & Co. possess facilities which no other house has yet obtained. The individual taste or preference of the customer may desire a special color or design. Very well. It is at once manufactured from special patterns, and is in all respects in accordance with his order. All grades of choice decorations are dealt in, and there is no novelty known to the trade which is not in the stock.

The retail stock at Nos. 248 and 250 Main Street contains not only the products of the firm's own factory, but also a complete line of English and French paper hangings and decorations. There is also on hand an extensive line of fabrics for curtains, draperies, and upholstery work, second to none in the country. One of the evidence of the good work done by M. H. Birge, Sons & Co. is the fact that they have a large trade in other cities, and that some of the finest houses in the neighboring towns have been fitted up by them. At the present time they are filling contracts for customers in Utica, Syracuse, Auburn, Olean, Erie, and other cities. They send workmen to all parts of the country to carry out their designs for the decorating and furnishing of houses. They have engaged two sections in the Exposition Building, and during the International Fair will have one of them filled with a choice display of their most elegant wall paper, decorations, and fabrics, while in the other section will be demonstrated the process of hand-printing which is at present employed in the manufacture

The firm of M. H. Birge, Sons & Co. have a large establishment at 248 and 250 Main Street and their large well-lighted show rooms are said to be among the finest of this country. A cordial invitation to inspect their stock of paper hangings, draperies, and carved furniture is given to any and all who are interested in goods of this character, and those who avail themselves of this opportunity are sure to profit by so

To parties living in other cities who desire to have their houses decorated they send samples of papers made up in suitable combinations and submit estimates for work.

CLOAKS ONLY.

Sure to be Done Well.

THE semi-annual shopping tour to New-York City, which formerly consumed much valuable time, can hereafter be dispensed with, as Buffalo merchants, seeing the necessity of dealing direct from the manufacturer, are now able to offer the latest styles at the lowest prices.

Also the village grocery, where one can purchase any article from a pound of sugar to a coffin, is an institution of the past, and the best stores devote themselves to a special line of goods. We go to a drugstore for drugs, to a boot-store for boots it stands to reason that we visit a cloakstore for cloaks.

The only house in Buffalo which is devoted exclusively to cloaks, is the wellknown establishment of W. J. Nairn, conveniently situated in a handsome brick block at the corner of Main and Mohawk streets. Here ready-made garments are on exhibition, or you may select your own style and have your cloak, mantle, raglan, jacket, or whatever it may be made to

A large number of capable workmen are employed, and Mr. Nairn being conversant with every detail in the business, from the selection of the material to the pressing of the seams, is able to guarantee that only first-class work is sent out of his

An extensive stock of superior suitings, trimmings, etc., is always on hand, and the very best talent is employed in the designing and selection of late styles.

Already the new fall suits are beginning to appear on the streets; when you are ready for your cloak it would be well to patronize a reliable house.

Buffalo has 957 streets, of which only 92 As a levelling and regulating factor of the F. Chandler of Columbia College; Prof. and hose, and anything in that line can be are mentioned in the fashionable "Address Book."

CANTILEVER BRIDGE AT POUGHKEEPSIE, BUILDING BY UNION BRIDGE COMPANY.

UNION BRIDGE COMPANY. IN the year 1876 Gen. George S. Field and Mr. Edmund Hayes opened an office in Buffalo as engineers and bridge builders. Seven years ago their business had grown to such dimensions that they established the present plant to carry on bridge-building exclusively under the name Central Bridge Company

In 1884 the Union Bridge Company was formed by the consolidation of the Central Bridge Company, the Delaware Bridge Company of New-York, whose chief owner was Mr. Charles Macdonald, and the extensive bridge works at Athens, Penn., which were owned and operated by Mr. Maurice. The combination is now the largest bridgebuilding company in the world. The Buffalo plant, at the foot of Hamburg Street, is about eight acres in extent. It lies adjacent to the Union rolling-mills and blastfurnaces and is amply supplied with railroad tracks, switches, docks, and every other facility for receiving raw materials or shipping finished work. The equipment is as complete as the most modern devices can make it, and the force of 250 skilled workmen are given steady employment the year through. About 15,000 tons of finished work per year is the capacity of the works when not running over-time. The company likewise continue to operate the plant at Athens, Penn., which is equal in size, equipment, and working capacity to the one in this city. The entire force of employees at both places and in the field is about 2,000, and the aggregate business of the company

last year was nearly \$6,000,000. Probably the work of the Union Bridge Company which has given them the greatest amount of local reputation is the new Michigan Central cantilever bridge at Niagara Falls, which was constructed on new principles in bridge-building, and has proved a complete success as a substitute for suspension bridges where the span is

At the present time the company has under contract and in process of construction several works of great magnitude. Chief among these is the \$2,000,000 bridge at Hawkesbury, New South Wales, the contract for which was secured by Gen. Field in competition with the most celebrated bridge-builders of Europe. The accompanying illustration shows the bridge now building across the Hudson River at Poughkeepsie, which will be one of the most important and costly in America. It is a double-track railway bridge of five spans, two of 550 feet and three of 525 feet, besides 3,000 feet of trestle-work approaches, and is 212 feet above low-water mark at the The contract is for the entire work-foundations, masonry, and superstructure. The Union Bridge Company is the only concern in America which takes contracts of this kind.

Another long structure which the Union Bridge Company is now building is the Illinois Central bridge over the Ohio at Cairo. Two spans will be 525 feet each, seven spans 400 feet each, and two spans 250 feet each, the total cost of foundations, superstructure, masonry, and approaches being about \$2,500,000. Other large works now in hand are the Chicago & Northwestern bridge at Sioux City, Nebraska; a great bridge over the Missouri at Nebraska City; and the New-York, Providence & Boston Railroad bridge across the mouth of the Thames River at New-London, Connecticut, whose distinguishing feature is a 500-foot draw the longest in the world.

In addition to these great contracts, the company are likewise constructing a large number of smaller structures in every part of the United States, while samples of their work will be found on the railways of South America, Mexico, and Japan. Gen. Field and Mr. Macdonald have charge of the New-York office of the company, Mr. Maurice directs the operations at Athens, Penn., and Mr. Hayes represents the company in Buffalo.

STEAM BAKING.

How well the Modern World is Fe by Wholesale.

VISIT to the large steam bakery of A George Mugridge & Son reveals the extent of a commonplace, yet interesting industry. A four-story brick bnildin (60x150 feet in area) fitted with some of the finest machinery of its kind in use, is none too large for the purpose to which it is put.

Here a force of from 60 to 75 employees is busied in the various departments of baking and packing. A daily supply of 125 barrels of flour is only sufficient to meet the demands upon the bakery, while the daily expense of running such a vast establishment is \$750. The company's annual trade amounts to \$350,000. These figures give some idea of the magnitude of this enterprise, but they are more readily comprehended than those relating to the goods produced.

Two thousand lemon snaps are cut and put in pans per minute, while jumbles are turned out at the rate of 180,000 per hour. Seven million oyster-crackers are shipped every day. These are astonishing figures, it creases one's astonishment as he examines of the largest manufacturers of cement in the numberless ingenious contrivances for | the United States.

saving labor and increasing the speed of the work. The toothsome products and savory odors on the first floor are sufficient to give one the appetite of a starved street-gamin, and careful inspection of the entire establishment fails to reveal anything but the most absolute cleanliness and care. The very floors are smooth and shining, and some of the employees look as if they had just come out of the flour-barrel.

Such an industry as this is the outcome of long years of patient perseverance. It was in the year 1841 that the elder Mr. James Mugridge began business in Buffalo. He was a native of Ellsford, England, emigrated to Utica, and thence came to this else in the United States for grinding

Here he commenced business on a very modest scale, but fortune smiled on his new enterprise, and success rewarded his efforts. In 1850 he was succeeded by Mr. George Mugridge, who remained sole proprietor until 1863, when Mr. James A. Mugridge tions, which by former systems of grinding was taken into partnership and the present firm-name adopted.

Never have the prospects of the house been more promising than at the present trade alone is sufficient ground for honest pride. Five agents are kept constantly upon the road, and a large stable is needed for the delivery-horses in use at home. Packing-boxes are received by the carload from Indiana, and the packing department

But it is not merely business ability that | ceeding 170,000 barrels. brings business success—honesty and printhe community, for it would be ungenerous | plying the fuel for their immense boilers productions eventually gets so near to the expenses. hearts of the people.

The annually increasing output of their works is abundant proof of the meritorious quality of the cement produced by this Company, it having grown from 40,000 barrels in 1873 to 246,000 barrels in 1887.

The Buffalo Cement Company (limited) own 230 acres of land at Buffalo Plains, the greater portion of which is underlaid with cement rock. Upon their property the company have a fully equipped mill, with a capacity for grinding 1,500 lbs. of cement per day, and five warehouses, with storage room for 65,000 barrels.

The disintegrating mills in use by this company are unlike those in use anywhere cement, being the invention of the president

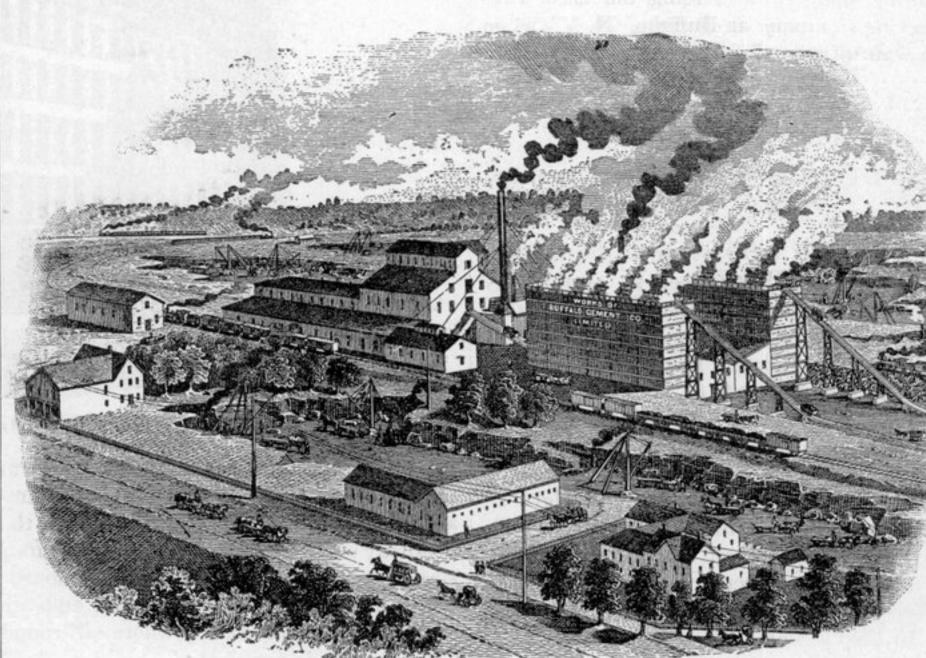

The uniform excellence of the quality of cement produced is in a great measure due to the thorough intermixture of all the burned material, utilizing the vitrified porwere valueless, and thus adding greatly to the value of the product.

The shipping facilities are unsurpassed, the Niagara Falls branch of the Erie Railtime. The export trade, extending to all the way having a branch track extending to all lake-ports and throughout the States of the warehouses and supplying all the cars Michigan, Ohio, New-York, and Pennsyl- required for the distribution of their provania, is large and growing, while the local duct to a trade embracing in its extent fully fifteen States.

BUFFALO CEMENT.

A Peculiar and Very Valuable Local Construction Product.

advantages of location, while others prosper because of the sagacious methods of the management or the excellence of the product. All three of these elements contribute to the success of the Buffalo Cement Company (limited).

In a recent article on the Geology of

Buffalo Prof. Julius Pohlman, the highest local authority, says: "Extending from Black Rock through the Northern part of the City of Buffalo is a limestone ridge, rising from 60 to 70 feet within the course of one mile. This ridge is formed of the rocks of water-lime, Onondaga, and corniferous limestone. The water-lime is really an impure limestone, a mixture of the clay of the Onondaga salt group and the succeeding limestone. It is a well-known fact that the celebrated English Portland cement is an artificial mixture of clay and lime. Here Mother Nature has performed the work, and we have a true cement rock, ready prepared, in proper proportions, in the waterlime group. At Buffalo Plains this limestone ridge approaches close to the surface, so that the rock can be easily and economically quarried for conversion into a mar-

ketable product." The manufacture of Hydraulic Cement within the City of Buffalo began in a very small way some 40 years ago, the product being used largely by the U. S. Government in the construction of the Buffalo breakwater; but the industry at that early date was of little consequence, and it was not until 1873 that the manufacture assumed any considerable importance. In 1877 it was very largely increased upon the organization of the Buffalo Cement Company (limited), with a capital stock of \$100,000, with Lewis J. Bennett as president and William W. Pierce as secretary and treasis true, but a visit to the bakery only in- urer, which company at once became one line.

Here in Buffalo, but One that Has Already Taken Firm Root.

THE firm of H. R. Kenyon & Co. came to this city from Chicago in April of the present year. It is seldom, in a city the size of Buffalo, that in the space of a few months a business is created which enables a new firm to take a place among the largest and oldest-established houses. Yet this is what H. R. Kenyon & Co. have done since last April, and to-day the firm is enjoying a patronage which in many respects is more satisfactory than that possessed by the older dealers. One of the features of this establishment is its manner of treating customers. Strict instructions are given most politeness and courtesy to every one who enters the store. It matters not if a person goes in simply to gratify his curiosity, and with no intention of purchasing anything, he is shown the goods he wishes to see and in every respect is accorded courteous and respectful treatment. The success of the firm since its establishment here last spring has been such as to assure the proprietor of his wisdom in locating in Buffalo. The large and constantly increasing number of customers demonstrates that the treatment they have received both in regard to courtesy and honorable dealing has convinced the public that it can serve its own best interests by trading with this firm. The coming season will witness an en-

EXTENSIVE INDUSTRIES.

Two of Them Have Been Newly Located at East Buffalo.

THIS is pre-eminently the age of applied I mechanics. The manufacture of machinery is one of the most important industries of the country, and many communities have obtained the larger share of their prosperity by reason of the maintenance of machinery works in their midst. One of the largest enterprises of this nature to be found anywhere, and one that contributes largely to the industrial prosperity of this city, is the manufactory conducted by the firm of Farrar & Trefts. This firm is one of the first in the country in the manufacture of Boilers of all classes, Marine Machinery and Propeller-wheels, Steam Engines, Iron and Brass Castings, and appliances of all kinds used in the mechanical operations connected with the industrial occupations

The reputation of the house is now very widely extended. The growth of its business and the increase in the output have followed as a necessary sequence from the realization by its patrons of the superior excellence of the work turned out. The business was founded in 1864. The firm was composed of Messrs. Farrar, Trefts & Knight, under which title it was known until 1869, when Theodore C. Knight retired and the name of the firm was changed to its present form.

sources were comparatively limited and the facilities which it enjoyed for the rapid production of work were greatly inferior to ute in greater proportion to the growth and those now possessed. Year by year, however, the business developed, resources and iron foundry of the East Buffalo Iron facilities were enlarged, the plant was in- Works. Rood & Brown.

company or of some manufacturer who

contracts to supply the company with what-

The manufacture of car wheels has grown

to be one of the great industries of the

country, and large factories employing hun-

dreds of workmen are devoted to their pro-

duction alone. Buffalo is one of the great-

is no reason why it should not become the

kinds. Already shops for the manufacture

have been built, and thousands of men now

established. It is but a part of the law of

natural selection that large quantities of rail-

way rolling stock should be manufactured

here and that Buffalo should become the cen-

ter for the production of articles of this nat-

ure. For a long time car wheels have been

made in this city, and the special facilities

enjoyed by the manufacturers in regard to

proximity to the iron and coal mines and

the ease of making shipments have caused

the industry to prosper more than its pro-

Among the firms which have lately en-

gaged in this manufacture is that of Rood

& Brown. Both of the members of the

firm are well-known business-men, and the

prestige lent to any enterprise to which the

ndorsement of their names is given is almost

sufficient to carry it to success regardless

of other asssistance. Messrs. Rood &

Brown have been engaged in the business

but a comparatively short time, yet they

have already demonstrated that their works

are destined to have an output which shall

be larger than that of any other concern of

the kind in this portion of the State. Their

product consists of wheels of all kinds, from

the small light ones used by the flat car to

the ponderous supporters of the drawing-

room car. Every species of wheel is made,

and there is no kind of truck used on cars,

engines, or tenders which is not provided

for. The works are extensive, and many

additions have been made to the plant since

the beginning of the industry. The firm

gives employment to a large force of men,

and has the very best facilities for turning

capacity for over 150 wheels per day. The

history of the wheels made by this firm is

very flattering. Several of the leading rail-

roads have made a series of systematic and

exhaustive tests of the various wheels em-

ployed, and in every instance where the

wheels of Rood & Brown have been sub-

jected to critical examination they have

been found to be perfectly satisfactory in

every particular. Several large purchasers

among the companies have reported that

now in use. The iron used at the works is

of the first quality, only the best charcoal

A R. C. J. DRESCHER, the senior IVI partner of the leading paper-box factory in this city, began business in 1867, occupying the upper floors of Nos. 188 and 190 Main Street. Here, by steady industry and careful attention to details, he built up a flourishing business, and in 1877 removed to his present spacious factory, Nos. 13, 15, and 17 Terrace. His success has continued, and to-day, with an active and ambitious son, he stands at the head of a large and growing industry. A six-story building, with an area of 40×60 feet, is needed to accommodate the trade, which includes the manufacture of all kinds of paper-boxes, as well as a complete line of strawboard tubes, so extensively used by publishing houses in mailing sheet music, maps, drawings, chromos, and engravings. The tubes in which this Souvenir Number of THE EXPRESS is mailed are from this

ceding year. This steady accretion of trade has been the natural result of liberal advertising, square and truthful dealing, strict integrity, and careful attention to business on the part of the proprietors. The public has learned that the proclamations of J. N. Adam & Co. are trustworthy, that they will do precisely as they agree, that goods are guaranteed in quality, and exchanges or rebates will be made in cases where satisfaction has not been given. These methods of dealing have secured the confidence of the public, and by adhering strictly to cash policy and one-price rules the firm has maintained good faith on both sides, and has no bad debts to collect and no misrepresented sales to correct. The growth in popular favor is steady and sure. Friends once gained are kept. The clerks are always busy. Since Friday was made a special bargain day the store is crowded on that day almost to suffocation. Yet it was never intended to make these bargains interfere with regular sales, and the business of the remainder of the week does not seem to be affected in consequence. The record made by the firm of J. N.

Adam & Co. is one which they may well contemplate with pride, and the community may well wish itself the possessor and patron of many stores as prudently and enterprisingly managed as this.

for 52 years, and passes the second quarter vantageously situated in proximity to the pole in the century track with colors flying, | hemlock forests of New-York and Pennsylboasting a factory and sales warehouse of its own, six stories in height, containing nearly two acres of floorage, and giving regular employment to 100 skilled cabinetmakers, no better guaranty is needed that its products are trustworthy and its business methods honorable.

The historic furniture establishment Hersee & Co. was founded in 1836 by the late Thompson Hersee and the late Benjamin Timmerman, their original store and shop standing on the present site of the secure more room, and the structure now prices.

One of the first objects to attract the attention of the sight-seeing tourist as he emerges from the New-York Central depot and starts on an inspection of the city is the massive brick structure at the corner of doorway of which appears the sign "Root The forges manufactured by the Star & Keating." The vastness of the building

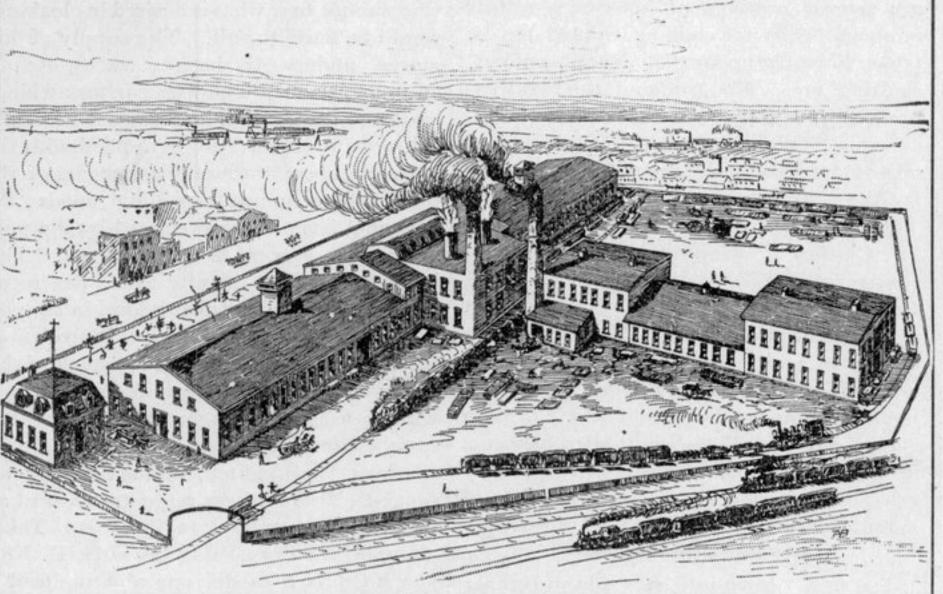

The history of the house begins in 1864,

of the tract now known as the West Shore

134, five stories high, with just enough ornamentation to relieve the plainness of the facade without destroying the impression of solidity.

The great tanneries of the firm, from which the warehouse receives its supplies, are located at Olean, N.Y., and Port Alle-TITHEN a furniture house has held a gany, Penn., the latter being the largest VV leading place in the race of business under one roof in the world. Both are advania, in a region where the railroad facilities are excellent and well-paid labor is content to leave well enough alone. All the improved machinery and every available modern device for the rapid transformation of hides into sole leather is found in these tanneries, which give employment to 200 men and have an aggregate capacity of

1,300 sides per day. Both members of the firm give their exclusive attention to the business, and a ready demand is found in the American Yerxa grocery-house. The business grew and European markets for the entire outapace, and in 1853 it became necessary to put of their tanneries at the highest ruling

EAST BUFFALO IRON WORKS.

"ON 'CHANGE."

A Brief History of the Buffalo Merchants' Exchange.

THIS popular institution, incorporated in 1882, superseded, commercially speaking, the Buffalo Board of Trade (constituted 1844 and incorporated 1857), and occupies the entire fourth floor of the building of that corporation on West Seneca St., covering a space 132x60 feet. [See page 9. The handsome main chamber, or 'Change, wainscotted and painted in unique style, is 70 feet long, 53 feet wide, 23 feet high, with a ladies' gallery over the east end facing the president's platform. The committees', secretary's, freight bureau, and reading-rooms, lavatory, etc., are on this floor, while the Grain-inspection Department is on the seventh.

The plan of this association has a wide scope, but its principal objects are to inculcate just and equitable principles in trade to establish and maintain uniformity in commercial usages; to acquire, preserve, and disseminate valuable business information, and to adjust controversies and misunderstandings between its members.

The Transportation and the Real-estate and General-information Committees are of special value to our merchants and citizens the former looking after all matters affecting R.R. freight and discriminations against Buffalo as well as canal and lake transportation; while the latter's duties are to obtain and give such information as may be desired by any party relating to the advantages of the city of Buffalo for manufacturing and general business purposes, and consider and report upon all matters appertaining to the interests of the city relative to taxation, sewerage, gas and water supply, the public schools, telephone and telegraphic service, public buildings, railroads, streets, manufactories, and other topics which bear upon its commercial and industrial welfare.

assets \$69,043.70; liabilities none! On the membership roll will be found the names of the most active, progressive, energetic, and representative men of the city, comprising merchants, bankers, coal and iron operators, lumber and live-stock dealers, shippers and forwarders, elevator proprietors, vessel builders, owners and brokers, manufacturers, lawyers, insurance agents, railroad and propeller line managers and officials, petroleum producers and refiners, newspaper proprietors, printers and stationers, real-estate men, builders, contractors, salt, lime, and plaster dealers, etc.

STRICTLY BUSINESS.

The Business Men's Association of the City of Buffalo.

THIS association was organized some-I thing over a year ago by a number of our enterprising and wide-awake businessmen. Its aim and object is to collect useful information regarding Buffalo as a point at which to carry on manufacturing, commercial, or mercantile business; to impart this information to the outside public; to bring to general notice the beauties and healthfulness of this location as a place of residence; and to utilize its unlimited water privileges.

This Association has in the last year printed and circulated over 300,000 circulars calling attention to these advantages possessed by Buffalo, and inviting capital and labor to locate here. The Association has also assisted in bringing about several municipal reforms, and has always lent its efforts to and used its influence for the welfare and advancement of the city.

The Association solicits correspondence from corporations, companies, and individuals contemplating a change in location, and from those wishing any information in regard to Buffalo, or any branch of business in Buffalo. Full information will be promptly furnished gratis in response to all proper business applications. Citizens or strangers are cordially invited to visit the rooms of the Association, in the Stafford Block, Pearl Street.

Communications should be addressed to the secretary, Room 5, Stafford Block.

JAMES H. SMITH, Pres't. T. H. GATCHELL, Sec'y.

BRYANT & STRATTON.

On January 1, 1888, the membership roll | The Pioneer Business School in the City of Buffalo.

> MOST reliable, thoroughly sound, and A practical educational institution is the Bryant & Stratton Buffalo Business College. It was established in 1854, and was the first school which introduced a thorough course of business training in Buffalo. At that time few business men had ever heard or thought of such a thing as a school for business training, and many looked upon the new undertaking as an experiment of very doubtful issue. But Messrs. Bryant & Stratton were men of sound business principles and indomitable energy, who had thoroughly studied the situation, and were convinced that the time had come for the inauguration of a new department of education in the line of training for active business life.

> The result proved their judgment to be correct. The efficient work of their graduates, who readily found employment as book-keepers and business managers, in all departments of trade, many being rapidly advanced even to a partnership in the business, convinced the public of the practicability of such instruction and training. The proprietors soon established an honorable record among the educational institutions of the country. The best talent to be found has always been secured in the teachers of

This school has been the principal factor during the past thirty-four years in shaping the course of the young men of Buffalo and the surrounding country, and fitting them in the best possible manner for business positions. A majority of the middle-aged business men of the city are its graduates, and there is scarcely a firm in which may not be found from one to half a dozen persons who have been its students occupying responsible positions. In all parts of the country, from the Atlantic to the Pacific, successful men in the various commercial pursuits. Many of them are retired capitalists, living upon the wealth they rapidly accumulated by reason of their superior

PEN, INK, PAPER.

Where to Find the Biggest Stock of Business Stationery.

MONG the most prominent and popu-A lar business houses in Buffalo is that of Adams & White, wholesale and retail stationers, printers, binders, and blankbook manufacturers, who occupy the premises Nos. 209 and 211 Main Street.

It was in half of this store that the firm of Young, Lockwood & Co. was established In 1865 Mr. John C. Adams enin 1859. tered their employ as clerk and continued in that capacity till 1872, when he became one of the firm. In 1885 Mr. Adams, in company with Mr. J. Herbert White, who had also been in the employ of Young, Lockwood & Co. for several years, organized the present firm, and succeeded to the business of the old firm.

Both Mr. Adams and Mr. White are young men of energy and ability, and under their straightforward management the business has increased more than at any time in its previous history. They occupy a large building, but a glance through their 1834. establishment will show that they must have more room before long. The basement is completely filled with the firm's stock of ink, which comprises all the leading varieties. The entire first floor is used as a sales-room, and is packed full of office stationery of every description, blankbooks, and all those materials which delight the tidy bookkeeper's heart. On the second floor are the stock store-rooms and the noisy printing-presses, whose incessant rattle gives evidence of many busy hands on the floor above, where the composingrooms are located. The entire fourth floor is occupied by the skilled workmen and the machinery required in the production of the superior quality of blank-books which this firm has long had the reputation of

Altogether, about 50 employees are kept busy. One reason for this firm's marked success has been that their employees are skilled workmen. Many of them have been with this firm and its predecessor since boyhood, which speaks well both for them and for their employers.

Good work has made a name for the firm of Adams & White, and their business keeps right on growing. They now have the largest stock of office stationery in Western New-York. Both members of the firm were born and brought up in Erie County, and are well known in Buffalo, where their method of doing business has won them a host of friends and patrons.

FIRE BRICK.

Long-Established and Highly Successful Buffalo Industry.

THE house of Hall & Sons has been wellknown among the leading fire-brick manufacturers of America for over forty years, the original firm of A. Hall & Sons having been founded at Perth Amboy, N.J., A Beautiful Art which Has Reach in 1846. Twenty years later, in 1866, the Buffalo branch was established by Mr. Edward J. Hall, who in 1881 became sole proprietor of the business. This firm have established a reputation for making the best quality of brick only, and it is acknowledged by consumers that no better brick are made in America, and that they are equal to the best imported Scotch brick. In Canada Hall & Sons' brick commands

better prices than the Scotch brick. Four acres of land at Black Rock, with large and commodious brick buildings, two fine kilns, and a spacious storage shed, furnish ample room and excellent facilities for the business carried on. The machinery is of the most approved stamp, and the works find constant employment for thirty men. A large stock is constantly kept on hand, including all shapes and sizes of the regular standard 9-inch fire brick, cupola brick, and blast-furnace blocks. All sizes of square fire-tiles are made to order, and great success has been achieved in this branch of the business, while an excellent line of locomotive brick and 12-inch tile for bakers' ovens is furnished.

A specialty of this house is the manufacture of brick for special purposes. Considerable work has been done in this line for the United States Government. Crucibles and test-tubes for use in assaying were furnished to the Government, and the officials who used them speak most highly of the work of this firm.

All fire brick are re-pressed, thus securing an even surface and uniform thickness, greatly facilitating the laying of the brick. The Perth Amboy terra cotta, so generally used, is furnished by Hall & Sons, who hold the agency for Buffalo and Western New-York. All the terra cotta for the new and beautiful Iroquois Hotel is furnished by this house, and so promptly was the

order filled that not one moment's delay

has been caused.

Not only do Hall & Sons keep abreast of all improvements in their line, but they are continually making experiments in new branches of the business, and introducing improvements in the machinery employed.

ART AND LITERATURE. Buffalo is not altogether an industrial city

A NOTABLE ANNIVERSARY.

Mr. and Mrs. John H. Bayley of 1401 Main Street, who celebrated their sixty-fifth wedding anniversary last February, are among Buffalo's oldest and most respected innab-

They came to this city October 4th, 1833, from Newbury, Vermont, where they were born in 1802, and married February 27, 1823. Canal on a line-boat, called "The Young Lion of the West." The journey from Troy occupied seven days and nights; or as many days as it takes hours now. The trip did not seem slow in those days, and was made with pleasure and comfort, and upon arriving at Buffalo the party of about one hundred felt loath to separate.

Mr. and Mrs. Bayley found Buffalo a city of but 13,000 inhabitants. All the buildings were below LaFayette Square, with very few exceptions. The Granite Block above Seneca Street was then the largest building. The front was built of cut granite, and was constructed so poorly at first that one morning soon after its completion i fell with a crash through the side-walk into the vaults belowkilling a little girl. But it was immediately rebuilt, and stands to-day. The next large building was the Kremlin Block, erected in

The year of Mr. Bayley's arrival there were forty-eight ships and vessels on the lake used for passenger and freight traffic - merchandise of every description was carried

west in exchange for grain and iron-ore. Mr. Bayley was engaged in ship-building, which was the main business at that time, and assisted in building the first steamboat that was launched in Buffalo harbor. It was named the "Daniei Webster." Mr. Bayley was afterwards canal inspector, for a few years was employed by the Niagara Railroad.

by Thornton & Chester. built the sleds that conveyed the iron from Altman, Leonard Dodge, George W. Pat-Franklin, New Hampshire, to Boston of which the first railroad of any description was constructed in the United States. The late Mrs. Thomas Thornton was Mr. Bayley's sister. DISTUBBLE OF MANAGED RECORDER GOULD COUPLER CO.

THE ONLY SELF OPENING HEAD, * BUFFALO, No. 18 and Gravity Lock.

CHARLES A. GOULD.

Prominent among the names of our rising business-men is that of Mr. Charles A. Gould, proprietor of the Buffalo Steam Forge. He was born near Batavia, N.Y., in 1849, and in 1865 made Buffalo his permanent residence. He was engaged for a time in the grain business with Henry C. Rew, now one of the millionaires of Chicago, and afterwards with W. C. & G. W Sweet. In 1870 he entered the employ of W. B. Sirret & Co., and held responsible positions with that firm until 1878. In the spring of 1879 he was appointed Deputy Postmaster under John M. Bedford, and in June, 1881, he was made Collector of Customs for this port by President Garfield which position he ably filled until June 1886, when President Cleveland appointed the present incumbent.

In January, 1885, he purchased the interest of the late Henry Childs in the Buffalo Steam Forge on Childs Street, east of the Ohio-street Bridge, and with Mr. Henry B. Stimson formed the firm of Gould & Stimson. In November, 1887, the firm was dissolved by mutual consent, Mr. Gould becoming sole proprietor, with offices at 24 and 26 Hayen Building.

In addition to his active business life, Mr. Gould has been for many years one of the most prominent local Republican leaders. He was Chairman of the County Committee for several years, and conducted the campaign of 1880, one of the most hotly contested in this county. He has also been prominent in mutual benefit societies, and for several years held the Grand Presidency of the Empire Order of Mutual Aid, and was honored by the Presidency of the Fraternal Congress of the various mutual insurance societies of the State in 1885 and again in 1886.

Of late years he has given his attention to the building up of the business of the Buffalo Steam Forge, which now has an enviable reputation among the railroads of this section of the country for superior forgings. The product includes all forg-

A specialty has been made of coupling links and pins, of which it is the sole manufactory under patent in this State. In these articles alone, a large trade has been developed.

The necessity for better facilities and a more advantageous location induced Mr. Gould to purchase a large section of property on Austin Street, Black Rock, on the line of the N. Y. C. & H. R. R. R., and he has now in process of erection at that point one of the most complete forges in the country. The buildings consist of the Forge proper 80 x 209 ft.; a Link and Pin Department, 40 x 50; Machine Shop and Engine Room, 40 x 50; with buildings for scrap iron, sand, and fire brick, barn, and offices. Tracks will connect the Forge with the main line of the New-York Central, affording ample shipping facilities.

facture of these couplers will constitute a very important branch of the business, and doubtless a malleable iron plant will soon be added to the Forge.

ANTI-FRICTION.

A Big Buffalo Business that is Done in Small Things.

THE Niagara Machine Company has its office and works at Kensington Station, N. Y., L. E. & W. R. R., Buffalo. This company was incorporated in 1886 for the manufacture, especially, of steel balls for anti-friction bearings and other antifriction devices. The manufacture of a sphere of hardened steel, with a fine polished surface, accurate within a fraction of a thousandth of an inch, is in itself an important art, and when to the production of these spheres in enormous quantities is added the manufacture of an anti-friction bearing for various purposes which will run absolutely without lubrication of any kind, some idea may be formed of the

nicety and importance of the work done. The Niagara Machine Company turn out many millions of steel balls annually, which are sold in enormous quantities to the bicycle manufacturers of the United States and England. Every high-grade bicycle manufactured requires one hundred or more of these balls to complete its bearings, so that the annual consumption in that branch of manufacture alone reaches far into the millions. The company has lately put upon the market a line of ballbearing casters for trunks, furniture, pianos, trucks, etc., all equipped with polished steel balls. They are also about to introduce a line of anti-friction carriage axles which will render it possible to run a carriage or wagon for years without the slightest lubrication and without perceptible wear. This would seem like a stretch of the imagination, were it not for the fact that years of careful experiment and thorough test in their own factory have demonstrated beyond doubt the possibility of doing away entirely with the friction of a bearing. This bearing can also be applied to light and heavy machinery of all kinds, line-shafting, loose pulleys, etc., and in fact wherever, in this world, the element of friction is found to a troublesome extent these gentlemen appear to be on hand to eliminate it.

The office and works of the company are located at Kensington, one of the leading manufacturing suburbs of Buffalo on the Falls Branch of the New-York, Lake Erie & Western Railroad, about four miles from the heart of the city. Their present factory was erected a year ago, and has already become much too small for the requirements of their business, and plans for large additions, to be erected this fall, are in process of preparation. The present

LUMBER TRADE.

Its Growth from Nothing to Many Millions.

ONE OF THE GREAT MARTS

Acres of Land and Miles of Water Front in Use-And Still Growing.

By Charles F. Kingsley.

That part of the basin of the St. Lawrence lying westward of the Niagara River is a region rich in those natural resources essential to the development and maintenance of a healthy commercial prosperity. The old-time adventurers who journeyed through the wilderness, and the later voyageurs of "New France," concurred in describing it as covered with forests which gave evidence of the productiveness of the

In subsequent years, when the boundaries of the country had been defined-first, between the provinces of rival European nations, and then between a possession of England and the new republic-the same testimony was repeated, and in the history of the treaty which closed the War of 1812 it is said that the British Commissioners were disposed to insist upon drawing the boundary line so that the basin of the Lakes would be attached to Canada. The treaty, however, was not made in accordance with the designs of the British plenipotentiaries, and the boundary dividing the Lakes in half remained unchanged. It was not until the Eastern States had in a measure been cleared up and converted into agricultural regions and the manufactories of the present day had had their beginnings that the lumber trade of this territory began to develop.

When the tide of immigration had passed westward beyond the older States into the territory bordering upon the Upper Lakes and the Ohio Valley, the settlers had learned that these Western forests possessed a constantly augmenting value, and that it would be folly to destroy them with ax and fire as had been done in the East.

It was then that the lumbermen of Ohio and Michigan began to float the products of the forest to the populous Eastern markets, and that the port at the foot of Lake Erie began to acquire importance as a lumber mart. During the years prior to 1850 the lumber trade of Buffalo was supplied from the outlying districts, and consisted mainly in meeting the local demand caused by the growth of the town itself. In 1850 there were three lumber dealers in business, who controlled the bulk of the trade. There were several lesser dealers, but their business was of the small retail character, and to some extent was the offshoot of that of the three leaders. These pioneers in the industry were John S. Noyes, Harrison B. Mixer, and S. D. Colie. Each of these three veterans is still engaged in the trade, although they now control but a small part of the great business which they began. The planing mills of that time were still run subject to the rights of the patentee, and it is recorded that in 1850 there were but two mills with that of one of the present day, ed value \$8,912,000. it is safe to say that all of the mills in Western New-York at that time did not turn single mills now in operation.

In those days lumber was cheap. A large portion of that received at this port was from the Canadian forests. Port Dover | Ohio Valley. was considered the headquarters of the Canadian trade. Lumber was delivered to the purchaser at that point at the rate of \$3 for box, \$6 for common, and \$12 for uppers. The grade of lumber included in the same classification was much higher than it is now, and the cheapness and uni- year, and it gives abundant promise of a formly good quality of the Canadian product for several years kept American lumber out of the market. The Grand Trunk and Great Western railways brought the Canadian lumber to Buffalo, and there seemed to be no way for the lumbermen of Michi-

gan to successfully meet the competition. In the latter part of the decade beginning with 1850 there were six lumber-yards in the city, and all of them confined themselves principally to handling hemlock lumber. In 1851 a boatload of the excellent pine of the Michigan forests had been brought to this port. It was of clear, solid bodywood, two inches thick, and in broad widths. The people of the town displayed much interest in the cargo from the new pineries, and nearly everyone went down to the wharf to look at the "fancy lumber." The memory of this load of Michigan pine remained in the minds of the dealers, and when, in 1859, the increasing distance of the Canadian lumber-region, and the augmenting rates of the Canadian railways, practically prohibited importation from the old sources of supply, it was determined by one or two of the older dealers that Exchange. some way must be found to transport the products of the Western forests to the Eastern sues and brought two rafts of sawed lumber down the lakes. A stave-dealer of the city also endeavored to bring down a raft of staves, but succeeded in getting only a part of it into came to examine their rafts they found that was injured to such an extent that they and Buffalo was paying a high price for its lumber by the time it was unloaded at the

Lumber Transportation. It remained for Mr. John S. Noyes to solve the problem of cheap transportation. He conceived the idea of towing the lumber down the lakes in barges, and thus making one steam vessel transport two or more cargoes. His project was ridiculed by many, and those who withheld their sneers believed that the enterprise would end in failure. Mr. Noyes bought a worn-out vessel, dismasted it, cut the decks out, and prepared

among them some of the most progressive and public-spirited of our citizens. They have tried to conserve the general interest by endeavoring to secure uniform rates from the common carriers and to protect lumber consumers from aggressive monopoly. The unequal freight rates which the various railroads established, and the discrimination which they exercised in favor of their more wealthy patrons, was the immediate cause of the organization of the Buffalo Lumber Exchange. This association was distinguished by good work at the outset. The railroad companies yielded to its demands, and since its formation, with the exception of the period of the freight war, the Exchange has secured uniform rates from these corporations. In 1885 the Exchange organized a Freight Bureau, which has since been merged in the similar committee maintained by the Merchants'

There are acres of pine and hemlock from the forests of Michigan and Wisconsin, ship-loads of shingles and timber from the same locality, innumerable bundles of lath from the Lake Superior shore, and tens of thousands of feet of hickory, ash, and walnut from the foot-hills of the Tennessee mountains. And this comprises but a small part of the lumber business of Buffalo. There are yet over 70 firms to be visited if one is to thoroughly investigate the trade. And when the aggregate business of all these dealers is obtained, it will be found to

> be greater than that of any other eastern lumber market. The growth of the lumber trade in Bufother industries. To meet the constant increase, the center of supply has moved up the shores of the Lakes from year to year, beginning at Detroit, moving on to the Saginaw Valley, rounding the curve of the lower Peninsula, advancing along the shores of Lake Huron-it has never halted, and to-day is following the Southern slope of the great Lake Superior basin. In the rear the settler has steadily followed the lumberman, and the regions which he went over with the ax have since yielded to the plow. The products of the country thus opened for tillage have flowed eastward, and have had no small share in giving Buffalo her present proud commercial position. The lumber trade of Buffalo has not only proved valuable in itself, but has also prepared the way for other industries, whose wealth-producing possibilities have been scarcely touched, and which will be fruitful sources of prosperity long after the last lumber-forest of the Lake region has disappeared.

JAMES N. SCATCHERD.

The passing away of one who for a scor of years has been a prominent figure and potent factor in the commercial and social life of a community is always a source of sadness, but seldom in this city has the demise of a leading business man touched so many hearts with a sense of personal loss as the death of the lamented James N Scatcherd, which occurred January 18, 1885 Mr. Scatcherd was born December 4

was the son of a prosperous Canadian farmer, who for many years represented the district of Middlesex in the Canadian Parliament. His youth was passed upon his father's farm, and his educational advantages were such as the school system of the Province afforded. Later on he engaged in lumbering expeditions, and after paying one or two business visits to this city, in the spring of 1852 he located here permanently as the agent of Farmer, De Blaquiere & Deeds, extensive lumber man-But the greatest work done by the Ex- ufacturers, dealers, and shippers at Woodject of grade-crossings. had become venerable with age. Strong men had attempted to reform the management, but favoritism, influence, and other and every consumer of water was treated with equal and exact justice. He reduced the management to a perfect system, and become a flourishing and satisfactory branch efforts, continued for years, that this institution finally succeeded in extricating itself from the burden of debt which impeded its usefulness at the time when his official connection began. He was one of the founders of the Delaware avenue M. E. Church, and a member of the first board of trustees, which was organized November 22, 1870,a relation which continued until his death. In his church duties he was retiring and undemonstrative, but when burdens were to be borne and responsibilities assumed he was always ready to perform his full share Mr. Scatcherd was married Nov. 7, 1855, to Miss Annie Belton, who then lived near his native place, and she, together with his son and partner, John N. Scatcherd, and a daughter, Mrs. Seward Cary, still survive. His rare business ability and industry were crowned with a liberal prosperity, and FITTEST SURVIVE.

Buffalo's Oldest Unchanged Lum-

ber and Timber Firm.

THE lumber trade of Buffalo is one of its most important industries. Several large firms are interested in the business, and an immense amount of lumber and timber is handled annually. One of the largest of these firms, and certainly the oldest established one, is that of E & B. Holmes, which was formed in 1852, and cision as business blocks, and apparently has been in business continuously since

feet of dock front.

The firm of E. & B. Holmes handle a quantity of lumber each year which amounts to the enormous total of 40,000,000 feet. The lumber is of all kinds known to the trade, but consists principally of white pine and hemlock. The various kinds of hard woods used in building and the finishing trades are also largely dealt in by this firm, and a large amount of lumber of this nature is constantly kept in stock. The firm make a specialty of timber of all kinds. During the past year they have handled a large proportion of all the timber sold in the city. The customer can find in their yards any 1824, at Wyton, Ontario, near London. He out limit as to size, length, or quantity.

these yards, and can be bought as cheaply as such material can be sold.

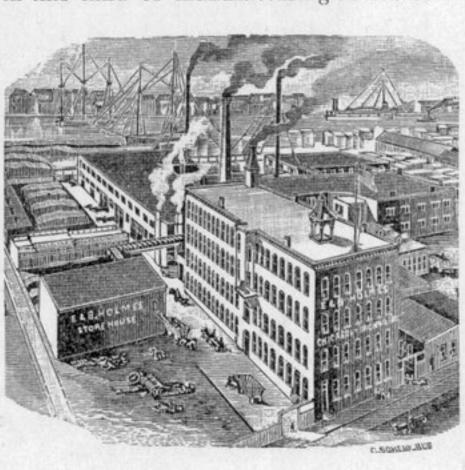

In addition to the local trade of this firm, | yard or at the mills. their sales by cars and boats reach the entire eastern portion of the States. The aim of the firm is to deal in only the best material of the respective grades obtainable, and to do all in its power to satisfy the purchaser, both in regard to price and stock. How well E. & B. Holmes have succeeded in this design is evidenced by growth of their business since the start in 1852, and by the character of the patronage which they have enjoyed.

BUFFALO'S NAME.

The name "Buffalo" is not a particularl poetical or romantic one, but it is as much so as Ox-Ford or Cam-Bridge, the latter meaning simply the site of a bridge over the Cam River. Yet these are the names of the two greatest university cities in the world.

NO EXCUSE FOR IGNORANCE. Buffalo has 61 public school buildings and 635 teachers, and the system costs about half a million a year. There are about 40 private colleges, academies, and

UNION PLANING MILL.

MODERN WAYS.

How Lumber is Worked up in a Wholesale Fashion.

LARGE four-story brick building, with A a frontage of 104 feet on Chicago Stree and 106 feet on Carroll Street, is occupied by Messrs. Boller & Recktenwalt, proprietors of the Union Planing Mill. Dry-kilns, with a capacity for drying 45,000 feet of lumber at once, are situated on Carroll Street in the rear of the mill. These buildings are all protected against fire by the Grinnell system of sprinklers, similar to those in use in THE Express building, while centrifugal blowpipes gather up saw-dust and shavings and convey this waste material to the furnaces, where it is used in place of coal. A Cummer engine of 100 horse-power furnishes all the power for the machinery. The pay-roll includes 120 names.

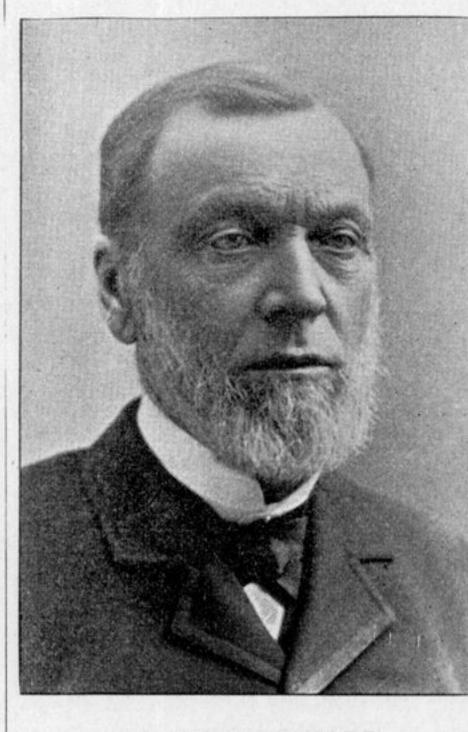

An immense business is done by this house, chiefly in general building materials, shingles, lath, sash, doors, blinds, etc., while kiln-dried interior finish and maple flooring are specialties. This last is dried by the "Chicago Lumber Dryer" (of which the firm hold the patent for Erie County) and finds a ready market in all parts of the Middle and Eastern States.

On Carroll Street, just opposite the mill is a large lumber-yard owned by the same firm, and still another yard (on the Ohio basin, at the corner of Louisiana and Mackinaw streets) is needed to accommodate the business.

The Union Planing Mill has been iu operation for more than a quarter of a century, having been established in 1862. At that time a wooden building on the site of the present dry-kiln gave shelter to the new enterprise, which was eventually to assume such vast proportions.

erected, without necessitating the removal of the old building. On the completion of resents the production of about 150,000,000 the new mill the machinery was rapidly feet a year. Its field of operations is in moved into it, and a delay of only four | Northern Pennsylvania. weeks was caused by so important a

Briggs, and acquainted with the business, and both is President of the concern, and Mr. Newknown as practical business-men, honest man is secretary and treasurer. and upright in all their dealings."

CALVIN P. HAZARD

Among the foremost in the Buffalo lumber trade is Mr. Calvin P. Hazard, whose office is at 92 River Street. We present herewith a portrait of Mr. Hazard and also a general view of his lumber yard and docks. A few of the lumber piles in the immediate foreground, between the slip and the lake, belong to other yards. Mr. Hazard's yard includes the territory beyond the first slip, and also the valuable wharfage on the slips opening into the lake at the point which the propeller is represented as approaching in the drawing. The receiving and shipping facilities of this yard are unexcelled. Mr. Hazard also owns yards quite as extensive on the Tifft Farm, where the storage facilities are of the first

Like many another of Buffalo's prominent business men, Mr. Hazard is a Canadian by nativity. His birthplace was near Pictou, 40 miles from Kingston. on the picturesque cedar-covered shores of the Bay of Quinte. There he gained his first acquaintance with the lumber business being early interested in a "sap-mill." This is the name sometimes given to sawmills situated on water-courses which furnish power for a few weeks only during the Spring freshets-or about as long as the maple-sap season lasts.

In 1864 Mr. Hazard came to Buffalo, with little or no capital, but with sound practical ideas and broad business principles, and established himself in the lumber business. For some time the firm was C. P. Hazard owners, 21,115; by tenants, 14,488.

& Brother, but since 1878 Mr. C. P. Haz-

ard has carried on the business alone. Mr. Hazard extensively handles northwestern pine, coming principally from the Saginaw River and the Bay City district, and makes a specialty of selling in cargo lots to local dealers. He also ships largely to eastern markets as required. His dealings last year aggregated more than 33,000,-000 feet, and the transactions amounted to

more than half a million dollars. His yards, bounded by slips Nos. 1 and 2 and the Erie Basin, cover between four and five acres and are intersected by Palmer slip. This gives him, in connection with the yard on the Tifft Farm, unexcelled receiving and storage facilities. The tracks of the New-York Central, Michigan Central, and Grand Trunk railways skirt the yards, and these roads carry immense quantities of lumber, shingles, lath, cedar fenceposts, and building material generally to the markets East and North.

Mr. Hazard is a prominent member of the Buffalo Merchants' Exchange, is also a member of the German Young Men's Association, and ranks with the solid business men of the city. Associated with him as general manager is Mr. D. Y. Leslie, who is known as one of the best-posted and most reliable men connected with the lumber business in this city. Those who deal with Mr. C. P. Hazard, either in person or by correspondence, are taking no chances.

ON A BIG SCALE.

Greatest Hemlock Lumber Producers in the Country.

DROBABLY very few people who read I the modest sign of the United Lumber Company in the Coal and Iron Exchange Building know that it handles a larger In 1873 the present brick structure was amount of hemlock lumber than any other concern in the world. The company rep-

The United Lumber Company (limited) controls the output of the following firms: The firm consists of Mr. Charles Boller F. H. & C. W. Goodyear; the Allegany Lumber Company, of which Mr. S. S. mends as being both of them "thoroughly Mr. J. J. Newman. Mr. F. H. Goodyear

The company, which has its main office in Buffalo, was organized in 1884, and since then its lumber, rough and dressed, has been sold throughout New-York, New England, Pennsylvania, New Jersey, and Ohio. Some idea of the magnitude of the company's operations may be had from the fact that it owns 25 saw-mills, one of them being the largest mill for the manufacture of hemlock in the country, and it owns and operates about 75 miles of railroad in Pennsylvania. With such facilities, all classes of orders are taken, the lumber being manufactured afterward and shipped in car-lots.

The company owns about 130,000 acres of land, mostly covered by hemlock forests, and in these the saw-mills are distributed The Goodyear Mills are at Austin, Pa., on the Sinnemahoning Valley Railroad, which the Goodyears own, and at Shipping and Keating Summit, Pa., on the W. N. Y. & P. The Allegany Lumber Company run mills along the Allegany & Kinzua road, which they own, and on the W. N. Y. & P. at Bullis's Mills, on the Bradford, Bordell & Kinzua at Smethport, and on the Erie and W. N. Y. & P. at Carrolton. The G. D. Briggs mills are at Liberty and Alden, Pa., and at Keating Summit on the W. N. Y. & P. Mr. Newman's mills are situated at Larrabee on the W. N Y. & P., and at Smethport on the Clearmont branch of the W. N. Y. & P. This list of locations shows the vast territory covered by the United Lumber Company.

The company make a specialty of hemlock bark as well as lumber. During the season, from 2,000 to 3,000 hands are employed in peeling the bark and shipping it to various parts of the country. All the year round about 3,000 people are employed by the company and engaged in the various branches of lumber manufacture. Thus it will be seen that at some seasons of the year from 5,000 to 6,000 people are at work for this great concern.

All the members of the company are experienced lumbermen, who have established a reputation for square dealing. The gross receipts for the output of this concern are necessarily very large, and they are constantly increasing.

A PROSPEROUS NEIGHBOR.

The port of Tonawanda received in 1887 501,000,000 feet of lumber by water, and 31,000,000 feet by rail; aggregate, 532,000,-000 feet. . Many of the largest Tonawanda lumber operators are residents of Buffalo.

BIGGEST OF ITS KIND.

The Buffalo Hard-wood Lumberyard of G. Elias & Bro.

ALK around it twice, keeping on the VV opposite side of the boundary streets, and you have walked a mile. A surprising statement this when made concerning a lumber-yard in the heart of a great city where land is worth \$200 per front foot, but a statement literally true when applied to the great Hard-wood Lumber-yard of G. Elias & Bro., bounded by Michigan, Exchange, Chicago, and Carroll streets.

The splendid West Shore station which was to be the largest and finest structure in Buffalo proved only a magnificent dream, but the great West Shore lot 225x1000, secured at enormous cost, is now the site of the largest hard-wood lumber-yard within the limits of any city in the world. "No great loss without some small gain," says the old adage, and sometimes the gain and the loss about balance. Certainly it is better to have a flourishing industry in the right place, adding its quota to the prosperity of the city, than to see a palace depot languishing in a region better adapted to freight handling than to passenger traffic.

The firm of G. Elias & Bro. is composed of G. and A. J. Elias, both enterprising American-born young men, the former a native of this State and the latter a Californian by birth, who are fully in accord with the progressive spirit of the age.

The business dates back to 1880, when the original yards and docks of the firm were located on Ganson Street. At this time there were but two hard-wood lumber yards in the city, but the success of the new comers stimulated others to go into business, and the number has now increased to six.

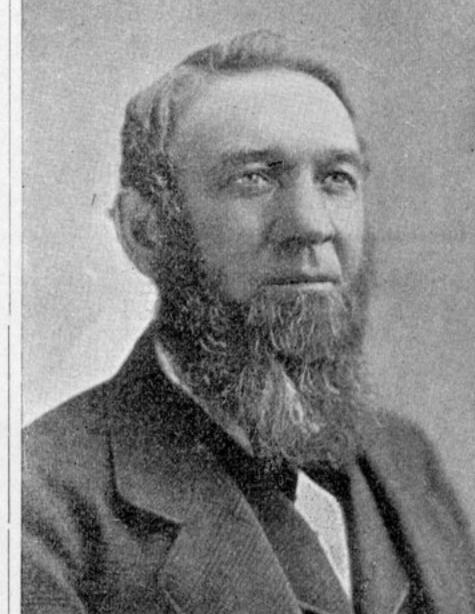

Somewhat over a year ago, requiring increased facilities and desirous of avoiding the grade-crossings by locating on the north side of the tracks, G. Elias & Bro. secured from the West Shore Railroad Company a long lease of the two blocks which had been cleared of buildings to make way for the projected depot, and at once began to grade and enclose the grounds for the purpose of their business. The original idea was to use only the eastern portion for yard purposes, reserving the western half for a circus lot, but under the pressure of the phenomenal growth of the business the compact piles of oak, maple, ash, chestnut, walnut, and other hard woods have multiplied, and the planked driveways have been extended 100 feet at a time, until now it is evident

HALF A MILLION.

Bolt-and-Nut Factory.

THE largest bolt and nut manufactory I in this country, and, with one exception, in the world, occupies the block bounded by Clinton, Eagle, Adams, and tinued business at the theatres, banks, and commercial offices. Watson streets, in this city. It is the property of Ralph H. Plumb, Orrin C. Burdict, and Albert J. Barnard, under the firm name of Plumb, Burdict & Barnard.

The factory was first established in Amsterdam, N. Y., by George E. Bell, and when it passed into the hands of the present | trol of, and is destined to revolutionize the | growth.

proprietors. ard took charge of the factory the daily less. The one exhibited is the first that has members of the firm have often been asked output was from 10,000 to 15,000 bolts a been made, and is sure to attract attention. Why they didn't make a cough drop that 96 feet on Clinton Street, running back having so enterprising a company in its they have finally perfected and have under 300 feet on Adams Street. The main midst. Heretofore the manufactures of the preparation the Quick Relief Medicated building is two stories high in front and city have not called into play the artistic Cough Drop, which good judges pronounce one story in the rear. An L, 85 x 120, powers of our people; the Central Manu- far superior to anything they have ever extends to Watson Street on the east, and facturing Company have shown that these seen. The beauty of these cough drops is a three-story frame building about 100 powers exist, and it is our fault if we do not that they will actually stop a cough, which is

About 400 hands are employed. The present concern manufactures almost every variety of bolt known to the hardware trade, and the output approximates half a The Enduring Work and Material million bolts a day - being more than are turned out by any other factory of this kind in the world save one in Birmingham, England.

The goods manufactured by Plumb, Burdict & Barnard are shipped to all parts of the American continent and extensively to the Engiish colonies of Australia, New Zealand, and Tasmania. The bolts are manufactured entirely by machinery, and the machinery itself is made by the firm at a branch manufactory in Providence, for the new Hamlin building to be occupied | R. I., where about 70 men are constantly employed. The machinery is of the latest improved pattern, and is shipped all over the world. Plumb, Burdict & Barnard have had contracts to equip the railways and navy-yards of several European Governments.

Visitors to the International Fair may see on exhibition diagonally across the way from THE EXPRESS Exhibit one of this firm's improved forging machines, running in mock operation. It is to be regretted that it was not possible to actually manu facture bolts on the machine, but as this would have necessitated the use of fire in the Exposition Building for forge purposes, it was deemed advisable not to enhance the risk to other property.

When it is remembered that for each bolt manufactured a corresponding nut has to be made, the magnitude of a day's work may be appreciated. To make a half million bolts a day it is necessary that a million pieces be forged and handled. Only by machinery would it be possible for even as large a force of hands as is employed at this factory to turn out such a day's work.

The distribution of bolts throughout the New World and part of the Old bespeaks louder than words of praise the merit of the work done. The development of the business, as evinced by the enlargement of the plant, the number of hands employed, and the improved appliances used, is contributory evidence of the enterprise of the manufacturers. By their enterprise, and the distribution of their wares, the name of Buffalo has been carried to distant lands as a manufacturing center of no mean im-

FOR ALL TIME.

Furnished by a Local Firm.

FIRM whose history is carved on the A cut stones in the buildings and written upon the enduring sidewalks which line the streets of Buffalo is that of Brady & Maltby, the well-known contractors and dealers in Albion and Medina sandstone. No firm has been more active during the past decade in furnishing materials for the structures which are architectural ornaments to the city. The present firm is the lineal descendant of Rathbun & Whitmore, who established a stoneyard here nearly half a century ago. Upon the retirement of Mr. Rathbun nine years ago the business passed into the hands of the present owners. Previously Mr. Gilbert Brady had been connected with the Rochester yard of Rathbun & Co., while Mr. George W. Maltby acted as superintendent of the work in the Flower-city branch of the enter-

The yard of Brady & Maltby at the corner of Maryland and Fourth streets is about an acre in area, and contains a full equipment of all the apparatus pertaining to the rapid handling and dressing of building stone, sidewalk flags, curbing, etc. The yard is admirably located for the receipt of the undressed stone from the quarries and its subsequent shipment, the frontage on the canal being over 200 feet, while the railway facilities are all that could be

Mr. Brady is the owner and operator of a quarry at Albion, about 100 acres in extent, whence is derived most of the building stone which comes to Buffalo. The excellence of this stone for building and paving purposes is widely known, and large quantities of curbing, cross-walk flags, and paving blocks are shipped to Cleveland Toledo, Detroit, and many of the smalle-Western cities as well as to Canada. Among the prominent buildings now in

course of erection or completed during the

past year upon which Brady & Maltby have held contracts may be mentioned the new fire-proof hotel, for which they furnish one-half the cut stone; the entire stonework of the residences of William H. Gratwick, Charles W. Pardee, George H. Dunbar, and Henry W. Watson on Delaware Avenue, Charles Lautz on Linwood Avenue, Jos. Krumholz on Main Street, and P. H. CENTRAL MANUFACTURING CO.

BEER AND MALT.

A River of Beer Flowing Freely at all Seasons of the Year.

Long before the village of Buffalo developed into a city Gambrinus had been installed as one of her tutelar deities, and he has never been dethroned.

The first beer was brewed in Buffalo The building in which the first of the "liquid bread" was made is still standing near the corner of St. Paul and Main streets and at present serves as a dwellinghouse. Jacob F. Schanzlin was the pioneer brewer, and the thirst to which the products of his two-barrel kettle paid tribute has constantly developed since that time, until at the present day a half million barrels a year are required to quench it. The beer which Mr. Schanzlin made in the olden time soon found favor in the throats of his fellow townsmen, and it was not long before the fame of his product was echoed through the surrounding country. The weary traveler pushing his way over the bottomless road leading to Buffalo was only too glad to take his stirrup-cup of ale at "Four-Mile Creek," and it was not uncommon for a party of festive Buffalonians to go out through the forest to the brewery and there test the quality of the foaming beverage.

The increasing business of the brewery necessitated an enlargement and Mr. Schanzlin built a new brewery on Delaware Avenue. By this time the capacity of the kettles had increased from two to 15 barrels and still the demand was greater than the supply. It was now time for the establishment of rival firms. Jacob Roos first set up the typical iron kettle of the business at the foot of what is now Canal Street, and supplied his customers by wheeling the beer to them in a barrow. But his business soon outgrew the primitive barrow and the half-keg, and in 1840 he built the brewery now occupied by the Roos Brewing Company on Broadway.

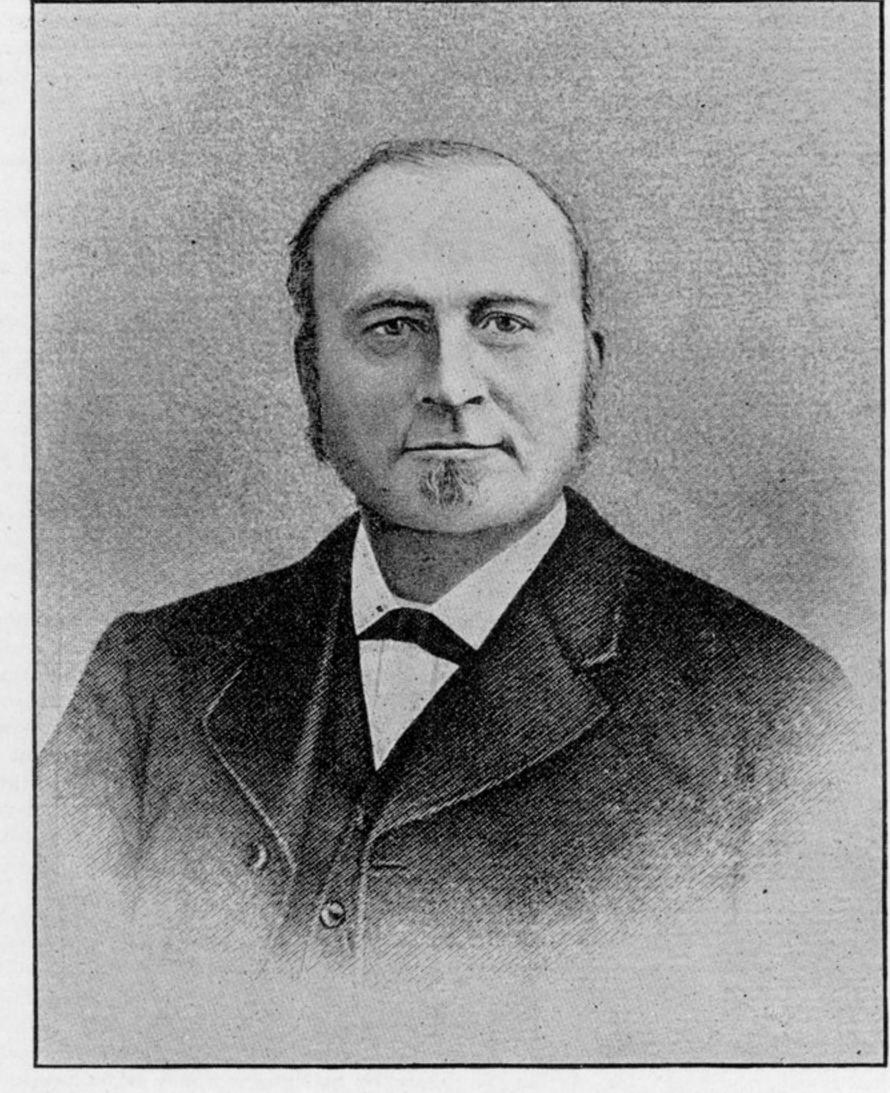

The history of the growth of the business of the other brewers is a counterpart of that of the two pioneers. All of them started with a kettle of limited capacity and all of them soon outgrew their original plant. The adoption of the plan of ripening beer by permanent refrigeration marked the beginning of a new era in the business, in which improved methods and machinery were to take the place of the crude appliances and processes formerly employed. The monster ice-house and the immense storage-cellar then became features of the brewery, and the business was thenceforth conducted in accordance with purely scientific methods.

The malting industry of the city is so closely allied to the brewing interest that it may be said to be incorporated with it. So many brewers are maltsters and so many maltsters are brewers that it is unnecessary to treat the subjects sepa-

The majority of the breweries make their own malt, and consequently a large portion of the malt made here by maltsters who are not brewers is consumed elsewhere. Exclusive of the breweries, there are some 23 malting establishments in Buffalo. The capacity of these establishments range from present condition of the tariff is favorable to the development of the malting industry. It is well known that the No. 1 heavy Canadian barley is the best known for brewing but ten cents, while upon a bushel of malt it is twenty cents. Consequently malting is handsomely protected and actively stimulated. The history of the malting business is contemporaneous with that of brewing. The first malting, like the first brewing, was to supply the local demand. With the growth of one business came the development of the other. When the beer began to be shipped out of the city, an export demand for malt also sprang up. The same demand which caused the shipment of beer also created a demand for malt. The malting season lasts from the early part of September until the first of the following May, and is longer in Buffalo than elsewhere, because of the cool Springs-a great advantage to the local maltsters. While in the process of manufacture, the wet grain is watched night and day with all the solicitude imaginable. A variation of one degree of temperature beyond certain limits-the admission of too much or too little light—the improper spreading of the grain upon the floor-too slow or too rapid drying-any one of these contigencies means the partial

if not entire destruction of the malt. To one who has never gone through a brewery there can be no adequate realization of the magnitude of the operations which are being performed, nor of the scientific care and skill which are employed at every stage of the operation. From the moment when the barley is placed in the malt-vat until the matured liquid is taken from the ice-cellars nine months later, there must be an untiring care and supervision exercised over the process. An inspection of one of gaged and building operations were at once the large breweries of the city will show the visitor that this business, although but little known by the outside world, is really an

enormous industry. On your way through the brewery you will see piles of malt containing over 100, 000 bushels; huge simmering vats in whose 25,000 gallon depths a dozen men easily could be drowned; mash-tubs in which the product of a 100-acre farm can be handled at one filling; malt-rooms containing more grain than a steam-thresher could separate from the straw in a week; dryers where the crop of rear. a township is being prepared for storage; ice-houses containing a quarter of a million

Adjoining the Refrigerated Storage, is the Brew-house, in process of construction. This building is to be entirely fire-proof, and has a frontage of 40 feet and a height of 90 feet above the curb. In this building one of the most modern and complete brewing plants is to be placed.

In the rear portion of the Brew-house will be located the Milling Department. This department contains all the machinery necessary for the reception and reduction of the grain used in brewing.

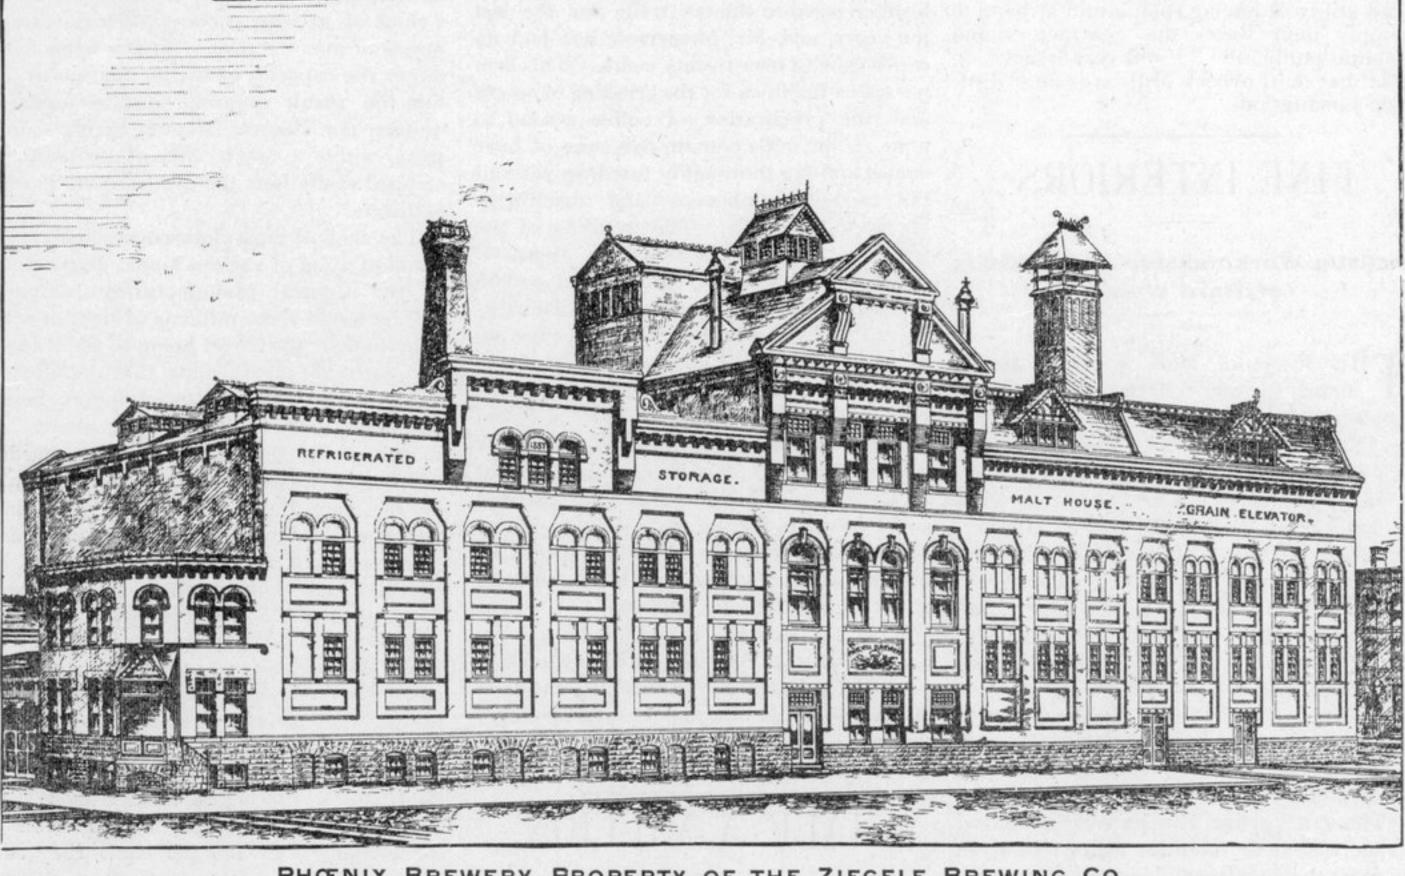

The entire operation of brewing is perhouse; the top floor having the hot-water | by his firm tubs, meal-hoppers, and cooling apparatus;

beer is shipped all over the country, and the out-of-town demand necessitates the maintenance of supply depots in all the principal cities on the Atlantic slope. At the present time the establishment employs a constant force of 100 men and has a yearly output of 120,000 barrels. The popularity of Gerhard Lang's beer is largely to be attributed to the purity of the materials used and to the unvarying care exercised in its manufacture. The malt is made at Mr. Lang's own malt-house and is the product of Canadian barley of the highest grade. The brewery is supplied with all the modern appliances which science has placed at the disposal of the manufacturer, and it is safe to say that there is no establishment in the country better equipped, or better supplied with facilities for a large production, than Mr. Lang's. The leading specialty is "Lang's Buffalo Lager" beer for home consumption and export. This beer has long been considered by good judges to be without a superior. It is interesting to learn that in a recent report of the chief chemist of the Agricultural Department of the United States, he asserted that of 28 samples of foreign and domestic beer analyzed by him, he found Gerhard Lang's beer to be highest on the list, and denominated it "a pure and healthy beverage." When the exhaustive nature of the test is considered, it will be seen that this is the very highest praise which could be given to any beverage. There certainly made by Gerhard Lang.

MAKING CLOTHING.

Five Thousand Buffalo People Live by it-A Growing Trade.

ANY people will be surprised to learn IVI that 5,000 men and women are engaged in making clothing in Buffalo, in addition to those employed by the merchant tailors, but such is the case.

There has been a marvelous growth in the clothing trade in the last 20 years. In fact, it is thought that the manufacturers of ready-made clothing have increased the quantity of goods turned out more than almost any other line of business. Buffalo has shared to the fullest extent in this growthalthough there are still nine or ten cities in the United States which yearly turn out more ready-made clothes than we do, little Rochester being one of them. Syracuse and Utica also do an immense wholesale clothing business. Half of the ready-made clothing in the country is made in this

One cause of the growth of the readymade-clothing trade is the fact that a man can get, at the present time, a suit of clothes just as well made, and one that may fit him about as well, at a wholesale clothier's as he can from a custom tailor.

Instead of the old three sizes, 36, 38, and is abundant reason to boast of the beer 40, suits are now made in every conceiv- One would naturally suppose that the able size, to fit to a nicety men of every conceivable shape - short, stout, long, slim, straight, crooked.

> A better grade of ready-made clothing is in the market, and the rising generation seems to be taking kindly to it. It costs about as much to make a garment now as it has at any time in the last 20 years, but better goods are being used. There has been a marked change in the trade in that respect. The manufacturers are now cutting up goods that cost \$4 or \$5 a yard. Of course the custom tailor won't outlive his usefufness, but he has been obliged to cut down the prices of his goods something like one-third to meet the prices of the wholesale manufacturers.

Thirty years ago there were not a dozen wholesale clothing manufacturers in the country; now there are about 1,000. Just after the War, Buffalo could boast of two-Warner's and Altman's, each with a very limited trade. At present Buffalo turns out from \$4,000,000 to \$5,000,000 worth of ready-made garments every year. She has some 60 agents on the road, selling clothing all the way to the Pacific coast, and her growth in this industry shows no sign of letting up, nor will it so long as Buffalo keeps its reputation for making fine goods.

On delivery days, Pearl Street, between Seneca and the Terrace, where many of the formed in successive stages in the Brew- the immense business now done annually clothing manufactories are located, is crowded with all sorts of carts and wagons, The Weyand Brewery was founded in upon which are heaped piles of cloth ing before being made up. already cut into suitable shapes for trousers, coats, and vests. The smaller carts, or in some cases baby wagons, are wheeled home women who take in this sewing in addition to their regular housework are usually given

The better class of work is taken by tailor employs usually one or two men and 15 or of the sewing, while the men attend to the pressing and shaping. The cloth is sponged, the button-holes are sewed, and even the button-covers are put on over wooden moulds, by machinery.

Ths Sisters of the Good Shepherd take a large amount of work to their hospital, turning out sometimes as many as 200 overcoats a week. Some work used to be done at the penitentiary, but the new prison labor all the adjacent States to the South and law spoils that custom. With scarcely an exception, the people employed in sewing clothing are Germans or Poles. They are thrifty people, most of them owning their own shops and houses, and having a little bank account too. No more hand-sewing is done. All the women own sewing machines.

The principal manufacturers of readymade clothing in Buffalo are: Desbecker, Weill & Co., L. Marcus & Son, Cohn & Co., Altman & Co., Warner Bros. & Co., Warner, Jellinek & Warner, Brock, Weiner & Geismer, Henry Haenlein, and M. Wile &

DESBECKER, WEILL & CO.

The firm of Desbecker, Weill & Co. have the reputation of being enterprising and pushing manufacturers of Ready-made Clothing. Samuel Desbecker, the senior member of the firm, began the business some 25 years ago, at No. 214 Main Street, in a little building on the present site of the Bank of Buffalo. The business at that time was carried on under the name of

The establishment of Desbecker, Weill & notices is the finely appointed office on the The demand for Weyand's beer is not right. It is divided into private and general offices, and finished in oiled hard woods.

chasers are taken and shown just what can be done for them in the matter of supplying a stock of ready-made clothing. It there are any merchants whom the firm cannot satisfy in the way of variety or quality, they have not yet been found.

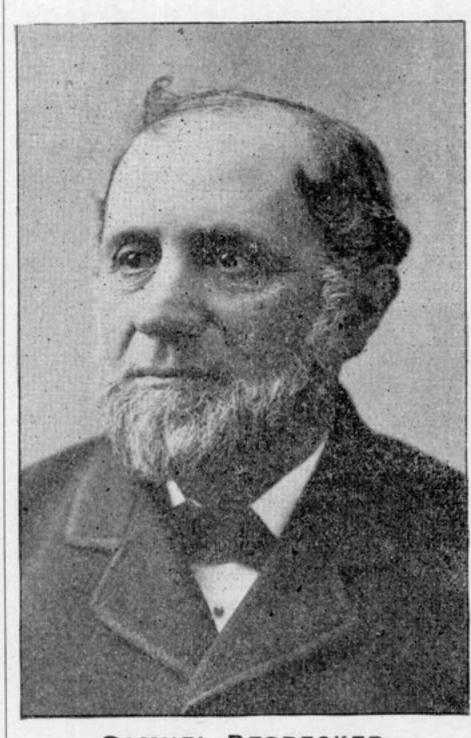

On the third floor there are no workrooms. Here is where a portion of the stock is kept, and to the ordinary mind it seems impossible that such an array of clothing can be sold within the next ten years, but you are informed that here is but a small fraction of the stock on hand, and that all of it will be gone within the next three months.

The fourth floor is filled with every style of boys' and children's clothing known to the trade.

On the fifth floor are found overcoats without number. By going there in August you discover that clothing men must provide for the seasons several months in advance.

The top story is not used for stock alone. There are several machines here for the handling of cloth which are great noveities to the uninitiated. The "Examiner" is a machine which for certainty in results can discount any civil-service board in the country and then come out ahead. The rolls of cloth are all passed through this machine, and the mechanism registers every yard and every fraction which passes through. A man sits at the reel where the cloth is re-wound, and every defective piece or portion is at once detected.

cloth is now ready for the cutters to wor

up; not so-the big rolls are next taken to exclusively; he is a stockholder and directhe "Sponger," a machine which saturates tor in the Third National Bank, and is conthe goods with water by a steam process, nected with several well-known enterprises. and thus allows the fabric to do its shrink-

The cloth after drying is ready for use and is transported to the second floor, where it is turned over to the cutters.

On the top floor is also a storage-room, where the goods ordered by the firm's customers, and which have been packed in boxes, are awaiting shipment. The boxes are big, square structures, and frequently hold enough to clothe the inhabitants of a township. Many of these boxes awaiting shipment contain from \$1,800 to \$2,000 worth of goods, and \$25,000 is not an uncommon value to be placed upon one

So much for the details of the business. The growth of the firm's trade has been constant and steady. From the day when the senior member first opened a store until the present time, there has been an augmentation of the business which could have came only from fair dealing and strict attention to correct commercial principles. From being confined to the local trade, the business has spread over West, and now the firm numbers regular customers in Pennsylvania, Michigan, Illinois, Iowa, Kansas, Ohio, Missouri, and many other States. This house is now widely known, but just as great attention is still paid to details, just as great

LEWIS WEILL.

effort is still made to please customers, as in the days when the struggle for commercial position was in progress.

One of the branches of the trade of which the firm makes a particular feature is the fitting of customers by means of special measurements sent to them by the retailers. While not in any sense doing a custom business, it has been found necessary, in order to afford perfect satisfaction to their patrons at a distance, to introduce this special feature. A chart, with full details for measurements, is sent, with samples of goods, to the retailers, and the clothing is made up from the directions sent in. This is a feature adopted by very few dealers, and is deservedly popular with all the customers of Desbecker, Weill

THE EXTREMES.

LEOPOLD MARCUS.

L. MARCUS & SON.

The wholesale clothing firm of L. Marcus-

& Son, at No. 84 Pearl Street, was founded by Leopold Marcus, the senior partner. Mr. Marcus is a native of Germany, having been born in one of the states of the old Germanic Confederation, in 1831. Mr. Marcus learned his trade in the old country, where for several years prior tohis emigration to America he was engaged in the dry-goods business. After his arrival in the United States he settled at Dunkirk, where he again entered into the dry-goods and retail clothing trade. He remained in Dunkirk until after the breaking out of the Rebellion, when he became convinced that it was his duty to fight for his adopted country. Mr. Marcus entered the 72d New-York Regiment, in which he was chosen a captain, and took part in the more important campaigns of the War. In 1863 he received a severe wound, from which he was a long time in recovering. Returning home on a leave of absence, he carried out a design conceived prior to his enlistment of removing to Buffalo. The removal was effected, and as soon as he was released from military duty he engaged in his old business. His first store was on Exchange Street, and he remained at that location until 1873, when he removed to the Washington Block. Another term of years was passed on Washington Street. In 1884 he again removed; this time to No. 84 Pearl Street, where the firm of L. Marcus & Son are at present doing business.

Mr. Leopold Marcus is a successful manufacturer and dealer in Ready-made Clothing. He has not, however, confined his business ventures to the clothing trade

MARVIN M. MARCUS.

Marvin M. Marcus, the junior member of the firm, was bred to the business and is thoroughly conversant with its every detail. He was born at Dunkirk, about six months before his family removed to Buffalo, but is a Buffalonian in every sense of the word. He is now 27 years of age, and is the business manager of the firm. He received his instruction in the schools of Buffalo, and was given a thorough business education. Having learned the workings of the business during his minority, he was admitted into the firm shortly after reaching the age of 21. From that time Mr. Marcus has devoted himself to the business with an energy and perseverance which must place his firm in the foremost rank of the wholesale clothing trade of the country.

The store now occupied by L. Marcus & Son is a five-story building supplied with all the conveniences and appliances usually employed in the business. The stock handled and the amount of work done there in a year are great enough to convince any one that lively, pushing men must be directing the business.

The first floor is occupied by the Office and the Cutting-Room. Twelve cutters are constantly at work. The number of suits cut out in a single day is often greater thas some firms handle in a month.

L. Marcus & Son deal exclusively in Youths', Boys', and Children's Clothing. Their business is largely in the Western

States, and is constantly increasing. On the second floor is stored one of the largest stocks of youths' clothing in the city. Suits of all sorts, sizes, materials, and prices are to be found here, and if the entire stock could be drawn upon there would be more than enough to supply all the Sun-

day-schools of a great city. On the third floor is another immense stock, this time composed exclusively of boys' and children's suits. The fourth floor

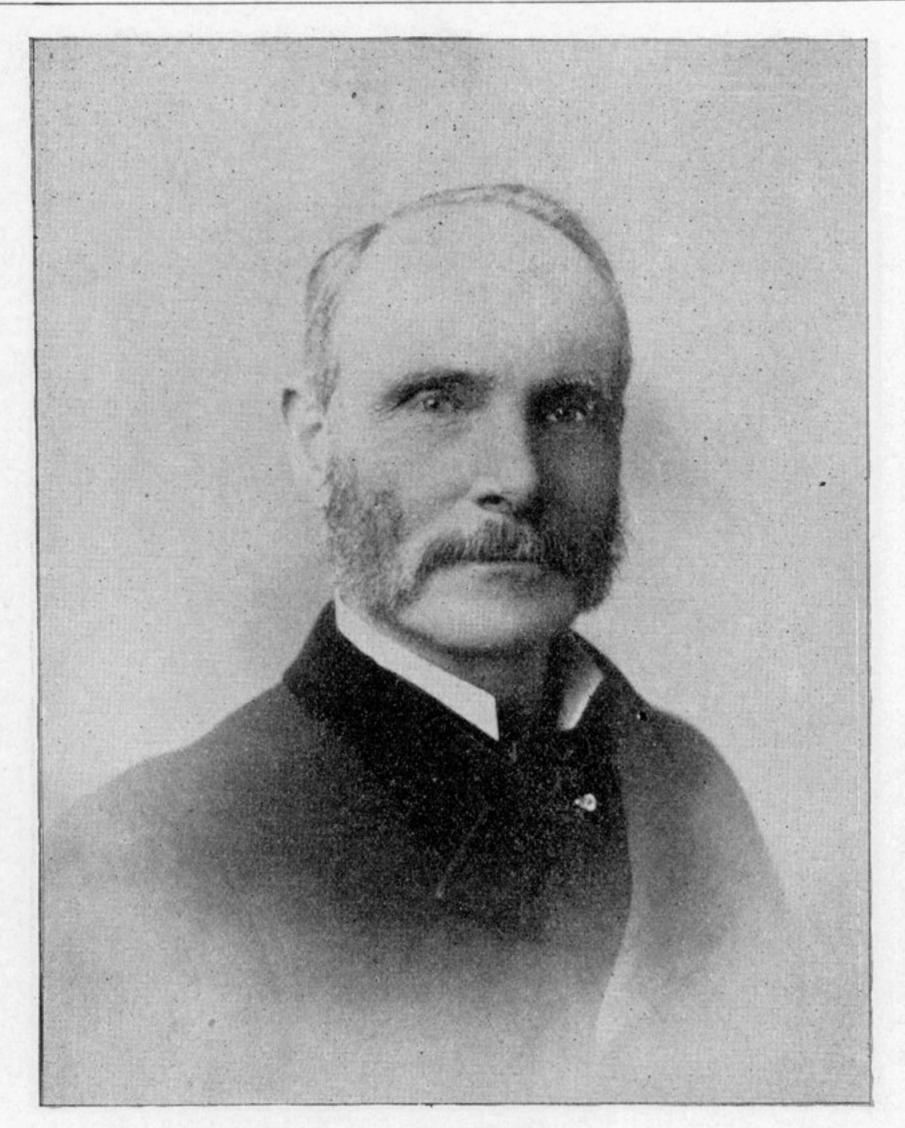

is filled with children's clothing. The top floor is filled with bales of overcoats. There are overcoats to be worn in the bracing Dakota blizzards; overcoats for the mild winter of the Southern States; overcoats for the autumns of the North; in fact, garments for all regions, climates, and

The firm also have a warehouse on Franklin Street, where another immense stock is ready for shipment.

The trade of Marcus & Son, which is now of great magnitude, is largely in the West. The Scott press and the Ramage press Of course there is a local trade, one which to some firms would seem a large business in itself, but the larger part of the shipments are to Western points.

> At the present time, although carrying a reduced stock, there is \$175,000 worth of clothing on hand. When it is remembered tail buyers within three months, some idea of the magnitude of the business may be gained. There is certainly no firm in the clothing business in Buffalo to-day which

in all its details.

William McRae is a prominent citizen of Lockport, N. Y., but he is the sole proprietor of the Buffalo Cooperage Stock Works at the foot of Hamburg Street, in this city, and as such is properly classed among the fore-

WILLIAM MCRAE.

most business-men of Buffalo. A few years ago Mr. McRae bought nearly 1000 acres of timber land at Port Alma, Ont., about 50 miles from Detroit, on Lake Erie. Here he erected mills, docks, and dwellinghouses, and a hotel, and built a tramway into the woods. The timber is there prepared and shipped by boat to the cooperage works here, where it is converted into staves and patent coiled hoops. Mr. McRae employs a large force of men and boys and supplies an extensive trade. This is an important factor in Mr. McRae's business, but it is as a contractor that he figures most

prominently.

He was born on the island of Cape Breton, of Scotch parents, January 1, 1827. He came to Niagara County, N. Y., when seventeen years of age, and received his education 1819, settling in the town of Elba, Orleans n the district schools of this State. He was early engaged in the business of public works, and has been interested in some of of an edge-tool maker. For ten years he the largest contracts for the Government of Canada and some very notable ones in this country. Among the most extensive were those on the enlargement of the Erie Canal, the Wabash, St. Louis & Pacific R. R., and the enlargement of the Lachine Canal through the city of Montreal, including the building of the new St. Gabriel ship-locks. He was one of a syndicate having a contract large amount of work on the New York Central and D. L. & W. railroads in this State. He has lately been engaged in putting in the Holley system of water works in the cities of Fond du Lac and Wausan, Wisconsin, Batavia, N. Y., Emporia, Kas., Covington, Ky., and Dallas, Texas. At present the firm of McRae & Lally, the largest railroadcontracting firm in Michigan, of which he is the head, is building several hundred miles of road in that State. In all his contracting work, from the first, he has been uniformly successful. Mr. McRae has often refused to run for political office, both local and State, but has never hesitated to occupy positions of trust and importance when he could enhance the welfare of his city. He is at present vice-president of the Farmers and Mechanics Savings Bank and director in the Lockport Paper Co., the Lockport and Tonawanda R. R., the Lockport Electric Light Co., the Hydraulic Water Works Co., &c. He was for years a trustee of the city and member of the Board of Education, and Colonel of the 90th Reg. N. Y. S. N. G.

Mr. McRae was married in 1857 to the only daughter of Col. Charles Molyneux of Cambria, N. Y., who died Jan. 15, 1885. He has four daughters living.

Col. McRae has always been a Democrat in politics, though conservative. In every respect he is a good sample of "A self made man "

ON A NEW PLAN.

An Elevator Addition Which is Adapted to Modern Needs.

C TROLLING along the wharf the other day, the writer noticed among the improvements increasing the commercial importance of this port for the rapid handling of grain the new addition to the Wilkeson Elevator, now about completed. This elevator is built upon a new plan, the invention of Mr. Robert Dunbar of this city, the veteran elevator architect and engineer, who has made application for letters patent upon his improvement. Mr. Dunbar has made the plans and furnished the machinery for seven eighths of our great grain store-houses.

All of the bins in this house are so arranged as to discharge their contents by gravity upon a single conveyor, which simplifies and cheapens the handling of grain to a marked degree. This house is arranged so as to do marine, car, boat, and wagon business, the marine leg being capable of unloading about 15,000 bushels per hour. This is weighed, stored, and cared for. All of the aforesaid work of unloading, and loading cars, boats, and wagons, can go on at the same time.

This addition equips the Wilkeson Elevator with two marine legs, so that two hatches of a vessel can be operated upon at once when the legs come opposite to them. The completion of the new "greyhound" freight carriers of the lake fleet, whose enormous carrying capacity has added so boxes, etc. materially to this class of traffic, induced Mr. Wilkeson to be among the first to recognize the fact that the demand for rapid drop-hammers, and powerful rolls, driven handling of grain must be met, and that the way to meet it was to create it, which he has done.

This places the Wilkeson Elevator in the first hint of the finished tool. Practical front rank of our great grain houses, it now edge-tool men declare this to be the besthaving a storage capacity of 420,000 bushels, and being a monument to the foresight and business sagacity of its owner.

It is Mr. Wilkeson's intention, we are told, to take down the old stone ware-house adjoining this new addition, and thus increase his storage capacity.

EDWARD L. COOK.

EDWARD L. COOK.

In the enumeration of those men who have been instrumental in building up the Buffalo of to-day, and who have borne a prominent part in making it the healthy and happy city which it is, the name of Mr. Edward L. Cook, the well-known plumber, deserves honorable mention.

Born in Buffalo in 1839, the entire life of A Great Labor-Saver, Invaluable to Mr. Cook has been passed in this city. After securing the best education which the grammar schools and the Central School afforded, he taught a country school near Springville for a year, and then, while still a boy, became | publication of books, Mr. Dick, in 1854, connected as book-keeper with the firm of commenced to publish his "Gospel Tribune," Hardiker & Toye, plumbers, and with them he remained until the outbreak of the War. Responding to the call of his country, he joined the 100th New-York Regiment, with which he remained until the close of Davis is largely to be ascribed to the fact hostilities. Entering the regiment as a priall classified and ready to start on their The store was enlarged this spring, and that both of its members are masters of the vate, he was promoted from one official

are increasing monthly. The operations of the company at the home office are controlled chiefly by Mr. Joseph Campbell, managing director, and Mr. J. McBurney, the treasurer, both of whom are shrewd and sagacious business men, who are fully in accord with the spirit of the age.

So much for the company, and now a few words concerning their product. The Dingman Soap Company was organized for but the expectation of continued growth in the purpose of manufacturing the largest bar of strictly pure laundry-soap which could be sold at a profit for five cents, and thus far there has been no departure from this singleness of purpose. The concentration of effort, thought, study, and experiment on a single brand has achieved much which would have been imposible in a more diversified industry, and the company now feel that the many personal comers, and 18 months later a new plant, with mendations they have received, and the general expression of the great body of users wherever their product has been equipped throughout with the most modern laundry-soap in the world. It can be used with either hard or soft water, with or without boiling, and if the simple directions accompanying each cake are duly followed the terrors of wash-day will be reduced one-half. The soap is particularly well adapted to the cleaning of lace curtains and the washing of fine flannels, where much rubbing must be avoided. It is warranted not to injure the finest fabric, and is guarranted to be wholly free from resin and other common adulterations.

The bars of Dingman Soap are neatly encased in a waxed wrapper which is as good as a cake of laundry wax for polishing flat-irons to make them work smooth and clean upon linens. This is a minor matter in the eyes of inexperience, but practical houskeepers will appreciate this gratuitous convenience.

H. D. FOLINSBEE.

The rapid growth of Buffalo is the occasion of a large and active business in real estate. Large transfers are made daily, and an immense amount of money is represented in the annual sales. H. D. Folinsbee is one of the best known real-estate dealers in the city, and probably makes the largest individual and aggregate sales of any one engaged in the trade in this vicinity. Mr. Folinsbee formerly conducted the business in partnership with his brother, J. E. Folinsbee, but since the latter's death has carried it on alone.

Mr. Folinsbee's trade is of the best class. He will not handle doubtful property, and has made it a rule to negotiate only those sales which in the natural order of things should be mutually profitable to the seller and purchaser. His reputation among the property owners of the city is the best possible guarantee of his honorable methods, and is amply sufficient to demonstrate that he is soap-making appliances. Here a large not only a successful dealer in real-estate, force of employees are kept constantly em- but is also a man who stands high in the estimation of those with whom he has transacted business.

JOSEPH L. HUDSON.

ONE OF THE LEADERS.

A Man Who Does a Retail Trade in a Wholesale Way.

THAT Joseph L. Hudson is one of the leading clothiers of the United States is generally admitted. His success in the vast retail business which he has established in several of the large cities of the upper lake region has won him a reputation second to that enjoyed by no other dealer. Mr. Hudson was born at Newcastle-on-Tyne, England, on the 17th of October, 1846. In 1855 he came to America with his parents, who settled at Hamilton, Ontario. Mr. Hudson attended the public schools until he was thirteen years of age. At this time the necessity of his becoming self-supporting was thrust upon him, and he abandoned his studies to seek some employment which should supply him with the means of obtaining a livelihood. He soon found work as a telegraph messenger in the office of the Great Western Railway. Although his father desired him to learn telegraphy, he left the service of the company at the expiration of a few months, and entered a grocer's, where he was engaged for three months at the salary of five dollars per month. His career as a grocer's clerk was terminated by the removal of his family to roads the same privileges which he enjoys in Grand Rapids, Michigan. This occurred in 1860. In the winter of that year he attended school for six months. This was the finishing-off of his school education. In June of the following year the Hudson family once more migrated, this time settling at Pontiac in the same State. In the same month young Hudson found employment in the store of C. R. Mabley. He was greatly liked by his employer, and remained in his service for the five following years. During this time he was promoted from grade to grade until he reached the highest position in the establishment. In the meantime the elder Hudson and Mr. Mabley had established a store in Ionia, and in February 1866, the young man bought out his employer's interest in the concern, and the firm of R. Hudson & Son was formed. The purchase was made entirely upon credit, and nothing better illustrates the character of Mr. Hudson than the fact that his employer was The Popular Buffalo Buggy and its willing to trust him for so large an amount. Pursuing an active, aggressive policy, the firm of R. Hudson & Son grew to large proportions. There was a general enlargement of the business, and several enterprises were taken in hand by its members. | ized the Buffalo Carriage Company and at They opened branch stores, started a stave once commenced operations on an extenfactory, purchased several lumber mills, and sive scale at 170 and 172 Court Street, and were engaged in a number of industries, all here they have since done a flourishing of which prospered.

After ascertaining his exact financial condition, he went East and compromised with pany was organized it has continued to his creditors for 60 cents on the dollar. grow in popular favor and it is attended Returning to his home, he paid all of his with such substantial prosperity that it

was the forerunner of successive enlargements and the establishment of other branches. From that time until the present Mr. Hudson has been uniformly successful in his enterprises. In 1884 he bought the Excelsior Store in Cleveland, from the firm of Stein, Bloch & Co. This store had long been a losing concern, but under the management of Mr. Hudson and Mr. Dickle, the resident manager, it is now one of the most prosperous mercantile concerns in that State. Mr. Hudson did not open a store in Buffalo until 1887. In the autumn of that year he bought out the immense clothing store of Garson, Kernwood & Co. This store is an undoubted success in every particular, and it is doubtful if any store in the city can show a larger trade or point to a more gratifying business development.

The Buffalo store is under the management of A. F. Haass, a clothing man of wide experience. Besides the clothing enterprises, Mr. Hudson bought the carpetstore of Abbot & Ketchum of Detroit several years ago. He has associated with him in the carpet business Mr. C. Symington, a former employee of the firm of Mabley & Co. In addition to these establishments, Mr. Hudson has stores at Ionia, Michigan, St. Paul, Minnesota, and Grand Rapids, Michigan. The store at St. Paul was opened in March of the present year, while the Grand Rapids branch was opened during | Street, adjacent to the Lake Shore Rail- | The expense of obtaining materials is thus the present month. A FAMOUS PRODUCT.

The Celebrated Akron Cement is a Local Manufacture.

at the Akron Cement Works. The works and barn floors, in laying solid foundations and the plant are owned by the Akron for buildings and hydraulic machinery, and Cement Company, of which the Hon. Daniel N. Lockwood is President and Frank S. Coit secretary. The company owns, adjoining the works, a farm of 230 acres which is been used may be mentioned the N. Y. C. underlaid by a stratum of the celebrated R. R. Co.'s Bridge at Albany, the Grand cement rock. The rock from which the Central Depot at New-York, the Canticement is made is found in larger quantities in this region than in any other part of the land Viaduct, the Poughkeepsie Bridge, the State, and is pronounced by experts to be the | Inlet Pier and the City and County Hall at finest quality of stone of that nature to be Buffalo had. The quarries are situated at some distance from the works, and the stone is Akron Cement Company is shipped to disall transported on tram-cars which are moved part of the way by horses and the local demand remaining distance by gravity. It is a ride of a half mile from the works on one of the little cars before the quarry is reached. After passing the summit of the grade rising from the kilns, the car shoots the remainder of the distance with a velocity sufficient to take away the breath of the rider, and brings up at the workings. Unlike the ordinary quarry, the stone here is not obtained by stripping off the soil and then blasting it out. Between the surface and the cement-stone is a layer of limestone which could not be removed without entailing an expense which would render the work profitless. To avoid this difficulty the cement stone is obtained by tunnelling. A drift is run into the bluff and the valuable seam is blasted out very much as would be a vein of coal similarly situated. The tramway runs into the tunnel, or, more properly speaking, the mine, and the stone is loaded into the cars at the face of the workings. The tunnel spreads out from the entrance in the shape of a fan, and now covers a space of over ten acres. The visitor unacquainted with the topography of the tunnel could easily be lost in its recesses. Within the workings a gang of men are kept constantly at work. A boiler, engine, and two steam drills are used to assist the workmen, and every facility for rapid and effective labor is provided. The management of the quarries is entrusted to T. H. Danahee, who makes a very capable and trustworthy superintendent.

A curious feature of the tunnel is the use made of the deserted workings. These are converted into mushroom cellars, having wood has been so closely associated been rented for that purpose by a Western firm. About an acre of old workings has been used for this purpose. The mush- other. It would be rank injustice, howroom beds are made under the direction of R. H. He received a is ready to fall upon him. Tramways ramify from the main one which comes in age of 16 went to New-York to take a clerkat the entrance all over the tunnel, and in ship in a wholesale dry-goods house. He consequence the men are enabled to load successively served four different firms in the rock into the cars without trouble. The the metropolis, and for seven years held the stone is then drawn up out of the tunnel by responsible position of buyer for the hosiery horses. When the car reaches the summit of the slope, about a quarter of a mile from the entrance, the horses are taken off and the cars run the remaining quarter of a mile by gravity.

kilns where the stone is prepared for grinding. These are twelve in number, and ten of them are kept going constantly. The stone is shoveled into the kilns in layers alternating with layers of coal. The fire is kept going throughout the season. At the bottom of the kilns the stone is raked out as fast as it is sufficiently burned for grinding.

Two men are employed constantly to attend to this work, and the stone is being drawn from the bottom of the kilns both night and day through the period of manufacture. From the kilns the burned stone is taken to the upper story of the works in cars drawn by steam power up an inclined

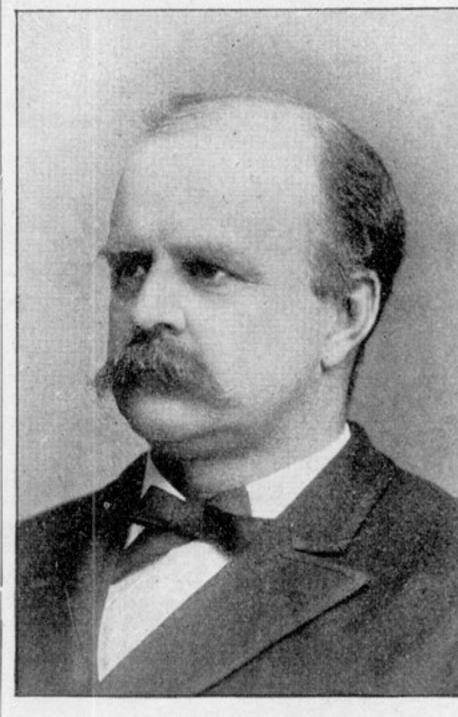

plane. Before the stone is taken into the works all of the cinders of the coal employed in burning are picked out. This work is all done by hand, and is the only portion of the labor of manufacture in which machinery is not employed. After the stone has been elevated to the top of the building it is spouted through a long chute into the hopper of the grinding machine. After passing through the hopper it is sifted, and the screenings are mixed with the rough stone and re-ground. The ground stone is reduced to the fineness of flour before it is fit for the market. Indeed, all of the cement made at these works is reduced to an excessive degree of fineness before it is taken from the mill. The sieves used in the operation of screening are finer than those used in the majority of flouring mills. In addition to this grinding machine, there are four burr stones, three of which are constantly running. The grinding facilities are more than adequate to consume the stone burned in the ten kilns.

The iron mill in which the larger part of the stone is ground has been recently added to the plant, and is now the principal feature of the works. This mill was manufactured by the Sturtevant Mill Company of Boston, and is one of the largest of its kind. The principle of its construction is: the mill does not grind the materials, but simply furnishes the power that compels the rocks to crush themselves; consequently, the hardness of the rock does not affect the result, as it acts upon itself. A stream of broken rock two feet wide and six inches deep runs into the hopper continually while the mill is in motion. It requires two hundred horse-power to drive the machinery.

The Akron Cement Company prides itself upon the uniform quality of the cement which it manufactures. Every pound of the article which goes out of the works is screened through 55-mesh, needle-slot, homogeneous steel-plates, which constitute the sieve before referred to. The cement made at these works is at least ten per cent. finer than that made by any other manu- trade doubled itself annually.

FURNITURE TRADE.

A Great and Long Established House -The Popular Cutler Desk.

THE most prominent object in the Black Rock landscape, as seen from the river front, is a great five-story structure, surmounted by a tall chimney, which stands amid a cluster of smaller buildings at the intersection of Amherst and Churchill Streets. It presents a red brick facade over 250 feet long to the river, and seems to look down upon its surroundings very much as the cathedrals of Europe brood over the cities whose spiritual wants they supply. This impressive building is the great furniture factory of A. Cutler & Son.

The most impressive salesroom in the city of Buffalo is found in the Rink Building, Nos. 166 to 172 Pearl Street. A great hall 100 feet wide and 250 feet long stretches away from street to street, the main floor and galleries of which are packed from end to end with fine furniture enough to stock a dozen hotels and fit out all the palaces on Delaware Avenue. This vast interior is A. Cutler & Son's salesroom.

The history of a firm with such facilities cannot fail to interest everyone who cares to know how great institutions are built up and great success achieved.

Away back in 1824 Mr. Abner Cutler and a Mr. Sterns, two practical cabinet-makers, opened a small shop and store on the bank of the newly-completed Erie Canal at Black Rock. Their only capital at the outset consisted of two pairs of skilled hands, a set of tools, and the determination to achieve something. The primitive furniture enterprise prospered, and for five years continued to yield fair returns. But this little shop on the canal-bank was something more than the pioneer furniture factory of Black Rock; it was here that for the first time in America power was applied in the ordinary processes of cabinet work. The circular-saw, the jigsaw, and the turning-lathe which Mr. Cutler rigged up to be operated by horse-power were the forerunners of a new industrial

In 1829 Mr. Cutler changed his base of operations, and opened a new shop of his respect. own on Main Street in Buffalo. Here too he used power, first a horse, and later on a steam-engine. Starting in a one-story building, with two apprentices and a dozen tools, under the skillful management of Mr. Cutler the business has expanded until now it consists of a factory 55 by 250 feet, five stories high, where nearly 200 workmen find daily employment, and a salesroom covering an acre of space in one of the most eligible business sections of the city.

could not be persuaded to accept any of the faculty. assistance in the general management of a business which had grown to such colossal dimensions, and his son, Frederick H. THE AMERICAN.

A New Business College, with Business Men Behind it.

"Wherefore another commercial school?"

was the general query when the American Business College of Buffalo was projected. The American Business College is a corporation, and not, like most commercial schools, a venture owned and controlled by one or two men having only a theoretical knowledge of the activities of commercial life. The stockholders are practical and successful business and professional men, representing 19 distinct callings, who bring to the college the resources of their aggregate experience. President P. J. Ferris is the Secretary and executive officer of the Buffalo Business Men's Association; Vice-President John H. Smith is the general manager of the Buffalo branch of R. G. Dun & Co.'s Mercantile Agency; Treasurer R. H. Stafford is a progressive merchan. with large financial interests in many enterprises. Among the incorporators are James F. Crooker, Superintendent of the Buffalo Public Schools; Charles A. Sweet, President of the Third National Bank; the Hon. James O. Putnam, formerly the United States Minister to Belgium; Dr. S. N. Brayton, a leading physician; Frank N. Loomis, lawyer, and others whose name stand for progressive spirit, business promi-

nence, and financial strength. The American Business College occupies the three upper floors of the Stafford Building, a fine structure located on the northwest corner of Pearl and Church streets, near the City and County Hall, and only far enough removed from the business centre to escape the noise and distractions of traffic. The outlay was large, and the result is a model college building in every

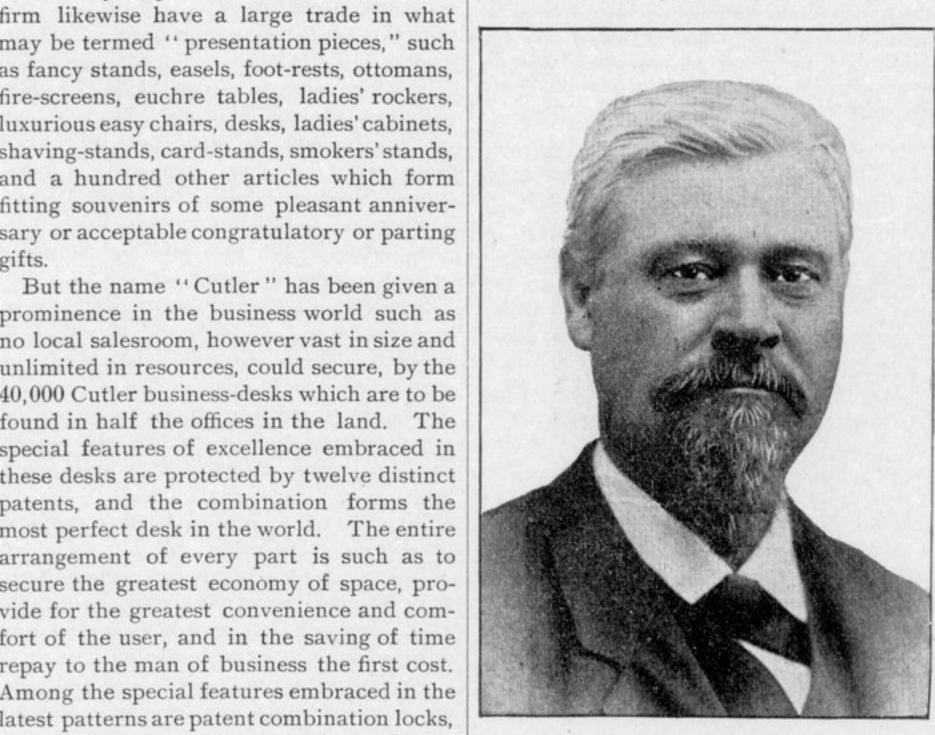

The Board of Directors recognize the fact that a manly demeanor, a good address, a knowledge of office etiquette, and a right conception of the relations between employer and employee promote the progress of a young man in the world of trade. Hence business ethics is made a prominent feature of the curriculum.

Prof. J. C. Ryan, the talented principal enjoys the reputation of being a progressive and thorough-going educator, and his work Up to the year 1870 Mr. Abner Cutler is ably supplemented by the other members

The business college proper is divided into four sections, viz: the English Department, whose work is chiefly preparatory; the Theory Department, where the student is made familiar with the underlying principles of his future work; the Business Practice Department, which is conducted on the plan of the New-York Produce Exchange; and the Office and Banking Department, where the acquired knowledge is applied in the same manner as it will be used in bona fide business later on.

The American Business College does not guarantee to every graduate employment at For the home trade A. Cutler & Son | a large salary. No school can do this in good faith. But this college does guarantee to its students that when they are thoroughly qualified for usefulness in business occupations, then the efforts of the 25 incorporators, many of whom are themselves large employers, will be put forth to secure for

JAMES LUTTED.

Mr. James Lutted is one of the leading wholesale confectioners of this city, his factory being at Nos. 27 and 29 Ellicott Street. His life is not without interesting episodes, and furnishes a new illustration of the value of self-help.

James Lutted was born in Glasgow, Scotland. At 14 years of age, after attending the Normal Seminary, he went to South America as captain's boy on a large vessel, trading on the Pacific coast. He remained in Chili and Peru for four years, learning the Spanish language and becoming to all appearances a typical Chiliano. In 1863, on his way to visit friends in Canada, he passed through Buffalo. Here he formed the acquaintance of young men who were preparing to join the Army, and here, a little later, he also enlisted in the 12th N. Y. Cavalry. With his regiment, he was ordered to North Carolina, and plunged at once into active scouting and guerilla service, soon winning the rank of quartermaster-sergeant of Co. H. He stayed with the 12th Regiment until it was mustered out of service in 1865. After a year at Bryant & Felton's business college, Cleveland, O., Mr. Lutted came to Buffalo and found employment as bookkeeper and traveling-man for Garrett Lansing, confectionery manufacturer. After about a year he entered the employ of Henry Hearne, also a wholesale candy-maker, and stayed with him ten years. Then he went commodious quarters crowded with his

The building is 50 by 100 feet, four stories high, of brick with stone trimmings. The walls are unusually heavy, and the structure has been pronounced one of the strongest and most substantial for its size in Buffalo. Mr. Lutted says that if his busi-

Mr. Lutted now employs 125 hands.

Last year's business amounted to over \$200,-000; this year's will reach fully a quarter of a million. Recently a large invoice was shipped to a town in South Africa. Mr. Lutted has regular customers on the Pacific Coast and at other remote points. He has a branch manufactory at Fort Erie, Ont., and supplies an extensive market in Newfoundland, Nova Scotia, and throughout Quebec and Ontario.

His specialties are the famous "J. L." and "Uncle Sam" cough-drops, fine chocolates, and penny goods. He makes it his boast that the latter are never "shelfgoods," but sell on sight. He is the originator of the toothsome "Italian cream," now a staple with the trade, and has also patented a machine for moulding gum-drops.

Besides candies of all grades, he carries the largest stock of show-cases in Western New-York One feature of Mr. Lutted's business is his ability to supply everything needed in the retail trade, including not only candies and show-cases, but glass jars, peanut roasters, counter scales, ice-cream freez-

the firm, are justly regarded as superior stock, and leading buyers now place their duplicate order for these teas with the house each season. They carry in stock everything in the tea line, and their expert judgment in selecting the various grades of this commodity is recognized wherever the house is known.

Their extensive coffee trade is the direct result of careful expert selection on the one hand, and of honest treatment of the trade on the other. They carry a large assortment of leading growths, such as Javas, Rios, Maracaibos, and Mochas, and some of their leading brands of roasted coffees are now quite famous and are recognized as standard wherever known. Their No. 144 Java Coffee, sold in 50-lb. cans, commands a sale amounting to thousands of cans annually, and so successfully has the trade been conducted that not one instance of dissatisfaction has come to their knowledge. Their only recommendation is "that No. 144 is an honest Java coffee sold at an honest price." We would not fail to note their very extensive sale of genuine roast Mocha; also their leading brands of roast Rio, known as No. 155 and No. 177, and their Cossack package coffee, which enjoys a leading place in the trade.

Messrs. Hatch & Jenks express unbounded faith in the future greatness of Buffalo as a manufacturing and commercial center, and believe that the present

FIRE PROTECTION.

Grinnell Automatic Sprinkler in the New Hamlin Building.

THE cuts below show the arrangement equipped a number of properties for the for fire protection in the new building now in course of erection for Barnes, their patrons and wrote over one hundred Hengerer & Co. of this city.

the Grinnell Automatic Sprinklers. Each would suffer from water damage. Out of dot on the plan shown represents a sprink- over eighty replies received, thirty per ler head, all floors being equipped, even to cent. reported leaks, or spontaneous openthe spaces between ceiling and roof.

tank with a capacity of seven thousand joined in recommending the Grinnell for a (7,000) gallons in the tank-house on the dry-goods store. I am thoroughly satisfied roof of the Main-street building connects with the result of my investigation, as it with the mains from which all of the sprink- confirmed my judgment in the matter after lers will be supplied. This tank will be a careful examination of the principles on filled through a nine-inch pipe from the which the different sprinklers were contwo Duplex Blake pumps shown in the base- structed." ment. These pumps have fourteen-inch steam cylinders, ten-inch water cylinders, bined capacity of eight hundred (800) gal- pondence: lons per minute when running at ordinary speed, which can be doubled in an emergency. They take suction from a brick tank sunk below the basement floor which receives the discharge from the hydraulic elevators. This arrangement secures a constant change in the water supply which will prevent its becoming stagnant.

In case of the sprinklers opening and the water in the lower tank being drawn below a certain level by the pumps, the six-inch float valve in the main from the street will automatically open and give an uninterrupted supply as long as the pumps can be kept at work.

The arrangement of the valves and pipes controlling the operation of these pumps deserves more than a passing notice. The five-inch mains connected with the tank, and from which the lines to the sprinklers are supplied, also connect with the nine-inch discharge pipe from the pumps in the basement, and have a check-valve which will close whenever the pressure in the pipe is greater than that due to the head, or height. The nine-inch discharge pipe from the pumps has a float-valve over the tank which will close when the water reaches the proper level, thus allowing us to carry any pressure on the sprinkler system without overflowing the tank. A pressure-regulating valve in the steam supply will stop the pumps whenever the desired pressure is reached, and instantly open and start the pumps whenever the water pressure is reduced, either by starting an elevator or opening a sprinkler. Alarm valves in the mains will sound a gong as soon as there is a movement of water in the sprinkler pipes, thus giving notice to the watchman or engineer of the starting of a sprinkler or a leak in the system from any cause. It will be seen that as long as there is sufficient steam pressure to work the pumps the sprinklers will be supplied direct from them, through the connection in the basement between the discharge-pipe and the sprinkler mains, but in case of failure in this supply from any cause, the check-valve at the tank would open and the seven thousand (7,000) gallons would be available.

In an interview with the architect, Mr. W. W. Carlin, on the subject of fire protection, he says: "In my early study of this building I arrived at the conclusion that it was not feasible, with present known methods of fire-proofing, to build a building covering that ground, having the entire first floor in one room, fill it with counters, shelving, office partitions, etc., and a stock of dry-goods, and allow it to burn out without destroying the building. I next turned my attention to protecting all of the structural parts of the building, as far as possible to prevent the spread of any fire which might originate, and to secure the building against serious damage from an ordinary fire. The editorial in The Express added evidence to the assertion of the sprinkler representatives and brought up this question in a favorable light, but we feared to place sprinklers over valuable goods, exposed as such stock usually is, as damage by water from a leaky sprinkler (not opened by fire) would not be recoverable from the insurance companies, but acting on the advice of Mr. A. M. Granger, representing the Grinnell System, I resolved to satisfy myself, at least, whether it would be safe to equip a dry-goods store or similar stock with a system of sprinklers under water pressure. In pursuance of this resolve I wrote about one hundred and forty personal letters to patrons of the Grinnell Sprinkler who were reported as having had fires since their plants were installed, enclosing a cut of the Hamlin building taken from THE SUNDAY EXPRESS, asking for an express in of opinion and also whether they had had leaks or broken sprinklers. Out of about one hundred and twenty-five replies received, not one reported a leak or head broken (except by a blow); about seventy-five per cent. ex-

joined in expressing themselves satisfied the Grinnell. with their own plants. This decided the question of the practicability of such an equipment, but not definitely what sprinkler to adopt. A rival concern having owner of this building, I secured a list of similar letters to them, selecting as far as The building will be fully equipped with possible firms engaged in business which ing of the heads, while a large number, Referring to the vertical section, the iron although they had had this sprinkler in use,

> ANCHOR KNITTING MILLS, HAGAMAN'S MILLS, N.Y., July 3, 1888. W. W. Carlin, 57 Chapin Block, Buffalo, N.Y. Dear Sir: Your favor of June 27th received and contents noted with care. I can see no reason why the sprinklers cannot be put in so as to protect all parts of any building; in fact I think all hotels ought to be made to put them

> As to the leaking of the "Grinnell," I have never seen one, but did have trouble with the Walworth and took them out and put in the Grinnell and feel that I am safe from burning out. One thing in connection with the sprinkler system I would recommend: that is some automatic alarm to give notice when the sprinkler is open. This will give notice that they are open and working, and often save a large water damage by allowing the sprinkler to run only a

We also find that it is a saving of money to put them in, as it has lowered our insurance rates and makes the risk a much better one. Any information I can give you I will give

freely and feel that in doing so I am making the insurance rates less for all. As to the construction of the Grinnell, the flexible seat is the point of superiority over all others. The others are too rigid and will loosen

from water hammer in the pipe. Yours truly, WM. M. PAWLING.

RAND AVERY COMPANY,

BOSTON, July 2, 1888. Dear Sir: Your letter of June 27th asking for our opinion of the Grinnell Sprinkler with which our buildings are equipped, to hand. We take great pleasure in saying that after many years experience with the Grinnell, we being probably the first large manufacturing establishment in this part of the country to test and introduce the sprinkler, that there is nothing too good that we can say for it.

Our main buildings in the city proper, of which we occupy three, are equipped throughout the seven stories with the Grinnell apparatus. We have never had any trouble whatever from leakage, and, as you can well imagine, we have thoroughly investigated all the sprinklers in the market, and are convinced from personal inspection that there is no possible way of making

pressed their opinion in favor of the com- a sprinkler that will remain perfectly tight plete equipment of such a building; all unless constructed with a self-closing valve like

> It is a positive pleasure to have an opportunity to say a good word for the Grinnell apparatus and we unhesitatingly say that were we to equip our building to-day, we would take the Grinnell in preference to any other that we have examined, even though we were obliged to pay considerable more for it than any other.

> > Yours truly, RAND AVERY COMPANY, Thos. W. Lawson, Treas.

The House Described Below Has Been a Leader in the Trade.

MERCANTILE establishment which A challenges not only the attention but the admiration and wonder of every sojourner in this city is the immense so-called Crockery Store of W. H. Glenny, Sons and Company, located at 251, 253, 255, and 257 Main Street. This mammoth establishment has been a prominent feature of Buffalo's enterprise since 1840.

The magnificent five-story iron building, extending through 200 feet from Main to Washington Street, with a frontage of 55 feet on each, is filled from basement to dome with full lines of imported and American household goods for the wholesale and retail trade; each department employing its own importers, shippers, and

A tour through the building is an education in itself, and the harmonious arrangement of sparkling glass, daintily tinted China, and gleaming silver brings back our childhood's belief in Aladdin's palace and its bejeweled walls.

In the China department Sevres, Meissen, Hungarian, Copeland, Royal Worcester, Doulton, Bonn, Carlsbad, Minton, and Wedgewood are kept in stock; while a large trade in dinner and course sets in Haviland China is carried on. A finer line of afterdinner coffees does not exist in America. One delicate little specimen was discovered laboring under a \$60 price-mark, while just opposite, in the vase department, the ladies linger lovingly over an aster-painted Copeland labelled \$250

The firm make a specialty of cut-glass, the brilliant display filling a large room. In another department Venetian, Baccarat, Petersdorf, and choice pieces of cameo ware are on exhibition.

In the Art Room, which is one of the attractions of the store, is a space devoted to solid silver wares of several makes, principally Gorham and Whiting. Tea sets run up to \$475, and the latest in cutlery and fancy ware are here displayed. Clocks, bronzes, bisque figures, brass goods, and bric-a-brac of all descriptions have their place in the store; also gas and kerosene fixtures, plated ware, etc., etc.

Some idea of the immensity of the business can be gained from the fact that, in addition to the building just described, one equally large at 42 Pearl Street is devoted exclusively to unpacked goods for the wholesale department, while the firm also carries on an extensive establishment in Roches-

Wm. H. and Bryant B. Glenny compose

the present partnership. The trade now extends throughout New-York, Pennsylvania, Ohio, and the Northwest, and more or less orders are coming in from every State in the Union.

The reliability and liberality of the firm, the excellent quality of the goods, and the prompt attention which is given to orders large and small make this a popular house with which to deal.

W. H. Glenny, Sons and Company will have a large display at the Exposition, which will doubtless secure the attention it deserves.

B. F. GENTSCH & SONS.

Mr.B. F. Gentsch, senior partner of a leading pickle firm, was born in Saxony, 1835, and came to Buffalo in 1854 without capital. To-day the establishment of which he stands at the head has an annual output of \$40,000. Until 1885, Mr. Gentsch shared his business prospects with a brother, but was then joined by his two sons.

The business has so increased that two buildings (329 and 321 Broadway, and 232 and 234 Walnut Street) are necessary for the accommodation of the trade, which embraces a full line of cider, white-wine and cider vinegars, French and German mustards of the best quality, pickles of all kinds, chow-chow, etc.

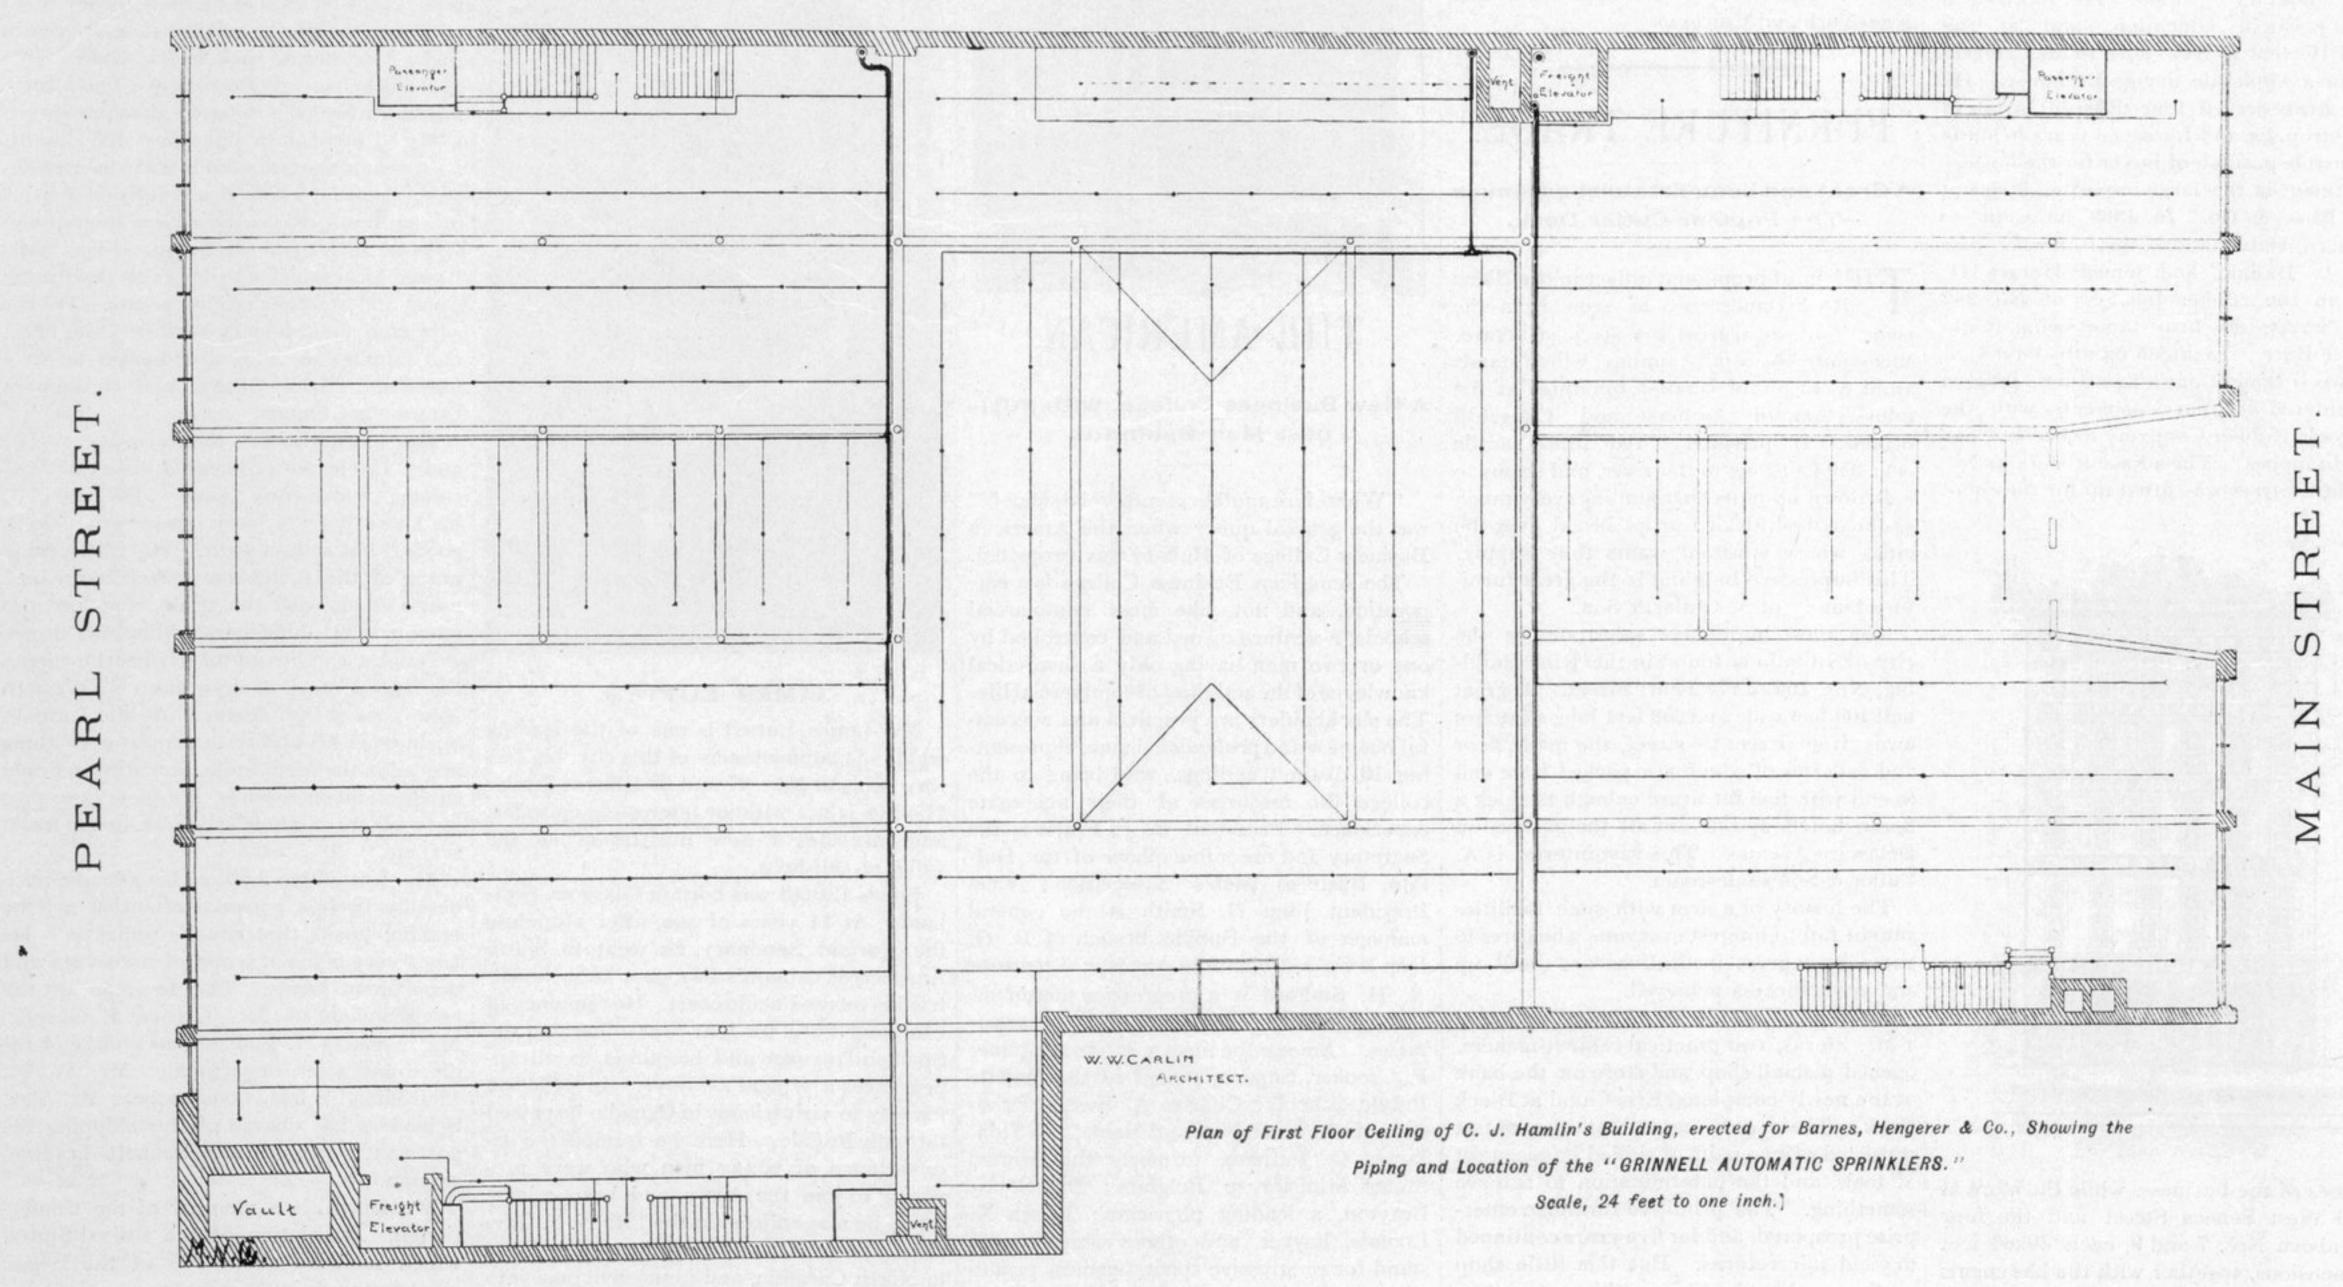

Mr. Gentsch has good business talents, but this is not all that may be said in his favor. In his office hangs a certificate, stating that he has served among the volunteer firemen of years past, and he is also remembered as an able member of the

A CURIOUS RELIC.

In THE EXPRESS exhibit at the International Fair is a Ramage printing-press, with frame of wood and bed of stone, exactly such a machine as Dr. Benjamin Franklin printed "Poor Richard's Almanac" on. Few printers of the present day have ever seen such a press. Its capacity is about 200 sheets an hour.

The Mey Patent Detachable Chain Belt is especially adapted for the transmission of power for driving machinery or for elevating or conveying grain, malt, feed, coal, coke, stone, asphalt, fertilizers, clay, etc.

Mr. Mey is also the inventor and manufacturer of a variety of mill and elevator Champion elevator buckets, conveyors, etc., a pound. for descriptions of which we have not space, Illustrated catalogues will be mailed to all interested parties who apply.

Mr. Mey's devices are unreservedly indorsed by the officers of the Buffalo Board of Trade and by most of the leading elevator men, millers, maltsters, coal dealers, brick manufacturers, insurance agents, etc., of this city.

Mr. Mey carries on his extensive business at Nos. 64 to 68 Columbia-street.

CANDY MAKING.

A Large and Thriving Industry in the City of Buffalo.

66 VES, Buffalo turns out more candy I in proportion to her size than any other city in the country," said a wholesale confectioner. "This city has a wide reputation for fine goods, too; that's why we take particular pains to stamp 'Buffalo Confectionery ' on our candy-boxes."

The pioneer in the candy-making industry here was probably John Benson, who was, at any rate, the first to begin the manufacture of candy on a large scale. He began business in 1846. Benson was succeeded by A. Van Slyke, and the latter was bought out by Henry Hearne, who was in business here till a few years ago, when he in turn was succeeded by Robinson &

With Henry Hearne many of Buffalo's confectioners learned their trade. James Lutted was in his employ, and so were both Sibley & Holmwood, who now do the largest business of any candy firm in the city, employing about 175 hands.

When Mr. Benson began business the peppermint-drop and the musk-lozenge reigned supreme, and the variety of candies was very limited. Perhaps there were not more than 30 or 40 kinds altogether. Steam was not used in the manufacture of candy, and not more than 35 or 40 people were employed, while candy that can be bought for seven or eight cents a pound now sold for 40 cents then.

It is estimated that the Buffalo houses now turn out 2,500 tons of candy a year, using 15,000 barrels of sugar. The trade is growing very fast, but the great reduction in the price of candy keeps the profits down.

Union through the efforts of the National Confectioners' Association. Buffalo confectioners are represented in the association by James Lutted and Sibley & Holmwood.

Buffalo has a pretty fair-sized sweet tooth, as it is estimated that \$150,000 worth of candy is eaten here every year, from the 7-cent mixed-candy to the imported crystalappliances, including elevator boots, Buffalo lized-flowers which can be had for \$3 or \$4

> There are in this city five manufacturing confectioners who do business on a large scale, besides several smaller firms.

OLD FAVORITES.

A House that Two Buffalo Generations Have Thought Well of.

NE of the oldest and most solidlyestablished mercantile firms in Buffalo is that of Flint & Kent, dealers in dry-goods, Nos. 261 and 263 Main Street. The business was founded in 1836, over half a century ago, by Dole & Howard. Successively thereafter the firm-name became Fitch & Howard, Howard & Coggswell, Howard & Whitcomb, Howard, Whitcomb & Co., Flint, Kent & Stone, Flint, Kent & Howard, Flint & Kent. Under the latter name the business has been carried on for 23 years, or since 1865. The senior partner, Mr. William B. Flint, died last December, since which time the business has been conducted solely by Mr. Henry M. Kent.

Throughout these many changes of proprietorship the business has continued without break or interruption, and for 32 years it has been conducted at the present stand. This year an enlargement was made, by taking in the adjoining store, 23 x 140, formerly occupied by Warner & Jennings. doubles the size and capacity of the store, and permits the addition of new departments and a considerable increase of stock.

The retail stock carried by Flint & Kent is one of the largest, and averages the best in quality, of any in the city. Its worth approximates \$175,000. This is exclusive of the stock in the wholesale department. The aim of the house through all its revolutions of regime has been to keep only goods of first-class quality, believing that customers are better suited with good goods at fair prices than with cheap goods at any figure. The house of Flint & Kent has thereby attained a reputation for realiability and excellence second to none. The clerks in its employ are trusty and experienced, many of them having been connected with the establishment for 20 or 30 years; scarcely an employee but has filled a term of from three to five years. It has been part of the firm's policy to keep salesmen in order to keep trade. There are about 40 employees on the list, many of them experts in their lines.

The present manager, Mr. Henry M. Kent, is a New-Englander by birth, possessing 48 years' experience in the drygoods business and unquestioned probity of character. Complete confidence is felt in the representations made by him and his assistants to the public, and few firms enjoy a better class of patronage or a larger share of custom than does the widelycelebrated house of Flint & Kent

SANITATION.

Its Practice as a Profession by Buffalo Firm.

CANITARY engineering has been the result of the labors of the inventors of the past 30 years. Prior to that time the condition of almost all the large cities was such that contagious diseases and epidemics were frequent, and the wonder was that they were not more so. The development of sanitary science has led to important improvements in the appliances employed by engineers and plumbers, and at the present time the sanitary precautions taken in the construction of the best buildings are such as were unheard of a few years ago.

One of the best known sanitary engineers, in Buffalo is Thomas Dark, the senior member of the firm of Thomas Dark & Sons. The members of this firm are Mr. Thomas Dark and his sons, George and Thomas, jr. They are natives of England. While in the old country, the elder Dark was extensively employed as a sanitary engineer and contractor.

When the Messrs. Dark started their business in Buffalo, contractors and builders were wont to erect their buildings with very little provision for securing the health of the future inmates. The beginning of operations by this firm marked the commencement of a new era in the building business. Thenceforth the builders were compelled to take steps to secure proper sanitation and drainage. Thomas Dark & Sons made a specialty of this branch of the business, and from that time until the present they have been entrusted with many important contracts for this kind of work. There is scarcely a large building in the city in which they have not been employed.

Besides being a practical engineer Mr. Thomas Dark, Sr., is also the inventor of several important sanitary appliances. He is the patentee of Dark's Patent Sewer Receiver and Stench Trap, an appliance which is considered the most effective of its kind, and which has been adopted by several of the large cities of the United States and Canada. Dark's Sewer Cleaning Machine is another of his inventions.

At the request of the Board of Health, Mr. Dark, in common with several other engineers, submitted a plan for ventilating the trunk sewer and consuming its gas. He has applied for a patent on this device. The Committee on Sewers, to which the matter was referred by the Common Council, reported in favor of Mr. Dark's plan in preference to any other. The Common Council adopted the report of the committee, but nothing has yet been done in the matter.

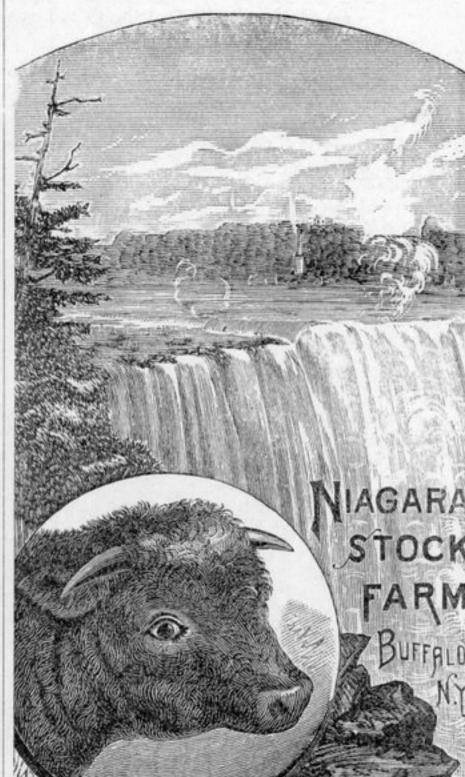

The senior member of the firm demonstrated his superiority as an engineer long before he came to this country. He was the managing engineer on several important public works in England.

When the improvement to the Buffalo Water-works was projected, his experience proved very valuable to him, and his plans, specifications, and estimates won him the first prize of \$2,000 offered for the most

feasible designs. During the past year this firm has built the Genesee-street sewer, and at present is occupied in the construction of the new bridge at Forest Lawn. While Thomas Dark & Sons have made a specialty of sewer and sanitary engineering, they are also contractors and builders. Some four years ago they added to their establishment a plumbing, gas-fitting, and tin-smithing department. The latter department was added at the instance of their numerous patrons, and has proved a great success. Taken all in all, the firm of Thomas Dark & Sons is one of the most enterprising in the city, and has done its full share in advancing the interests of Buffalo.

PROGRESS OF INVENTION.

The beautiful art of wood-engraving is one in which America excels the world. But recent improvements in photography have made wood-engraving almost useless. All of the portraits and most of the views in this "Extra Number" are direct photographic reproductions.

one load. To-day it would take more than ing trade became evident.

A. D. Baker. From small beginnings has arisen a splendid business, which has few superiors in Buffalo, either in quantity or quality of goods handled.

For many years Baker Bros. have made a special study of teas and coffees, and their large and increasing trade in these articles shows that their efforts to give the best possible value are appreciated. The extent, quality, and variety of their goods are well known, and their customers are recognized as among the best class of Buffalo's citizens.

APPETIZERS.

Manufacture is Carried On.

THE Vinegar and Pickle manufacturing establishment of which Mr. John L. procures his stock from the best factories Kimberley is proprietor, was founded in 1868, and has been in successful operation

The first factory occupied was on Hanover Street, whence the growth of the business required its removal to Chicago Street. In 1882 Mr. Kimberley took possession of the present plant, a group of buildings entirely covering a lot of 175 x 100 feet. Here from 20 to 25 workmen are employed, and

factured at the rate of about 50 barrels per day. The manufacture of pickles, one of the chief branches of the business, is managed on a grand scale. The entire pickle crops of about 200 acres of land in Niagara County (chiefly near Lockport and La Salle) are contracted for, and manufactured into every popular form of appetizer for the local and export trade.

The entire business of this house is with jobbers, and no retailing is done. Goods and quoted prices, that comparison may be are exported to the markets of New-York, Pennsylvania, Ohio, and even Indiana.

RUBBER GOODS.

A Great Trade Built Up in Rubber and Leather Specialties.

THE Buffalo Rubber Company was established in 1886 and is the outgrowth of the business established in 1873 by Mr. G. D. Barr. Mr. Barr was a practical which marks accurately the growth of of heavy rubber goods. He therefore

1853. N. H. Gardner & Co. carried on the Fair, in common with many other articles. In 1865 the senior member of the flourish- business prosperously for twenty years. It ing firm of Baker Brothers, Mr. W. H. was therefore a healthy and increasing busi- dries this company takes the lead, having Baker, offered his services to many grocers ness which was turned over to Mr. Barr in built up its trade by carrying the best goods in this city, and although willing to accept 1873. Until 1877 the business was carried of the most reliable manufacturers in the to learn the business, he was unable to Curtiss in the John T. Noye building on kind to be put in stock. This system has find the desired opening. Having decided, Washington Street. Subsequently the firm been pursued in every branch of the however, to engage in the trade, he bought removed to the Terrace in the large build- business.

204 and 205 Main Street, formerly occupied by W. H. Glenny, Sons & Co., was secured and after thorough refitting was occupied. The building was in fact substantially rebuilt for the use of the Rubber Company, and is now a seven-story structure, containing all of the conveniences of a modern business block. It is supplied with an electric-light plant, steam-heating apparatus, elevators, and all appliances necessary to the expeditious and economical handling

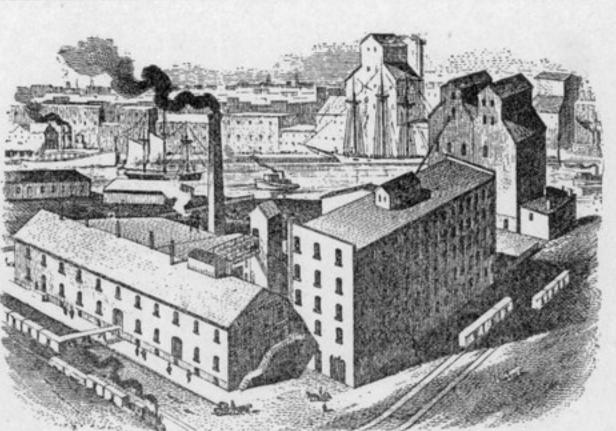

of a large trade. It is conceded by the trade that the Company has the bestappointed and best-arranged rubber store in the United States. This statement is not made with any desire to exaggerate, but simply as a well-attested fact. Besides selling its own goods, the Company acts as agent for two other companies, and therefore can supply any class of goods known to the trade.

The Goodyear India Rubber Glove Manufacturing Company and the Boston Its Manufacture is a Large Industry Belting Company are both represented by the Buffalo Rubber Co. The Goodyear India Rubber Glove Manufacturing Company is acknowledged by those conversant with the subject to manufacture the finest an extensive wholesale trade is carried on. goods in its line in the country. The Good-Cider and white-wine vinegars are manu- year Company's boots and shoes are recognized as the best, and it frequently happens that the demand for them in a given place is greater than for all other kinds combined.

> The Boston Belting Company makes a specialty of rubber belting for machinery and of every description of rubber goods for mechanical and manufacturing purposes. The effectiveness and durability of machinery is largely dependent upon the quality of the belting. A belt which stretches or comes off is not only an annoyance and a time-waster, but it racks the machinery and wastes the power. The Boston Belting Company has long been recognized as the manufacturer of the highest grade of rubber belting known, belting which embodies all the requisites of durability, firmness, and tenacity. Mr. Barr's house has for some time been the agent for this company, and the trade which he has done in rubber belting has been so large as to give him practically the main business of the city and vicinity. With but one exception, every elevator put up in Buffalo in the last five years has been supplied with the Boston Belting Company's belt, and there is yet to be received a single complaint relative to Wilkeson Elevator is to be supplied with belting of this manufacture, and several elevators which are replacing their old belting will do so with the belt of the Boston Belting Co. Mr. Barr will have this belting on exhibition at the International

LINSEED OIL.

in Buffalo.

NE of the many manufactories attracted to Buffalo by her unexcelled shipping facilities, and which have done much to build up that portion of lower Buffalo known as "The Island," is the linseed-oil works of The Kellogg-McDougall Linseed Oil Company, a corporation which has succeeded the firm of Kellogg & McDougall. The works were established in 1879 by Spencer Kellogg and Sidney McDougall. They are admirably situated for transportation facilities, on Hatch Slip, Ganson Street, and the Buffalo Creek Railway. When first established the works consisted of a linseed-oil mill alone, and the amount of seed used was 350 bushels a day. The business has now developed to the consumption of 1,600 bushels of seed a day, and a daily output of 80 barrels of oil and 30 tons of flaxseed cake. A broom factory has been added to the plant within the past few years, and an oil, paint, and varnish works has been established on Elk Street just east of the Atlas Refinery within the

The plant of the linseed-oil works on Ganson Street is pictured in the accompanying cut. It covers an area of about two and a half acres, has a water front of 200 feet, and comprises seven buildings: the oil mill, a storage-transfer elevator, a seed store-house, tank-houses, broom factory, bleach-house for broom-corn, and engine-house.

The elevator has a capacity for elevating about 8,000 bushels an hour, and a storage capacity of 50,000 bushels. One hundred thousand bushels of seed can be stored on the premises, and generally 200,000 bushels more are stored in outside elevators to supply the mill through the winter. Power is furnished by three engines: one for the elevator, one for the mill, and a third for the broom factory. Seed is brought by lake propellers to the slip on one side; oil and seed-cake are shipped by the railroad on the other. Most of the flaxseed comes from the West. A member of the Chicago Board of Trade acts as agent and buys seed from farmers in Dakota, Minnesota, Kansas, and Nebraska. When the domestic crop is short, Indian seed is imported from Calcutta. The process of making linseed oil consists chiefly in the application of a severe hydraulic pressure (400 tons) to the raw seed. This work is done entirely by machinery, as is also the case in the handling of the material and the products. The products which issue are oil and seed-cake. The oil is cleansed and furnishes the chief ingredient of paints, varnishes, etc. The cake is nutritious food for cattle.

The Kellogg-McDougall oil-works sell their oil in all quarters of the globe. About all the linseed-oil used in Buffalo is made by them. The seed-cake is little used by American farmers, who do not seem to appreciate its value. Ninety per cent of this output is exported in cake to England and placed by a London agent retained on salary by the Kellogg-McDougall Oil Company. The other tenth is ground and sold for home consumption. It is very fattening, containing a large percentage of albumen. England consumes about 750,-000 pounds of it annually; the United States about 5,000 pounds. Eight agents are employed by the company in this country selling oil and brooms.

The manufacture of linseed oil is a process demanding skillful treatment to secure fine results. Mr. Kellogg is a practical chemist, and possesses a life-long experience in oil-making, his grandfather having been a manufacturer in the East and having taught him the business. A laboratory is located on the premises, where experiments are conducted. By a process which Mr. Kellogg has just perfected, after labors extending over a period of four years, a finer grade of oil is being made than any other on the market. Two grades of linseed oil are recognized: Domestic and Calcutta, the latter made from imported seed and considered superior because the seed is dryer and gives less moisture to the oil. Mr. Kellogg has developed a third grade, which he calls "aged oil," which possesses the clearness and purity of oil in which all foreign matters have been precipitated and drawn off. This clarifying or "aging" process is conducted at the Oil, Paint, and Varnish Works on Elk Street, which are just opened. The oil is transported from the mill to the Elk-street works by the Buffalo Creek Railway, which connects the two plants. Eventually fine paints and varnishes will be made from "aged oil," and it is expected they will secure eventual supremacy with the trade. This "aged oil" is now sold to oil-cloth and patent-leather manufacturers, and is meeting with great favor in the market as far as introduced. This branch of the oil-company's works is yet in its infancy. Much may be anticipated from it.

tion, though managed by the same company. The factory is supplied throughout with machinery having a capacity of 250 dozen brooms a day. The broomcorn is obtained from Illinois, Kansas, and Nebraska, and is bought in car-load lots. One hundred and twenty-five hands are employed in this factory. The output is sold in small orders throughout the States. It may thus be seen in this brief review of the works of the Linseed Oil Company that this industry is one of the most prominent interests of the city, though less talked about than some others. It is one of the largest mills of its kind in the country. and its pre-eminence is established by the quality of its products superinduced by intelligent and careful management. Nothing is needed to insure the continued prosperity of this concern except the retention of a Protective Tariff which shall stimulate the raising of domestic seed and the purchase of home-made oils.

The broom factory is a separate institu-

"LITTLE JAMIE."

The above charming and life-like picture is from the label of the "Little Jamie" cigars, a brand introduced by E. L. Winship, the widely known and extensive wholesale and retail dealer at No. 11 Terrace, Buffalo. The delicacy of the execution of the portrait corresponds well with the fine work manifested in the goods themselves. This cigar has obtained great popularity; in fact, no other cigar offered in Western New-York at its price has had equal success. With Sumatra wrapper and Havana filler, it is an honest, pure article, made with perfect care and cleanliness by operatives of the first class. It is a five-cent cigar—two dollars per box. It disproves completely the allegation heretofore made by many smokers that one not rank and coarse could not be bought for that money. On the contrary, it may be truthfully asserted, and in the smoking will be found the immediate proof, -a cigar to please the tastes of the most fastidious. It is unquestionably a better product than nine tenths of the goods union sale by many dealers, and may be had and Conchas. in any quantity, as well as all other smokers'

J. P. AMES & CO.

Manufacturers of Spanish-made Cigars, Ogdensburg, N. Y.

AVING become possessed of this short space in Buffalo's Souvenir Number, and business being fairly under way, we take pleasure in saying that our manufacture of Spanish-made cigars is of sufficient

importance to describe. After months of careful search we secured the most select Havanas from the Vuelta Abajo districts, also a number of fine Cuban cigar-makers, and at once began operating as do some factories in New-York. We had confidence that with our facilities that it burns evenly and is of grateful flavor in the manufacture, and with our accommodations for receiving and shipping merchandise, we must attain the same high position as our competitors of New-York. versally retailed at ten cents. COPPER TEA KETTLES, URNS, CUSPADORES, DIPPERS, Etc. AND WORKS: Black Rock, BUFFALO, N. Y.

Crocker Fertilizer and Chemical Co.

View of Works, Babcock Street, East Buffalo, N. Y.

In the very front rank of the manufacturing industries of Buffalo is the CROCKER FERTI-LIZER AND CHEMICAL WORKS. This business was founded in the year 1873, and has in the 15 years of its existence assumed proportions so vast as to make it a credit to the enterprise of our city. The works occupy about 12 acres, seven of which are covered by the buildings. The main building is 700 feet long, and attached to it are several large annexes. There are also three acid houses, detached from the main building. The last of these was built in 1887, and is a very fine structure, imposing in appearance and capacious and well arranged in its interior. This building is seen in the above view, away to the left-hand corner of the group. A fine addition to the main building was erected this year, and is fitted up with new machinery having the latest improvements for the manipulation of fertilizer material.

On the whole, the Crocker Factory as it now stands is among, if not at the head of, the bestappointed fertilizer factories in the country. The output of manufactured fertilizers is immense, shipments being made to agents covering almost every acre of tillage ground embraced in the territory between Maine and Kentucky and Michigan to Maryland.

To those unacquainted with the nature of this industry, a visit to the Crocker Factory would be a first-class surprise. Pile after pile of the different grades of the manufactured article are to be seen, and the quantity is so immense as to produce on the uninitiated an impression that it would take a long period of time to get it all bagged and shipped. Then pile upon pile of bagged goods ready for shipment are seen, while at other points loom up hundreds of tons of animal blood, dried and ground, somewhat resembling gunpowder in appearance. Again are seen huge heaps of animal meat and bones, dried and ground to fine powder. Still further, piles of bones-skulls, shanks, knuckles, etc., all perfectly clean and dry, ready for the bone mills; heaps of potash; sheds full of brimstone and nitrate of soda, used in the manufacture of acid; and, finally, hundreds of men hurrying to and fro engaged in all kinds of work-weighing, bagging, wheeling, carting, loading, and unloading trains of cars, etc., making the whole scene one of bewildering activity.

From here we pass into the power rooms, where are several large engines and boilers from which the motive power is distributed all through the buildings. Attached to these rooms are the carpenters' shop and smithy, both busy places in themselves. Next we pass on to the acidhouse, and still surprises are in store for us. The leaden tanks or chambers in which the acid is condensed are of such immense size as to make one wonder how so much lead could be soldered and held together. The acid-refining house is a separate building, and here may be seen the refining process, filling tanks, carboys, etc. The company have a large trade in acid apart from the fertilizer business, and run their own railroad tank cars.

Reverting to the merits of the fertilizers manufactured by the Crocker Company, it is safe to say that they have made a reputation for Buffalo throughout the land. "Crocker's Honest Buffalo Phosphate" is now a household word in the farming community, and well has it been deserved.

Starting in at a period in the history of fertilizer manufacture when the American farmer knew little of the difference between one brand of superphosphate and another, and oftener than not was made the victim of "misplaced confidence" in this, that, and the other compound which was forced upon him, the founders of the business saw a need to be supplied, and seized the opportunity to supply it. Forthwith was commenced the manufacture of a fertilizer about which there would be no possible deception. A high grade was decided upon; the best materials obtainable were chosen; and under no circumstances was there to be a bag of goods sent out that did not contain the full percentage of plant-food guaranteed. To carry out this fixed purpose, communications were opened at once with the great slaughtering houses in the West. Contracts were made, covering long periods, for the blood, bones, and refuse meat product of the principal houses. Buildings and machinery were also put up at some points by the home house for curing and manipulating the material, and these served as additional supply branches of the Buffalo works. From that time till now Buffalo may be said to have had a monopoly of this best of fertilizer material known to agricultural chemists.

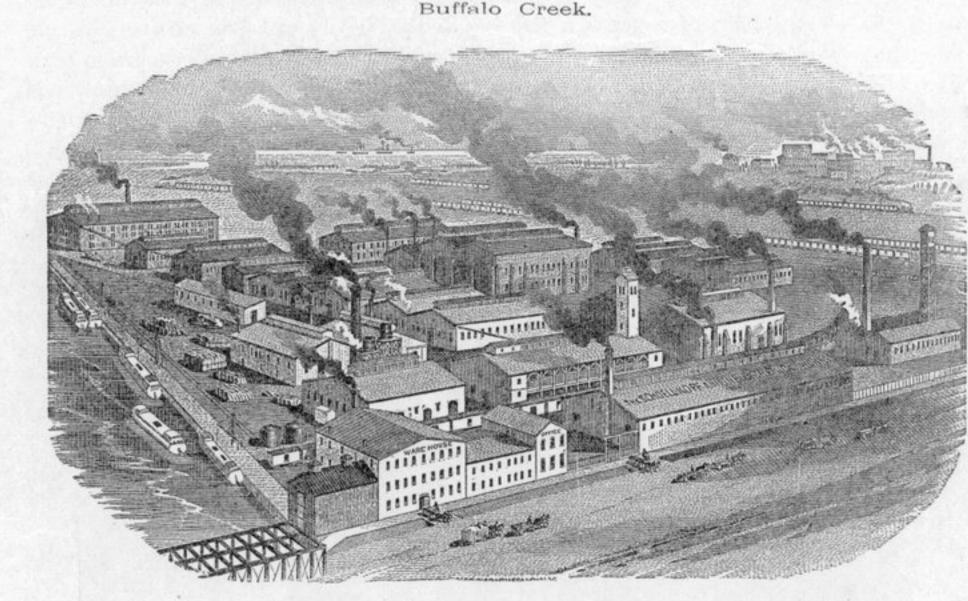

Timid at first, on account of having been deceived so often with valueless compounds sold for fertilizers, farmers were slow to try new goods. The first season's trade was small; but immediately it was found that the goods gave an account of themselves equal to what was promised, the demand increased so rapidly as to make immediate extensions of the works necessary. Season after season the increase in sales has kept up, until to-day the output of the Crocker Factory in purely high-grade goods is larger than that of any other establishment in the same line in the country. Honest goods and honorable straight-forward dealing, together with a thorough knowledge of the business and a complete mastery of details on the part of the management, are the secrets of the success of this great concern.

The officers of the company are: President and General Manager, E. A. Becker; Vicepresident and Treasurer, James R. Smith; Secretary, John F. Smith; Board of Directors, E. A. Becker, James R. Smith, Pascal P. Pratt, H. G. Nolton, William H. Walker, Chas. A. Sweet, Edmund Hayes.

Manufacturers of Coal Tar Dyes-Office and Works, Abbott Road and

· · · · COMPANY · · · ·

O discovery of the present age has had greater influence upon textile manufactures I than that of the chemical properties of coal tar, from which are obtained many of the most brilliant dyes now employed. Not only has this discovery affected beneficially the beauty of all goods worn in our time, but the prices have been greatly reduced thereby on all fabrics, and thousands hitherto debarred by want of means from indulging their taste for texture and color are now enabled to revel in all the hues of the rainbow and in the richest weaves, because of the cheapening of materials and processes directly or indirectly brought about as the near or remote consequences of the introduction of aniline dyes.

The Schoellkopf Aniline and Chemical Company's works for the production of these dyes are the most extensive of the kind on this continent, and their reputation for highgrade dyes is unsurpassed by that of any similar concern in the world. These works, at the intersection of the Abbott road and Buffalo creek, were erected by Mr. J. F. Schoellkopf, one of Buffalo's most conspicuous citizens and business men, in 1879, and have since been greatly enlarged and improved. The company as it now exists was organized and incorporated in 1881 with a working capital of \$350,000, with J. F. Schoellkopf, president, who is also actively interested in many other important business enterprises including the manufacture of leather, brewing, milling, etc., and director of several leading corporations and banking houses. He has resided in Buffalo for fifty years, and has done as much as any other one man toward developing her material interests.

The aniline and chemical works occupy a most favorable location with reference to the delivery of materials and the shipment of finished products. The plant embraces about six acres of land, upon which have been erected 22 distinct one, two, and threestory substantial brick buildings, equipped in every department with the best and latest improved machinery and apparatus, several powerful steam engines, and everything required to render the establishment complete. One hundred and sixty men are employed, and wages are paid to the amount of \$7,000 monthly. The shipping facilities are all that could be desired, and embrace, besides the Erie Canal, which bounds the works on one side, switches and side-tracks from the Lackawanna, Nickel-Plate, and Buffalo Creek railroads, the latter communicating directly with all roads entering the city. The sales made-principally to the cotton, woolen, and silk manufacturers of the East, aggregate \$500,000 per annum.

There are many shades of each standard color, as all are aware, as reds, violets, blues, yellows, oranges, browns, scarlets, etc., and it requires a high degree of skill in chemistry and mechanics to produce these of satisfactory character as regards brilliancy and durability: hence the necessity for employing the best talent procurable. All processes are of course secret, and the company own patents upon some of the colors, not a few of which were devised by their own accomplished head-chemist, Dr. Koehler. This house manufactures all the colors and shades required by dyers, together with various acids and salts for the trade.

The company make a specialty of dealing direct with consumers, and for the convenience of their many customers they have established selling agencies at

GIES & CO.'S LITHOGRAPHING, PRINTING, AND ENGRAVING ESTABLISHMENT, COR. SWAN AND CENTER STS., BUFFALO, N. Y.

PRINTING TRADE.

Its Various Branches Under is splendidly lighted and arranged, One Roof.

An Extensive and Remarkably Complete Buffalo Concern.

Comparatively few Buffalonians are aware of the extent of the business carried on by the great printing and lithographing house of Gies & Co. in this city. Their splendid establishment, a substantial brick and stone block at the corner of Swan and Center streets, is well shown in the accompanying illustration, as is also their paper warehouse on Carroll Street. This establishment has not only grown with Buffalo and felt the influence of the "boom," but its products in turn boom the railroads, and the various home industries; they go north, south, east, and west, and spread the fame of Buffalo wherever they are found.

In this building, containing nearly 45,000 square feet of floor space, are carried on the various processes of book and job printing, lithographing, wood-engraving, electrotyping, etc. The firm have long had a high reputation as lithographers, in which business they started in 1874. In the rapid growth it was found necessary to add book and job-printing departments, and in fact to maintain a complete establishment. The head of the firm, Mr. Charles Gies, has been in the business 33 years, and had not only a practical knowledge of the various details, but experience had taught him how to lay out a is the result in this establishment that printers and lithographers from other cities who contemplate building frequently come to Buffalo and which for completeness and convenience may well be taken as a model.

Starting in a small way, a few years ago, in the job-printing department, the firm has gradually come to make a specialty of fine illustrated catalogue and pamphlet work, and has developed as large and complete a printing establishment as there is in the State. In the job-press-room, which occupies the first floor of the rear extension, and is 60 by 110 feet in dimensions, are eleven power presses, nine of them cylinders, and all of Hoe's latest make. To excel in the class of work for which this firm has won a high reputation, expert pressmen are required - men thoroughly familiar not only with the running of presses, but with the "over-laying" and other steps of "making ready" for fine press-work. employed.

one of the finest in the country. It the best is sent out. type. To correspond with their artistic work in other departments, the display type-work is required to be as artistic and attractive as the most accomplished compositors can

the type-working department is its they cannot equal on the stone - a association with the artistic facilities of the lithographing department, as by sad experience; yet so expert are can be readily seen. In lithography this firm's work is so well and widely known that little need be said of it. Its fine color-work has a national reputation; it is conceded to do some of the finest color-work known to the trade, and few firms undertake to compete with it. Its reputation for lithographic office stationery is unrivalled. It draws work of this class from the largest cities, even from New-York, Cincinnati, and other famous lithographing centers, and probably does more office stationery work than any other house in the United States.

The secret of this great success lies in experience, in the employment of first-class workmen, and in careful attention to every order in all

of its details. The lithographic press-room, on the second floor of the rear extenimprovements. The Best Equipped Plant in America for the manufacture of Modern Marine Boilers.

WITH THE REVIVAL OF SHIP BUILDING ON THE LAKES, CAME the necessity for improvement in machinery and tools for the construction of large Marine Boilers. Messrs. Hammond & Coon, proprietors of the Lake Erie Boiler Works, at Buffalo, were of the first to lay out a large sum of money in extending their plant, and that the Lake Erie Boiler Works has the best equipped plant in America for the manufacture of Modern Marine Boilers is admitted by the best engineers in the United States. During the year ending July 31, 1888, these works have turned out 47 large MARINE BOILERS, of an average weight of 32 tons each. In addition to this vast amount of Marine Work the Lake Erie Boiler Works build STATIONARY and PORTABLE BOILERS, OIL STILLS, IRON TANKS, GAS HOLDERS, and general Plate-iron Work, and in this class of work turned out, during the same period, an aggregate weight of more than 2,300 tons.

BICKFORD & FRANCIS.

"B. C. & D." BRAND Strictly Short-Lap, Pure Oak-Tanned

Patent Round-Corner Laps. The Best in the World. We challenge any manufacturer in the world to produce Belting superior to our "B. C. & D." Brand Belt. Write for prices.

BUFFALO, N. Y.

We are aware of the prices offered by various makers of oak-tanned belting, and we can furnish grades to meet any competition; but it is not economy to be governed entirely by price in purchasing belt. The best is the cheapest. We can make from 30 per cent. to 40 per cent. more belting from a given lot of leather, where price is the consideration, than where it is of the first importance to make a perfect belt, and yet both will look equally well to most men; but in buying the

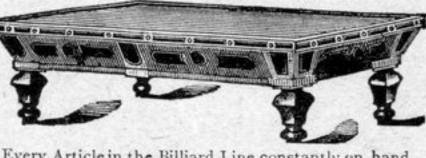

out and stretch our leather in narrower strips than other makers, thus making more waste, which does not show in the manufactured belt, but becomes very apparent when put into use. If you want our belting, call for it, and don't be put off by accepting an inferior article. Any deater can get it for you, if you insist upon having it. You can, however, order direct from factory, and all orders will have prompt attention and shipment. We make a specialty of large driving belts, and can furnish promptly all kinds of single and double belting from ½ inch to 64 inches wide. We would like your order for a trial of our belt in the hardest place you have; then, if we suit in price and quality, we would like your trade. We carry a full line of the best quality

at lowest market prices.

The men and the womenthat is, the organization. It deals in all sorts of things that go well together-dry-goods and carpets, upholstery and drapery, millinery and shoes. No one man can take in the whole range of its merchandise. It needs a head for each department, and then a head for each division, and buyers back of the whole, and a management with an active, vital connection all the way down. The buyers must know goods. The management must know buyers, sellers, and goods. The sellers must know people, their wants and tastes and requirements, as well as goods. Ig- *TAILORS* norant customers must be taught. The sellers must do for them what they wouldn't 14 West Eagle Street, -do for themselves, and the head of the whole must teach organization; the individuality—the spirit; the association

Building and organization stand for merchandise. Stocks big enough to draw customers from the country over, because they supply their wants, buying from the maker, facing but one responsibility, knowledge of wearing qualities, fashions, changes, and makes, standing squarely for the best without knowing all, because of confidence in its buyers, TILLIAM COULSON, giving the best in the world for the money, facing losses trade the year round.

service and accepts cheerfully such profits as come in the way of diligent and faithful helpfulness.
